[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

PETROLEUM AND COAL PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2911--Petroleum Refining
2951--Paving Mixtures and Blocks
2952--Asphalt Felts and Coatings
2992--Lubricating Oils and Greases
2999--Products of Petroleum and Coal, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2911--PETROLEUM REFINING

This industry comprises establishments primarily engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, and other products from crude petroleum and its fractionation products through straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking or other processes. Establishments primarily engaged in producing natural gasoline from natural gas are classified in mining industries. For a detailed list of products of industry 2911, refer to table 6A, product codes 2911111 to 2911951.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Petroleum Refining Industry in 1967 totaled $20,293.9 million. This included shipments of petroleum refinery products (primary products), valued at $19,147.9 million, shipments of other products (secondary products) valued at $374.0 million, and miscellaneous receipts of $772.0 million.

This industry's shipments of petroleum refinery products (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 98 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals ($130 million), and cyclic intermediate chemicals ($61 million).

Industry 2911 shipments of petroleum refinery products (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $19,691.9 million shipped by all industries. In 1963, the coverage ratio was 97 percent.

Lubricating oils, lubricating oil base stocks, and lubricating greases are not only produced by petroleum refineries but are also produced from purchased materials by plants blending and compounding lubricants and classified in industry 2992, Lubricating Oils and Greases. Plants classified in industries 2911 and 2992 shipped substantially all of the lubricating oils and greases valued at $1,327.0 million, with industry 2911 accounting for 67 percent.

Oils are frequently transferred from one refinery to another for further processing and blending. This introduces some duplications in the "Value of products shipped" by the Petroleum Refining Industry, as shown in tables 1, 2, 3, 4, and 5. To eliminate duplication in the statistics for individual products, figures were collected on the amount of oil received by refineries during the year. Net (unduplicated) shipments were calculated, for the United States as a whole, by subtracting "Receipts" from the quantity shipped (see table 6A). These net shipments represent the quantity of petroleum products made available for consumption by the "Petroleum Refining" and "Lubricating Oils and Greases" Industries.

Industry 2911 also includes establishments primarily engaged in the production of petroleum based chemicals (petrochemicals). Detailed product statistics for liquefied refinery gases used as chemical raw material were not collected since these data are reported to the United States Tariff Commission and published in the report "Synthetic Organic Chemicals, United States Production and Sales."

Unlike most manufacturing industries where the receipts for contract work are reported as such, plants in industry 2911 processing oil on a contract basis for other companies were requested to report the commercial cost of all materials received and the market values, f.o.b. plant, for the products shipped.

Petroleum product statistics shown in this report are not directly comparable with the Bureau of Mines figures published in the Mineral Yearbook. The census of manufactures collects data on shipments, whereas the Bureau of Mines figures are in terms of "output" (production).

Data showing net shipments of gas liquids and related products covered in the 1967 economic censuses appear in the reports for the 1967 Census of Mineral Industries. Table 7A contains data showing the consumption of selected materials. Other data relating to "inputs" of materials appear as "receipts" in table 6A.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2911, these establishments accounted for approximately 0.01 percent of payroll and value added by manufacture.

2951--PAVING MIXTURES AND BLOCKS

This industry comprises establishments primarily engaged in manufacturing asphalt and tar paving mixtures; and paving blocks made of asphalt, creosoted wood, and various compositions of asphalt or tar with other materials. Establishments primarily engaged in manufacturing brick, concrete, granite, and stone paving blocks are classified in major group 32. For a detailed list of products of industry 2951, refer to table 6A, product codes 2951011 to 2951098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Paving Mixtures and Blocks Industry in 1967 totaled $584.6 million. This included shipments of paving mixtures and blocks (primary products), valued at $505.4 million, shipments of other products (secondary products) valued at $39.3 million, and miscellaneous receipts of $39.9 million.

This industry's shipments of paving mixtures and blocks (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of ready-mixed concrete ($11.5 million), and sand and gravel ($7.0 million).

Industry 2951 shipments of paving mixtures and blocks (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $529.6 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping paving mixtures and blocks (primary products) consisted mainly of industry 3273, Ready-Mixed Concrete, $12.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2951, these establishments accounted for 3.0 percent of payroll and value added by manufacture.

2952--ASPHALT FELTS AND COATINGS

This industry comprises establishments primarily engaged in manufacturing asphalt and other saturated roofing felts in roll or shingle form, either smooth or faced with grit, and in manufacturing roofing cements and coatings. Establishments primarily engaged in manufacturing paint are classified in industry 2851. For a detailed list of products of industry 2952, refer to table 6A, product codes 2952111 to 2952398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Asphalt Felts and Coatings Industry in 1967 totaled $597.8 million. This included shipments of asphalt felts and coatings (primary products), valued at $492.8 million, shipments of other products (secondary products) valued at $48.2 million, and miscellaneous receipts of $56.8 million.

This industry's shipments of asphalt felts and coatings (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of asbestos products ($20.6 million).

Industry 2952 shipments of asphalt felts and coatings (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $519.4 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping asphalt felts and coatings (primary products) consisted mainly of industry 2851, Paints and Allied Products, $5.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics estimated from industry averages. For industry 2952, these establishments accounted for approximately 2.0 percent of payroll and value added by manufacture.

2992--LUBRICATING OILS AND GREASES

This industry comprises establishments primarily engaged in blending and compounding lubricating oils and greases from purchased mineral, animal and vegetable materials. Petroleum refineries engaged in the production of lubricating oils and greases are classified in industry 2911. For a detailed list of products of industry 2992, refer to table 6A, product codes 2992000 to 2992031.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Lubricating Oils and Greases Industry in 1967 totaled $487.3 million. This included shipments of lubricating oils and greases (primary products), valued at $425.7 million, shipments of other products (secondary products) valued at $25.3 million, and miscellaneous receipts of $36.3 million.

This industry's shipments of lubricating oils and greases (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of chemical preparations, n.e.c., ($5.7 million).

Industry 2992 shipments of lubricating oils and greases (primary products) in 1967 represented 32 percent (coverage ratio) of these products valued at $1,327.0 million shipped by all industries. In 1963, the coverage ratio was 33 percent. However, lubricating oils and greases are also primary to industry 2911, Petroleum Refining. A coverage ratio computed on the basis of including both industries to which lubricating oils and greases are primary would total 99 percent in 1967. Lubricating oils and greases (primary products) shipped by industry 2911, Petroleum Refining, totaled $883.7 million. Other industries shipping lubricating oils and greases consisted mainly of industry 2841, Soap and Detergents, $3.5 million; and industry 2899, Chemical Preparations, N.E.C., $3.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2992, these establishments accounted for approximately 2.0 percent of payroll and 1.5 percent of value added by manufacture

2999--PRODUCTS OF PETROLEUM AND COAL, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing fuel briquettes, boulets, packaged fuel, powdered fuel, and other products of petroleum and coal, not elsewhere classified. For a detailed list of products of industry 2999, refer to table 6A, product codes 2999015 to 2999098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Petroleum and Coal Products, N.E.C., Industry in 1967 totaled $79.8 million. This included shipments of petroleum and coal products, n.e.c. (primary products), valued at $73.5 million, shipments of other products (secondary products) valued at $.4 million, and miscellaneous receipts of $5.9 million.

This industry's shipments of petroleum and coal products, n.e.c. (primary products) in 1967 represented 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 96 percent.

Industry 2999 shipments of petroleum and coal products, n.e.c. (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $79.6 million shipped by all industries. In 1963, the coverage ratio was 91 percent.

The figures for fuel briquets and packaged fuel appearing in this report exclude the quantities and amounts shipped by establishments producing wood charcoal briquets (industry 2861) as well as establishments classified in nonmanufacturing industries. They, therefore, differ from the figures published by the Bureau of Mines, United States Department of Interior, in the Minerals Yearbook which includes data for nonmanufacturing establishments such as retail or wholesale coal yards and public utilities which produce some fuel briquets as a secondary activity. The census figures for fuel briquets also include information for briquets made from charcoal and sawdust, data for which are omitted by the Bureau of Mines.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2999, these establishments accounted for approximately 3.0 percent of payroll and 2.0 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 2911 was 276, 266, and 289, respectively; in industry 2951: 553, 528, and 415; industry 2952: 115, 126, and 119: industry 2992: 256, 311, and 284; industry 2999: 38, 59, and 74. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]The proportion of product shipments (both primary and secondary of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]Included in the coverage ratio shown for this industry are lubricating oils and greases which are also primary to Industry 2911, Petroleum Refining. A 1967 coverage ratio computed on the basis of including both industries to which lubricating oils and greases are primary would total 99 percent: 67 percent by industry 2911, and 32 percent by industry 2992. The remaining 1 percent was shipped by establishments in other industries. Computed on the basis of excluding industry 2911, the 1967 coverage ratio is 96 percent for industry 2992.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. [1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1] Includes lubricating oils and greases which are also primary to industry 2992, Lubricating Oils and Greases.

[2] Included in the figures shown for this industry are lubricating oils and greases which are also primary to industry 2911, Petroleum Refining. A 1967 coverage ratio computed on the basis of including both industries to which lubricating oils and greases are primary would total 99 percent; 67 percent by industry 2911, and 32 percent by industry 2992. The remaining 1 percent was shipped by establishments in other industries. Computed on the basis of excluding industry 2911, the 1967 coverage ratio is 96 percent for industry 2992.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. e From 10 to 30 percent of this figure was estimated. (S) Does not meet publication standards.

[1] Reporting companies were requested to classify items in the same manner as billed by the shipper regardless of how the refinery (or blending and compounding establishments) would otherwise classify them.

[2] Represents the difference between "Total shipments" (Quantity) and "Receipts" (Quantity).

[3] Includes all finished gasolines (other than aviation and automotive gasoline), finished base stocks, and blending agents such as alkylate, polymers (dimer, codimer, etc.), hydropolymers (hydrodimer, hydrocodimer, etc.) cumene, isopetane, isohexane, neohexane, isoheptane, iso-octane, motor benzol (benzene), and other blending agents derived from petroleum (excludes natural gasoline).

[4] Code 2911198 included with code 2911131 for 1967.

[5] Detailed product statistics for liquefied gases used as chemical raw material are published by the United States Tariff Commission in the report "Synthetic Organic Chemicals, United States Production and Sales."

[6] Although respondents were requested to report receipts in the same manner as billed by the shipper, the figures indicate that items billed as other oils by the shipper were sometimes reported as receipts of "unfinished oils" or "lubricating oil base stock" for the refinery receiving these oils.

[7] Includes such products as cracking stock, unfinished gasoline, requiring further distillation, naphtha stocks, soaps, wax distillate, and other unfinished petroleum oils. Excludes lubricating oil base stocks, natural gasoline and cycle condensates.

Footnotes continued on nex page.

Footnotes for Table 6A--29A--Continued

[8]Includes light, medium, neutral, heavy neutral, and residual stocks.
[9]Includes flux for paving, roofing, waterproofing, mastic, and other purposes; cut-back asphalt, emulsified asphalt and fluxes made in petroleum refineries, and other liquid asphaltic products except road oil and fuel oil used for heating purposes.
[10]Includes asphalt for paving, roofing, waterproofing, briquetting, mastic, pipe coating, molding composition, and other heavy asphalt products.
[11]The 1963 figure, which was previously published in quantities of thousand tons have been converted to thousand barrels on the basis of 5.5 barrels to the ton.
[12]Product codes 2911000 and 2911002 included in figure for code 29110.
[13]Represents residual asphaltic oil used for surface treatment of road and highways.
[14]Includes petroleum ether, rubber solvent, mineral spirits (petroleum spirits), varnish makers' and painters' naphtha, high-solvency naphtha, benzol diluent, lacquer diluent, cleaners' naphtha, stoddard solvent, extraction solvents, and other petroleum distillates shipped as solvents.
[15]Represents amorphous paraffin of melting point not under 145°.
[16]Includes oils for lubricating purposes and such nonlubrication purposes as transformer oil, hydraulic oil, processing oil, quenching oil, and liquid rust preventative.
[17]Includes greases for aviation, automotive, industrial, and railroad uses; launching grease, and cutting, drawing, and grinding compounds and paste. Also includes paste rust-preventative compounds and thread compounds.
[18]Excludes data for quantities produced in petroleum refineries, which are included in the statistics for code 2911911, asphalt of 200 penetration and over, in industry 2911, Petroleum Refining.
[19]Code 29522 31 combined with code 29522 98 to avoid disclosing figures for individual companies.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

[1] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Rubber and Plastics Products, N.E.C.

30A Rubber and miscellaneous plastics products

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries. This group also includes establishments manufacturing or rebuilding retreaded tires, but automobile tire repair shops engaged in recapping and retreading automobile tires are classified in services. Major Group 30 also includes establishments engaged in molding primary plastics for the trade and manufacturing miscellaneous finished plastics products. The manufacture of elastic webbing is classified in Major Group 22; products made of elastic webbing and garments made from rubberized fabrics in Major Group 23; synthetic rubber in industry 2822; and plastics materials in the form of sheets, rods, tubes, granules, powders, and liquids in industry 2821.

[1]The figures for 1939 to 1967 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which data for such employees were included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]Based upon the 1957 revisions of the Standard Industrial Classification Manual, establishments engaged in molding plastics products for the trade and fabricating miscellaneous finished plastics products were reclassified from Major Group 39, Miscellaneous manufacturing industries to Major Group 30. Data for years prior to 1958 exclude data for plastic products.

[6]In addition to data for operating establishments 1954, 1958, 1963, and 1967 figures are shown for manufacturer's central administrative offices and auxiliary units. Similar data are shown for the years 1949 to 1953, 1955 to 1957, 1959 to 1962, and 1964 to 1966 in annual survey of manufactures volumes. Data for these units are not available for the years prior to 1949.

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[8]The figures for 1925 to 1967, but not for earlier years, include data for establishments primarily engaged in manufacture of rubber cement and rubber toy ballons. Value added by manufacture for 1925, excluding data for these estal lishments and on a basis comparable with earlier years, was $536.6 million.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3011--Tires and Inner Tubes
3021--Rubber Footwear
3031--Reclaimed Rubber
3069--Fabricated Rubber Products, Not Elsewhere Classified
3079--Miscellaneous Plastics Products

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3011--TIRES AND INNER TUBES

This industry comprises establishments primarily engaged in manufacturing pneumatic casings inner tubes, and solid cushion tires for all types of vehicles, airplanes, farm equipment, and children's vehicles; tiring; and camelback, and tire repair and retreading materials. For a detailed list of products of industry 3011, refer to table 6A, product codes 3011000 to 3011539.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Tires and Inner Tubes Industry in 1967 totaled $3,733.9 million. This included shipments of tires and inner tubes (primary products), valued at $3,103.4 million, shipments of other products (secondary products) valued at $175.2 million, and miscellaneous receipts of $455.4 million.

This industry's shipments of tires and inner tubes (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 consisted mainly of fabricated rubber products, n.e.c. ($90.1 million), and motor vehicle parts and accessories ($28.8 million).

Industry 3011 shipments of tires and inner tubes (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $3,133.5 million shipped by all industries. In 1963, the coverage ratio was 99 percent. Other industries shipping tires and inner tubes (primary products) consisted mainly of industry 3069,Fabricated Rubber Products, N.E.C., $18.8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3011, these establishments accounted for 0.1 percent of payroll and 0.1 percent of value added by manufacture.

3021--RUBBER FOOTWEAR

This industry comprises establishments primarily engaged in manufacturing all rubber footwear, waterproof fabric upper footwear, and other fabric upper footwear having rubber soles vulcanized to the uppers. Establishments primarily engaged in manufacturing rubber, composition, and fiber heels, soles, soling strips, and related shoemaking and repairing materials are classified in industry 3069. For a detailed list of products of industry 3021, refer to table 6A, product codes 3021000 to 3021098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Rubber Footwear Industry in 1967 totaled $427.0 million. This included miscellaneous receipts of $25.6 million.

Secondary products shipped by this industry in 1967 consisted mainly of shoes, except rubber ($20.4 million), and fabricated rubber products, n.e.c. ($17.6 million).

Shipments of rubber footwear by all industries were valued at $374.6 million. Other industries shipping rubber footwear (primary products) consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3021, these establishments accounted for 0.0 percent of payroll and 0.0 percent of value added by manufacture.

3031--RECLAIMED RUBBER

This industry comprises establishments primarily engaged in reclaiming rubber from scrap rubber tires, tubes and miscellaneous waste rubber articles by processes which result in a devulcanized, depolymerized or regenerated, replasticized product containing added ingredients. This product is sold for use as a raw material in the manufacture of rubber goods with or without admixture with crude rubber or artificial rubber. Establishments primarily engaged in the assembly and wholesale sale of scrap rubber are classified in trade industries. For a detailed list of products of industry 3031, refer to table 6A, product codes 3031000 to 3031011.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Reclaimed Rubber Industry in 1967 totaled $43.8 million. This included shipments of reclaimed rubber (primary products), valued at $35.4 million, shipments of other products (secondary products) valued at $7.2 million, and miscellaneous receipts of $1.2 million.

This industry's shipments of reclaimed rubber (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary).

Secondary products shipped by this industry in 1967 consisted mainly of fabricated rubber products, n.e.c.

Industry 3031 shipments of reclaimed rubber (primary products) in 1967 represented 75 percent (coverage ratio) of these products valued at $47.3 million shipped by all industries. In 1963, the coverage ratio was 77 percent. Other industries shipping reclaimed rubber (primary products) consisted mainly of industry 2818, Industrial Inorganic Chemicals, N.E.C.; industry 3011, Tires and Inner Tubes.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3031, these establishments accounted for 0.0 percent of payroll and 0.9 percent of value added by manufacture.

3069--FABRICATED RUBBER PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing industrial and mechanical rubber goods, rubberized fabrics, vulcanized rubber clothing, and miscellaneous rubber specialties and sundries. Establishments primarily engaged in rebuilding and retreading tires are classified in industry 7534. For a detailed list of products of industry 3069, refer to table 6A, product codes 3069000 to 3069898.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fabricated Rubber Products, N.E.C., Industry in 1967 totaled $3,139.4 million. This included shipments of fabricated rubber products, n.e.c. (primary products), valued at $2,618.6 million, shipments of other products (secondary products) valued at $359.6 million, and miscellaneous receipts of $161.2 million.

This industry's shipments of fabricated rubber products, n.e.c. (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 consisted mainly of miscellaneous plastics products ($125.6 million).

Industry 3069 shipments of fabricated rubber products, n.e.c. (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $2,927.6 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping fabricated rubber products, n.e.c. (primary products) consisted mainly of industry 3011, Tires and Inner Tubes, $90.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3069, these establishments accounted for 0.5 percent of payroll and 0.5 percent of value added by manufacture.

3079--MISCELLANEOUS PLASTICS PRODUCTS

This industry comprises establishments primarily engaged in molding primary plastics for the trade, and fabricating miscellaneous finished plastics products. Establishments

primarily engaged in manufacturing plastics materials, made from resins produced within the plant) in the form of sheets, rods, tubes, granules, powders, or liquids are classified in industry 2821, and those primarily engaged in manufacturing artificial leather in industry 2295. For a detailed list of products of industry 3079, refer to table 6A, product codes 3079000 to 3079898.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Miscellaneous Plastics Products Industry in 1967 totaled $5,414.5 million. This included shipments of miscellaneous plastics products (primary products), valued at $4,885.9 million, shipments of other products (secondary products) valued at $349.8 million, and miscellaneous receipts of $178.8 million.

This industry's shipments of miscellaneous plastics products (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated rubber products, n.e.c. ($49.6 million), special dies, tools, jigs, and fixtures ($41.6 million), and plastics materials and resins ($40.5 million).

Industry 3079 shipments of miscellaneous plastics products (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $5,789.0 million shipped by all industries. In 1963, the coverage ratio was 80 percent. Other industries shipping miscellaneous plastics products (primary products) consisted mainly of industry 2821, Plastics Materials and Resins, $127.2 million; and industry 3069, Fabricated Rubber Products, N.E.C., $125.6 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3079, these establishments accounted for 1.6 percent of payroll and 1.5 percent of value added by manufacture.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales, for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

	As reported in Current Industrial Reports MA-30D	209.6	113.9

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]Code 3069511 included in code 3069598.

[2]Code 3069526 requested for the first time in 1967--some or all of this production was probably reported in code 3069528 in 1963.

[3]The difference between the value of shipments reported in the census of manufactures and the value reported in the Current Industrial Reports Series MA-30D is accounted for in part by plastics products reported in the census of manufactures as products of industry 3079, Miscellaneous Plastics Products, without sufficient description to recode properly into a more correct product code in other industries and by new producers reporting in the census of manufactures but not included in the Current Industrial Reports.

[4]To avoid disclosing figures for individual companies, "less than 3.0 mils" and "not specified by gauge" were shown as a combined figure for 1967, although it was possible to show separate data for 1963.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Because a major revision in the classification of products assigned to industry 3079, Miscellaneous Plastics Products, was introduced in 1963, prior data, for the most part, are not comparable at the product class level.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e] From 10 to 30 percent of this figure was estimated. (S) Withheld because the estimate did not meet publication standards on the basis of a general consistency review.

[1] This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[2] Included in these quantity figures are the following percentages which were produced and consumed in the same establishment, and for which no value is shown: Industry 3011--Butadiene-styrene type, less than 1 percent; N-type, between 30 and 60 percent; reclaimed rubber, between 12 and 15 percent; thermoplastic resins, between 5 and 10 percent; industries 3031 and 3069--Butadiene-styrene type, between 3 and 5 percent; reclaimed rubber, between 20 and 30 percent.

[3] Included in these quantity figures are the following percentages which were produced and consumed in the same establishments, and for which no value is shown: Industry 3011--Butadiene-styrene type, less than 1 percent; N-type, between 30 and 60 percent; reclaimed rubber, between 12 and 15 percent; thermoplastic resins, between 10 and 20 percent; Industry 3021--Reclaimed rubber, between 25 and 50 percent; industries 3031 and 3069--Reclaimed rubber, between 20 and 25 percent; thermosetting resins, between 3 and 5 percent.

[4] Includes $17.1 million for industry 3031, and $1,228.7 million for industry 3069.

[5] Includes $17.2 million for industry 3031, and $1,008.1 million for industry 3069.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Leather and Leather Products

31A Tanning; industrial leather goods; and shoes

31B Leather gloves; luggage; and miscellaneous leather goods

This major group includes establishments engaged in tanning, currying, and finishing hides and skins; and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials. Leather converters are also included.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. For industries reporting the value of production, the adjustment for the change in finished products inventories was not made. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See Introduction, "Value Added by Manufacture."

[3]The cost of materials and value of shipments figures (2-and 3- digit) include unmeasurable but substantial duplication arising from interplant transfers between establishments within the same industry classification. For a more complete explanation, see Introduction.

[4]For 1958 to 1967, includes expenditures for establishments under construction but not in operation.

[5]In addition to data for operating establishments, 1954, 1958, 1963, and 1967, data are shown for manufacturers' central administrative offices and auxiliary units. Similar data are shown for the years 1949-1953 in the annual survey of manufacturers volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962, or 1964 to 1966 prior to 1949.

[6]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufacturers. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufacturers volume for this period.

TANNING; INDUSTRIAL LEATHER GOODS; AND SHOES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3111--Leather Tanning and Finishing
3121--Industrial Leather Belting and Packing
3131--Boot and Shoe Cut Stock and Findings
3141--Footwear, Except House Slippers and Rubber Footwear
3142--House Slippers

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3111--LEATHER TANNING AND FINISHING

This industry comprises establishments primarily engaged in tanning, currying, and finishing hides and skins into leather. This industry also includes leather converters, who buy hides and skins and have them processed into leather on a contract basis by others. For a detailed list of products of industry 3111, refer to table 6A, product codes 3111111 to 3111911.

Patterns of Operation.--The leather tanning and finishing industry is characterized by three major types of establishment operations: (1) "regular tanneries," (2) leather "converters," and (3) "contract tanneries." The regular tannery purchases raw materials, employs production workers in the plant to tan, curry, and finish the hides and skins, and sells the finished product; in effect, this establishment type performs all of the usual manufacturing functions within one establishment.

The leather converter, on the other hand, typically performs only the entrepreneurial functions of the manufacturing concern, such as buying raw materials, arranging with outside factories (contract tanneries) for the production of the finished leathers, and marketing the finished product. The actual tanning and finishing of the hides and skins is done on contract by the contract tanneries. The contract tanner employs production workers in his own establishment to process materials owned by converters, makes products to specification, and does not become involved in the sale of the finished product.

Methods of Reporting on Census Questionnaires.--Typically, the regular tannery reports figures on employment (including production workers), cost of hides, skins, and other raw materials, and the value of shipments of products made by him from his own materials. The leather converter will show, in addition to his cost of raw materials, a cost for contract work, and the shipments of products made for him from his own materials. The typical leather converter's questionnaire shows few, if any, production workers but labor costs are indirectly reflected in his report on cost of contract work. The con-

tract tanner, on the other hand, reports figures on employment (primarily production workers). Instead of showing the shipments of the leathers which he processed (which would duplicate the data reported by his principals), the contractor reports his receipts for the contract work done for leather converters on their materials. His materials costs and contract receipts do not include any costs for materials which he has processed but did not own.

Classification of Establishments.--Since these diffent methods of operation lead to significant differences in the various relationships between wages and salaries paid, cost of materials, value of shipments, and value added by manufacture, plants were classified by their primary method of operation, as regular tanneries, converters, or contract tanneries. Separate statistics for each group are shown in tables 3 and 4.

It should be noted, however, that some establishments in industry 3111 employ more than one method of operating. For example, some establishments act as both a regular tannery and a leather converter, or as a regular and a contract tannery. In assigning the primary method of operation for manufacturer-converter plants, the relationship between wages and salaries paid to the cost of contract work was the determining factor. If direct wage and salary payments were less than payments for contract work, the plant was classified as a converter. For plants operating as both regular and contract tanneries, the relationship between the value of shipments of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

The code number as well as the definition of this industry was unchanged between 1963 and 1967.

Value of shipments and other receipts of the Leather Tanning and Finishing Industry in 1967 totaled $870.1 million. This included shipments of tanned and finished leather (primary products), valued at $838.9 million, shipments of other products (secondary products) valued at $14.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $17.0 million.

This industry's shipments of tanned and finished leather (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 99 percent. Secondary products shipped by this industry in 1967 consisted mainly of footwear cut stock ($12.2 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 64 percent of the total industry shipments are represented by plants specializing in product class 31111, Finished Cattle Hide and Kip Side Leathers.

Industry 3111 shipments of tanned and finished leather (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $846.2 million shipped by all industries. In 1963, the coverage ratio was 100 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3111, these establishments accounted for 1.1 percent of payroll and 1.5 percent of value added by manufacture.

3121--INDUSTRIAL LEATHER BELTING AND PACKING

This industry comprises establishments primarily engaged in manufacturing industrial leather products, such as transmission belting, mechanical packings, and textile leathers. Establishments primarily engaged in manufacturing leather gaskets are classified in industry 3293. For a detailed list of products of industry 3121, refer to table 6A, product codes 3121013 to 3121098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Leather Belting Industry in 1967 totaled $53.8 million. This included shipments of industrial leather belting and packing (primary products), valued at $40.3 million, shipments of other products (secondary products) valued at $7.2 million, and miscellaneous receipts of $6.3 million.

This industry's shipments of industrial leather belting and packing (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated rubber products, n.e.c ($2 to $5 million).

Industry 3121 shipments of industrial leather belting and packing (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $44.7 million shipped by all industries. In 1963, the coverage ratio was 84 percent. Other industries shipping industrial leather belting and packing (primary products) consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C. ($2 to $5 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3121, these establishments accounted for 3.1 percent of payroll and 3.8 percent of value added by manufacture.

3131--BOOT AND SHOE CUT STOCK AND FINDINGS

This industry comprises establishments primarily engaged in manufacturing leather soles, innersoles, and other boot and shoe cut stock and findings. This industry also includes finished wood heels. Establishments primarily engaged in manufacturing heels, soling strips, and soles made of rubber, composition, plastics, and fiber are classified in Major Group 30. For a detailed list of products of industry 3131, refer to table 6A product codes 3131011 to 3131069.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Footwear Cut Stock Industry in 1967 totaled $262.8 million. This included shipments of footwear cut stock (primary products), valued at $235.3 million, shipments of other products (secondary products) valued at $15.2 million, and miscellaneous receipts of $12.3 million.

This industry's shipments of footwear cut stock (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated rubber products, n.e.c. ($5 to $10 million).

Industry 3131 shipments of footwear cut stock (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $254.3 million shipped by all industries. In 1963, the coverage ratio was 94 percent. Other industries shipping footwear cut stock (primary products) consisted mainly of industry 3021, Rubber Footwear, over $2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3131, these establishments accounted for 2.3 percent of the payroll and 2.7 percent of value added by manufacture.

3141--FOOTWEAR, EXCEPT HOUSE SLIPPERS AND RUBBER FOOTWEAR

This industry comprises establishments primarily engaged in the production of boots and shoes designed primarily for street, work, play, or sport wear. Establishments primarily engaged in the production of such protective footwear as rubbers, rubber boots, storm shoes, galoshes, and other footwear with rubber soles vulcanized to the uppers are classified in industry 3021. For a detailed list of products of industry 3141, refer to table 6A, product codes 3141100 to 3141700.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Shoes, Except Rubber, Industry in 1967 totaled $2,770.5 million. This included shipments of shoes, except rubber (primary products), valued at $2,626.2 million, shipments of other products (secondary products) valued at $16.5 million, and miscellaneous receipts of $127.8 million.

This industry's shipments of shoes, except rubber (primary products) in 1967 represented 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 99 percent. Secondary products shipped by this industry in 1967 consisted mainly of house slippers (over $2 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 27 percent of the total industry shipments are represented by plants specializing in product class 31411, Men's Dress Shoes, Including Play Shoes, and 46 percent in 31414, Women's Dress, Work, and Play Shoes.

Industry 3141 shipments of shoes except rubber (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $2,666.2 million shipped by all industries. In 1963, the coverage ratio was 99 percent. Other industries shipping shoes, except rubber (primary products) consisted mainly of industry 3021, Rubber Footwear $20.4 million; Industry 3142, House Slippers $7.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3141, these establishments accounted for 0.2 percent of payroll and 0.2 percent of value added by manufacture.

3142--HOUSE SLIPPERS

This industry comprises establishments primarily engaged in manufacturing house slippers of leather or other materials. For a detailed list of products of industry 3142, refer to table 6A, product code 3142013 to 3142061.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the House Slippers Industry in 1967 totaled $181.0 million. This included shipments of house slippers (primary products), valued at $151.2 million, shipments of other products (secondary products) valued at $12.4 million, and miscellaneous receipts of $17.4 million.

This industry's shipments of house slippers (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of shoes, except rubber ($7.4 million), and rubber footwear ($4.8 million).

Industry 3142 shipments of house slippers (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $162.3 million shipped by all industries. In 1963, the coverage ratio was 85 percent. Other industries shipping house slippers (primary products) consisted mainly of industry 3141, Shoes, Except Rubber, over $2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3142, these establishments accounted for 0.6 percent of payroll and 0.6 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3111 was 474, 482, and 521, respectively; in industry 3121: 63, 81, and 99; industry 3131: 348, 414, and 472; industry 3141: 676, 784, and 872; industry 3142: 125, 149, and 160. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in Introduction: "Industry Classification of Establishments" for further explanation.)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]Some of the small establishments in this subindustry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.
[e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.) - Represents zero.
[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[r]Revised.
[1]Includes receipts for contract finishing and tanning done for others on their materials. Information for 1963 has been corrected to show these changes; comparable data for previous census studies are not available.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (million pairs)	Value ($1,000)	Quantity (million pairs)	Value ($1,000)
31420 60	House slippers, total				
	As reported in the census of manufactures	98.3	162.3	79.8	127.6
	As reported on Census annual Form MA-31A[4]	95.6	(NA)	77.6	(NA)

Product code	Product	Production (million pairs)	
		1967	1963
	(AS REPORTED ON CENSUS ANNUAL FORM MA-31A, SHOES AND SLIPPERS)[5]		
31420 --	Slippers, total	95.6	77.6
31420 13	All slippers of slip-on type with underwedge heel or blown sponge rubber midsole	10.9	
	Other slippers:		
	Men's, youths', and boys'	14.9	
31420 21	Men's	13.8	
31420 23	Youths' and boys'	1.0	77.6
31420 41	Women's	57.2	
	Misses', children's, infants', and babies'	12.7	
31420 45	Misses' and children's	9.3	
31420 61	Infants' and babies'	3.3	

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000." Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

- Represents zero. [6]From 10 to 30 percent of this figure was estimated. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable.

[1]Quantity estimated based on the unit-value relationship reported for other products of the product class.

[2]Combined to avoid disclosing operations of individual companies.

[3]The Census Annual Form MA31A, Shoes and Slippers data represents production of shoes whereas the census of manufactures data represents shipments of shoes and are not directly comparable. Detailed statistics are shown in Current Industrial Reports Series MA31A, Shoes and Slippers Summary for 1967.

[4]Quantity estimated using the average unit-value reported by other shoe producing companies reporting both quantity and value of shipments.

[5]Detailed statistics of shoes and slipper production by type of construction are shown in Current Industrial Reports Series M31A, released on September 13, 1968.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]For 1967 and 1963, contract receipts include all receipts for tanning and finishing done for others on their materials regardless of the industry classification of the establishments. Prior to 1963, contract receipts include establishments classified in industry 3111, Leather Tanning and Finishing; however, the amount of contract activity (tanning and finishing leather) outside of this industry is believed to be insignificant. Data for 1964 to 1966 exclude contract receipts.

[3]Represents value of production rather than value of shipments.

[4]The figures shown for 1947 are not completely comparable due to differences in reporting by manufacturers of sandal-type shoes. The 1947 data for play shoes, which are not included in the product class detail, are as follows: Men's, youths', and boys', 0.7 million pairs, $2.4 million; Womens' and misses', 29.5 million pairs, $73.3 million; Children's 0.8 million pairs, $1.2 million; Infants' and babies', 0.7 million pairs, $1.01 thousand.

[5]Quantity estimated using the average unit-value reported by other shoe producing companies reporting both quantity and value of shipments.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. In some cases figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or from related figures. [e]From 10 to 30 percent of this figure was estimated.

[1]Combined to avoid disclosing the operations of individual companies.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this included estimates for companies that were not mailed report forms.

[3]For 1963, figures are in million pounds.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

LEATHER GLOVES; LUGGAGE; AND MISCELLANEOUS LEATHER GOODS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3151--Leather Gloves and Mittens
3161--Luggage
3171--Women's Handbags and Purses
3172--Personal Leather Goods, Except Women's Handbags and Purses
3199--Leather Goods, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3151--LEATHER GLOVES AND MITTENS

This industry comprises establishments primarily engaged in manufacturing dress, semidress, and work gloves exclusively of leather or leather with lining of other material. Establishments primarily engaged in manufacturing sporting and athletic gloves are classified in industry 3949; and dress, semidress, and work gloves and mittens of cloth or cloth and leather combined in industry 2381. For a detailed list of products of industry 3151, refer to table 6A, product codes 3151010 to 3151070.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Leather Gloves and Mittens Industry in 1967 totaled $86.7 million. This included shipments of leather gloves and mittens (primary products), valued at $61.6 million, shipments of other products (secondary products) valued at $6.6 million, and miscellaneous receipts of $18.5 million.

This industry's shipments of leather gloves and mittens (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabric dress and work gloves ($6.0 million).

Industry 3151 shipments of leather gloves and mittens (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $73.3 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping leather gloves and mittens (primary products) consisted mainly of industry 2381, Fabric Dress and Work Gloves, $10.6 million.

Establishments in this industry were requested to report value of shipments beginning in 1963 and value of production in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the industry's value of shipments shown in table 1.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3151, these establishments accounted for 3.6 percent of payroll and 5.8 percent of value added by manufacture.

3161--LUGGAGE

This industry comprises establishments primarily engaged in manufacturing luggage of leather or other materials. For a detailed list of products of industry 3161, refer to table 6A, product codes 3161016 to 3161098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Luggage Industry in 1967 totaled $334.2 million. This included shipments of luggage (primary products), valued at $308.5 million, shipments of other products (secondary products) valued at $13.7 million, and miscellaneous receipts of $12.0 million.

This industry's shipments of luggage (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of sporting and athletic goods, n.e.c. (over $2 million).

Industry 3161 shipments of luggage (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $320.1 million shipped by all industries. In 1963, the coverage ratio was also 94 percent.

For industry 3161, the Census Bureau collected current statistics on selected products. These data appear in the Current Industrial Reports series M31E, Luggage, Briefcases, and Personal Leather Goods. The publication of monthly data in this series was terminated, however, with the December 1968, monthly report.

The 1967 summary data compiled from this survey are shown in table 6A together with the comparable totals reported in the census of manufactures. The two sets of 1967 data differ primarily because of the different procedures used in deriving the totals. All manufacturing plants are included in the census of manufactures. The monthly M31E data, on the other hand, are estimates based on reports received from a sample of producers benchmarked to their 1963 Census of Manufactures reports. Over a period of time, most samples, including this one, are subject to increasing errors pending rebenchmarking to a complete universe. The sample for the luggage and personal leather goods survey did not completely reflect the changes in business activity of the nonsample companies and consequently the estimates differ from the results of the complete census.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3161, these establishments accounted for 1.4 percent of payroll and 1.7 percent of value added by manufacture.

3171--WOMEN'S HANDBAGS AND PURSES

This industry comprises establishments primarily engaged in manufacturing women's handbags and purses of leather or other materials, except precious metal (industry 3911). For a detailed list of products of industry 3171, refer to table 6A, product codes 3171011 to 3171071.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Women's Handbags and Purses Industry in 1967 totaled $327.2 million. This included shipments of women's handbags and purses (primary products), valued at $304.9 million, shipments of other products (secondary products) valued at $7.5 million, and miscellaneous receipts of $14.8 million.

This industry's shipments of women's handbags and purses (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 98 percent.

Industry 3171 shipments of women's handbags and purses (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $312.1 million shipped by all industries. In 1963, the coverage ratio was 98 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3171, these establishments accounted for 2.3 percent of payroll and 2.5 percent of value added by manufacture.

3172--PERSONAL LEATHER GOODS, EXCEPT WOMEN'S HANDBAGS AND PURSES

This industry comprises establishments primarily engaged in manufacturing small articles, such as billfolds, key cases, and coin purses of leather or other materials, except precious metal (industry 3911). For a detailed list of products of industry 3172, refer to table 6A, product codes 3172011 to 3172098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Personal Leather Goods Industry in 1967 totaled $186.2 million. This included shipments of personal leather goods (primary products), valued at $163.9 million, shipments of other products (secondary products) valued at $10.4 million, and miscellaneous receipts of $11.9 million.

This industry's shipments of personal leather goods (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 96 percent.

Industry 3172 shipments of personal leather goods (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $178.9 million shipped by all industries. In 1963, the coverage ratio was also 92 percent. Other industries shipping personal leather goods (primary products) consisted mainly of industry 3851, Ophthalmic Goods, over $2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3172, these establishments accounted for 2.9 percent of payroll and 3.2 percent of value added by manufacture.

3199--LEATHER GOODS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing leather goods, not elsewhere classified, such as saddlery, harness, and whips; embossed leather goods; leather desk sets; and razor strops. For a detailed list of products of industry 3199, refer to table 6A, product codes 3199011 to 3199098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Leather Goods, N.E.C., Industry in 1967 totaled $96.5 million. This included shipments of leather goods, n.e.c. (primary products), valued at $77.7 million, shipments of other products (secondary products) valued at $5.4 million, and miscellaneous receipts of $13.4 million.

This industry's shipments of leather goods, n.e.c. (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of sporting and athletic goods, n.e.c. ($3.8 million).

Industry 3199 shipments of leather goods, n.e.c. (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $89.9 million shipped by all industries. In 1963, the coverage ratio was 82 percent. Other industries shipping leather goods, n.e.c. (primary products) consisted mainly of industry 2387, Apparel Belts, $2 to $5 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3199, these establishments accounted for 10.2 percent of payroll and 13.2 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3151 was 136, 160, and 171, respectively; in industry 3161: 328, 377, and 428; industry 3171: 488, 539, and 611; industry 3172: 293, 325, and 399; industry 3199: 358, 365 and 429. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability. (Z) Under 50 thousand (or under 50 employees).

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in Introduction: "Industry Classification of Establishments" for further explanation.)

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[e] For 1967, over 30 percent of the data for this line was estimated. - Represents zero. (X) Not applicable. (Z) Under 50 thousand (or under 50 employees.)

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security paryolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

31990 02	Leather goods, n.s.k. (Represent companies with less than 10 employees. See Note.)	11.4	

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]From 10 to 30 percent of this figure was estimated.

[1]Includes only all leather gloves and mittens. Leather and fabric combinations are classified in industry 2381, Fabric Dress and Work Gloves.

[2]For 1963, the quantity data reported on census annual Form MA-23D, Gloves and Mittens, represent quantity produced rather than quantity shipped.

[3]Quantity estimated based on the average unit value reported by other glove producing companies reporting both quantity and value of shipments.

[4]The reasons for the differences between the data collected in the census of manufactures and the current monthly survey M31E are discussed in the text.

[5]For both 1963 and 1967 data collected in the census of manufactures are not completely comparable to those collected on the census monthly survey M31E to the extent that vanity cases are included in the monthly survey data but are classified in industry 3172, Small Leather Goods, in the census of manufactures.

[6]For 1963, includes 139 thousand other women's hand luggage, including cosmetic cases, etc., but excluding vanity cases, valued at $1.6 million. These data were not collected separately for 1967 and are included in the detail shown for women's hand luggage.

[7]Includes shipments of 532 thousand other women's hand luggage including cosmetic cases, etc., excluding vanity cases. Comparable value figures were not collected separately and are included in the total. It should be noted that the quantity figures for this product were withheld from the monthly publication (M31E) and may be of limited reliability.

[8]For 1963, figures for men's molded hand luggage were not collected separately but were included with men's hard side and soft side hand luggage.

[9]Value for attaché cases were not collected separately but are included with "Brief bags, briefcases, shoolbags, envelopes and zippered ring binder and catalog cases."

[10]The products of this industry only include leather goods that are not classified in other industries. (See Text.)

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or dropping of fractions of thousands rather than rounding in computer operations. See Appendix, "Explanation of Terms."

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]For 1958 and prior years, data represent value of production rather than value of shipments.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[2]Included with "other materials, parts, containers, and supplies."

Stone, Clay, and Glass Products

32A Glass products

32B Cement and structural clay products

32C Pottery and related products

32D Concrete, plaster, and cut-stone products

32E Abrasive, asbestos, and miscellaneous nonmetallic mineral products

This major group includes establishments engaged in manufacturing flat glass and other glass products, cement, structural clay products, pottery, concrete, and gypsum products, cut-stone products, abrasive and asbestos products, etc., from materials taken principally from the earth in the form of stone, clay, and sand. When separate reports are available for mines and quarries operated by manufacturing establishments classified in this major group, the mining activities are classified in mining industries; when separate reports are not available, the mining activities are classified herein with the manufacturing operations.

[1]Figures for establishments primarily engaged in producing ready-mixed concrete are excluded for 1954, 1947, and 1939. In 1958, the value added in ready-mixed concrete establishments represented 12 percent of the total value added for the stone, clay, and glass products, and in 1937, less than 1 percent. As indicated in the introductory text, certain quarries, operated as parts of manufacturing establishments, are included in the stone, clay and glass products industries but separate figures for such mining activity were also obtained in the last three censuses. The value added at quarries operated in conjunction with these manufacturing establishments (including value added in producing mineral products consumed in the same establishment) was $321,240 thousand in 1963; $360,992 thousand in 1958; and $193,636 thousand in 1954. Further detail on such mining operations are included in the Census of Mineral Industries reports.

[2]The figures for 1939 through 1954 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[3]For the period 1954 to 1965, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, with-out adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year.

[4]The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For more complete explanation, see Introduction.

[5]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[6]Similar data are shown for the years 1949 to 1967 in the annual survey or manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959-1962, 1964-1966 or prior to 1949.

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

GLASS PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3211--Flat Glass
3221--Glass Containers
3229--Pressed and Blown Glass and Glassware, Not Elsewhere Classified
3231--Glass Products, Made of Purchased Glass

This group of industries includes establishments primarily engaged in manufacturing flat glass and glass products not specifically classified in other industries. For example, establishments primarily engaged in manufacturing the following glass products are not included in this group of industries: Complete electric light bulbs, electronic or X-ray tubes (classified in Major Group 36, Electrical Machinery and Equipment), ophthalmic goods, including prescription sun glasses and eye-protective goggles (classified in industry 3851, Ophthalmic Goods), glass fabrics (classified in industry 2221, Weaving Mills, Synthetic), glass insulation (classified in industry 3296, Mineral Wool).

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3211--FLAT GLASS

This industry comprises establishments primarily engaged in manufacturing flat glass. This industry also produces laminated glass, but establishments primarily engaged in manufacturing laminated glass from purchased flat glass are classified in industry 3231. For a detailed list of products of industry 3211, refer to table 6A.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Flat Glass Industry in 1967 totaled $611.3 million. This included shipments of flat glass (primary products), and other products (secondary products) valued at $601.0 million, and miscellaneous receipts (mainly resales) of $10.3 million.

This industry's shipments of flat glass (primary products) in 1967 represented more than 85 percent (specialization ratio) of its total product shipments (primary and secondary).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3211, these establishments accounted for .05 percent of payroll and .02 percent of value added by manufacture.

3221--GLASS CONTAINERS

This industry comprises establishments primarily engaged in manufacturing glass containers for commercial packing and bottling, and for home canning. For a detailed list of products of industry 3221, refer to table 6A, product codes 3221011 to 3221062.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Glass Containers Industry in 1967 totaled $1,352.4 million. This included shipments of glass containers (primary products), valued at $1,327.0 million, shipments of other products (secondary products) valued at $6.1 million, and miscellaneous receipts (mainly resales) of $19.3 million.

This industry's shipments of glass containers (primary products) in 1967 represented 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 99 percent.

Industry 3221 shipments of glass containers (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $1,331.0 million shipped by all industries. In 1963, the coverage ratio was also 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3221, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3229--PRESSED AND BLOWN GLASS AND GLASSWARE, N.E.C.

This industry comprises establishments primarily engaged in manufacturing glass and glassware, not elsewhere classified, pressed, blown, or shaped from glass produced in the same establishment. Establishments primarily engaged in manufacturing textile glass fibers are also included in this industry, but establishments primarily engaged in manufacturing glass wool insulation products are classified in industry 3296. Establishments primarily engaged in the production of pressed lenses for vehicular lighting, beacons, and lanterns are also included in this industry, but establishments primarily engaged in the production of optical lenses are classified in industry 3831. Establishments primarily engaged in manufacturing glass containers are classified in industry 3221. For a detailed list of products of industry 3229, refer to table 6A, product codes 3229121 to 3229429.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Pressed and Blown Glass, N.E.C., Industry in 1967 totaled $886.2 million. This included shipments of pressed and blown glass, n.e.c. (primary products), valued at $859.1 million, shipments of other products (secondary products) valued at $24.2 million, and miscellaneous receipts (mainly resales) of $2.9 million.

This industry's shipments of pressed and blown glass, n.e.c. (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 96 percent. Secondary products shipped by this industry in 1967 consisted mainly of electric housewares and fans and flat glass.

Industry 3229 shipments of pressed and blown glass, n.e.c. (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $880.4 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Other industries shipping pressed and blown glass, n.e.c. (primary products) consisted mainly of industry 3296, Mineral Wool, $14.8 million; industry 3564, Blowers and Fans, $2.3 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3229, these establishments accounted for 0.2 percent of payroll and 0.2 percent of value added by manufacture.

3231--GLASS PRODUCTS, MADE OF PURCHASED GLASS

This industry comprises establishments primarily engaged in manufacturing glass products from purchased glass. Establishments primarily engaged in manufacturing optical lenses and ophthalmic lenses are classified in Major Group 38. For a detailed list of products of industry 3231, refer to table 6A, product codes 3231511 to 3231698.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Products of Purchased Glass Industry in 1967 totaled $794.7 million. This included shipments of products of purchased glass (primary products) and other products (secondary products) valued at $739.4 million, and miscellaneous receipts (mainly resales) of $55.2 million.

This industry's shipments of products of purchased glass (primary products) in 1967 and 1963 represented over 90 percent (specialization ratio) of its total product shipments (primary and secondary).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3231 these establishments accounted for 2.7 percent of payroll and 2.7 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3211 was 39, 11, and 14, respectively; in industry 3221: 39, 40, and 42; industry 3229: 139, 75, and 111; industry 3231: 845, 1,016, and 1,002. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges for such States.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.) - Represents zero.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1] This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.

[2] Includes laminated glass (product classes 32113 and 32313) which is primary to industry 3211 when made by primary glass producers, and industry 3231 when made from purchased glass. Separate totals withheld to avoid disclosing figures of individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments."

32113 -- 32313 --	Laminated glass, including safety glass, total[5]	210.6	361.7	188.0	317.3

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 19 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level 5 digits followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." 000 figure is not strictly comparable to the total of the two "n.s.k." 000 and 002 figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code 5 digits followed by "00," or in some cases in the appropriate product group code 4 digits followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding in computer operations.

Standard notes: - Represents zero. X Not applicable. NA Not available. D Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of consistency review. Z Under 50 thousand or under 50 employees.

[1]Includes laminated glass (product codes 3211311-3211371 and 3231311-3231398).

[2]Includes glass of which one or both surfaces are roughed, figured, ribbed or otherwise impressed. Excludes glass block and tile.

[3]Combined to avoid disclosing figures of individual companies.

[4]Detail not available in 1963. Total equals $175.8 million as reported above.

[5]Includes laminated glass made in the Flat Glass Industry 3211 and laminated glass made in products of purchased glass industry 3231 combined to avoid disclosing figures of individual companies. For 1963, no production or shipments of "Laminated plate, over 1/4 inch," code 3211331, "Laminated sheet window glass" code 3211351 or "Other laminated glass" code 3211371 were reported in the Flat Glass Industry 3211. The same is true for 1967, except that a small amount of "Laminated plate over 1/4 inch" code 3211331 was produced in the Flat Glass Industry 3211.

[6]Comparable monthly quantity data are published in Current Industrial Reports Series M32G, Glass Containers.

[7]Total excludes product class 32313, laminated glass. See footnote 5.

[8]Separate data were not collected for automotive rearview mirrors for 1963. An indeterminable amount is included in product codes 3231511-3231563.

[9]Beginning in 1964 data for a number of these categories are shown in Current Industrial Reports Series, MA-32E.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]The figures for 1964-1965 represent estimates derived from a representative sample of manufacturing establishments canvasssd in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[2]Includes laminated glass shipped by establishments classified in industry 3211, Flat Glass, and industry 3231, Products of Purchased Glass, to avoid disclosing figures for individual companies.

[3]Excludes laminated glass, product class 32313.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

CEMENT AND STRUCTURAL CLAY PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3241--Cement, Hydraulic
3251--Brick and Structural Clay Tile
3253--Ceramic Wall and Floor Tile
3255--Clay Refractories
3259--Structural Clay Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3241--CEMENT, HYDRAULIC

This industry comprises establishments primarily engaged in manufacturing hydraulic cement, including portland, natural, masonry, and pozzolan cements. For a detailed list of products of industry 3241, refer to table 6A, product codes 3241011 to 3241051.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Hydraulic Cement Industry in 1967 totaled $1,246.5 million. This included shipments of hydraulic cement (primary products), valued at $1,217.4 million, shipments of other products (secondary products) valued at $8.3 million, and miscellaneous receipts (mainly resales) of $20.8 million.

This industry's shipments of hydraulic cement (primary products) in 1967 represented 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 99 percent. Secondary products shipped by this industry in 1967 consisted mainly of crushed and broken limestone ($3.2 million).

Industry 3241 shipments of hydraulic cement (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $1,221.7 million shipped by all industries. In 1963, the coverage ratio was 99 percent. Another industry shipping hydraulic cement (primary products) was industry 2812, Alkalies and Chlorine (over $2 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For Industry 3241, these establishments accounted for 0.04 percent of payroll and 0.02 percent of value added by manufacture.

3251--BRICK AND STRUCTURAL CLAY TILE

This industry comprises establishments primarily engaged in manufacturing brick and structural clay tile. Establishments primarily engaged in manufacturing clay firebrick are classified in industry 3255, nonclay firebrick in industry 3297, sand lime brick in industry 3299, and glass brick in industry 3229. For a detailed list of products of industry 3251, refer to table 6A, product codes 3251111 to 3251251.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Brick and Structural Clay Tile Industry in 1967 totaled $362.0 million. This included shipments of brick and structural clay tile (primary products), valued at $340.0 million, shipments of other products (secondary products) valued at $7.6 million, and miscellaneous receipts (mainly resales) of $14.4 million.

This industry's shipments of brick and structural clay tile (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 98 percent. Secondary products shipped by this industry in 1967 consisted mainly of structural clay products, n.e.c. ($3.8 million).

Industry 3251 shipments of brick and structural clay tile (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $343.9 million shipped by all industries. In 1963, the coverage ratio was 98 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For Industry 3251, these establishments accounted for 0.6 percent of payroll and 0.8 percent of value added by manufacture.

3253--CERAMIC WALL AND FLOOR TILE

This industry comprises establishments primarily engaged in manufacturing ceramic wall and floor tile and includes glazed wall tile, ceramic mosaic tile and quarry tile. Establishments primarily engaged in manufacturing structural clay tile and facing tile (structural) are classified in industry 3251, and drain tile in industry 3259. For a detailed list of products of industry 3253, refer to table 6A, product codes 3253013 to 3253071.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Ceramic Wall and Floor Tile Industry in 1967 totaled $160.5 million. This included shipments of ceramic wall and floor tile (primary products), valued at $133.3 million, shipments of other products (secondary products) valued at $9.2 million, and miscellaneous receipts (mainly resales) of $18.0 million.

This industry's shipments of ceramic wall and floor tile (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of fine earthenware food utensils (over $2 million).

Industry 3253 shipments of ceramic wall and floor tile (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $134.8 million shipped by all industries. In 1963, the coverage ratio was 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For Industry 3253, these establishments accounted for 0.2 percent of payroll and 0.1 percent of value added by manufacture.

3255--CLAY REFRACTORIES

This industry comprises establishments primarily engaged in manufacturing clay firebrick and other heat resisting clay products. Establishments primarily engaged in manufacturing nonclay refractories, as well as all graphite refractories whether of carbon bond or ceramic bond, are classified in industry 3297. For a detailed list of products of industry 3255, refer to table 6A, product codes 3255011 to 3255094.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Clay Refractories Industry in 1967 totaled $246.1 million. This included shipments of clay refractories (primary products), valued at $216.5 million, shipments of other products (secondary products) valued at $19.6 million, and miscellaneous receipts (mainly resales) of $10.0 million.

This industry's shipments of clay refractories (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of nonclay refractories ($10 to $20 million), mineral wool (over $2 million).

Industry 3255 shipments of clay refractories (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $235.3 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Another industry shipping clay refractories (primary products) was Industry 3297, Nonclay Refractories, $14.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For Industry 3255, these establishments accounted for 0.7 percent of payroll and 0.8 percent of value added by manufacture.

3259--STRUCTURAL CLAY PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the manufacture of clay sewer pipe and structural clay products, not elsewhere classified, such as architectural terra-cotta, roofing tile, conduit, chimney pipe, wall coping, adobe brick, etc.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Structural Clay Products, N.E.C., Industry in 1967 totaled $152.9 million. This included shipments of structural clay products, n.e.c. (primary products), valued at $131.8 million, shipments of other products (secondary products) valued at $13.2 million, and miscellaneous receipts (mainly resales) of $7.9 million.

This industry's shipments of structural clay products, n.e.c. (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 consisted mainly of miscellaneous plastics products ($5 to $10 million).

Industry 3259 shipments of Structural Clay Products, N.E.C. (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $137.1 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Another industry shipping structural clay products, n.e.c. (primary products) was industry 3251, Brick and Structural Clay Tile, $3.8 million.

As indicated in the introduction, small establishments generally with less than 10 em-employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For Industry 3259, these establishments accounted for 0.5 percent of payroll and 0.6 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3241 was 65, 55, and 62, respectively; in industry 3251: 377, 401, and 468; industry 3253: 57, 72, and 79; industry 3255: 83, 80, and 104; industry 3259: 110, 126, and NA.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for Table 6A--32B

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of consistency reveiw. (Z) Under 50 thousand (or under 50 employees).

[1]Does not include shipments of ground crude fire clay, high alumina clay, and silica fire clay for direct use as finished refractory products, but not classified as refractories under the Standard Industrial Classification System.

[2]Data for, "Glass-house pots, tank blocks, feeder parts, and upper structure shapes used only for glass tanks" (3255045) is combined with data for "Fireclay (including semisilica) brick and shapes, except superduty" (3255011) in order to avoid disclosing individual company data. For 1963, quantity of shipments was shown in short tons.

[3]Excludes data for mullite and extra high alumina refractories. These products are included with mullite and extra high-alumina brick and shapes in the nonclay refractories section.

[4]"Calcined" as applied to diaspore and bauxite implies heat treatment short of fusion for volume stability prior to use in a refractory product. In the process, volatile materials are driven off and chemical changes take place.

[5]The subdivisions are in accordance with the ASTM Classification C1 55, the respective groups being 16, 20, 23, and 28 and higher.

[6]Includes bonding mortars which contain up to 60% Al_2O_3, dry basis. Bonding mortars which contain more than 60% Al_2O_3 dry basis are included in the nonclay refractories section.

[7]Includes products referred to as plastic fire brick and the less plastic materials intended for ramming into place after the addition of water (when shipped in dry form). Excludes mixes made of mullite or extra high alumina. Mixes made of these products are included in the nonclay refractories section.

[8]Includes shipments for direct use as finished refractory products by establishments classified in "manufacturing" industries, and excludes shipments to refractory producers for reprocessing in the manufacture of brick and other refractories.

[9]Includes data for calcined clay, ground brick, and siliceous and other gunning mixes.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]The figures for 1964-1966 represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

POTTERY AND RELATED PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3261--Vitreous China Plumbing Fixtures and Earthenware Fittings and Bathroom Accessories
3262--Vitreous China Table and Kitchen Articles
3263--Fine Earthenware (Whiteware) Table and Kitchen Articles
3264--Porcelain Electrical Supplies
3269--Pottery Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3261--VITREOUS CHINA PLUMBING FIXTURES AND EARTHENWARE FITTINGS AND BATHROOM ACCESSORIES

This industry comprises establishments primarily engaged in the manufacture of china plumbing fixtures and china and earthenware fittings and bathroom accessories. For a detailed list of products of industry 3261, refer to table 6A, product codes 32610 10 to 32610 51.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Vitreous Plumbing Fixtures Industry in 1967 totaled $170.0 million. This included shipments of vitreous plumbing fixtures (primary products), valued at $142.2 million, shipments of other products (secondary products) valued at $7.6 million, and miscellaneous receipts (mainly resales) of $20.2 million.

This industry's shipments of vitreous plumbing fixtures (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent. Secondary products shipped by this industry in 1967 consisted mainly of plumbing fittings and brass goods.

Industry 3261 shipments of vitreous plumbing fixtures (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $148.9 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Another industry shipping vitreous plumbing fixtures (primary products) was industry 3431, Metal Sanitary Ware.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3261, these establishments accounted for 0.18 percent of payroll and 0.27 percent of value added by manufacture.

3262--VITREOUS CHINA TABLE AND KITCHEN ARTICLES

This industry comprises establishments primarily engaged in manufacturing vitreous china table and kitchen articles for use in households and in hotels, restaurants, and other commercial institutions for preparing, serving, or storing food or drink. Establishments primarily engaged in manufacturing fine (semivitreous) types of earthenware (whiteware) table and kitchen articles are classified in industry 3263. For a detailed list of products of industry 3262, refer to table 6A, product codes 32620 14 to 32620 52.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Vitreous China Food Utensils Industry in 1967 totaled $67.2 million. This included shipments of vitreous china food utensils (primary products), valued at $62.0 million, shipments of other products (secondary products) and miscellaneous receipts (mainly resales) of $5.2 million.

This industry's shipments of vitreous china food utensils (primary products) in 1967 and 1963 represented a minimum of 90 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 consisted mainly of pottery products, n.e.c.

Industry 3262 shipments of vitreous china food utensils (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $69.6 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Another industry shipping vitreous china food utensils (primary products) was industry 3263, Fine Earthenware Food Utensils.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3262, these establishments accounted for 0.0 percent of payroll and 0.18 percent of value added by manufacture.

3263--FINE EARTHENWARE (WHITEWARE) TABLE AND KITCHEN ARTICLES

This industry comprises establishments primarily engaged in manufacturing fine (semivitreous) types of earthenware table and kitchen articles for preparing, serving, or storing food and drink. Establishments primarily engaged in manufacturing vitreous china table and kitchen articles are classified in industry 3262. For a detailed list of products of industry 3263, refer to table 6A, product codes 32630 12 and 32630 52.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fine Earthenware Food Utensils Industry in 1967 totaled $47.1 million. This included shipments of fine earthenware food utensils (primary products), valued at $40.0 million, shipments of other products (secondary products) valued at $6.8 million, and miscellaneous receipts (resales) of $0.3 million.

This industry's shipments of fine earthenware food utensils (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of vitreous china food utensils.

Industry 3263 shipments of fine earthenware food utensils (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $46.7 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Another industry shipping fine earthenware food utensils (primary products) was industry 3253, Ceramic Wall and Floor Tile.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3263, these establishments accounted for 0.00 percent of payroll and value added by manufacture.

3264--PORCELAIN ELECTRICAL SUPPLIES

This industry comprises establishments primarily engaged in manufacturing porcelain electrical insulators, molded porcelain parts for electrical devices, spark plug and steatitic porcelain, and other electrical supplies from clay and other ceramic materials. For a detailed list of products of industry 3264, refer to table 6A, product codes 32640 12 to 32640 98.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Porcelain Electrical Supplies Industry in 1967 totaled $225.0 million. This included shipments of porcelain electrical supplies (primary products), valued at $185.7 million, shipments of other products (secondary products) valued at $34.1 million, and miscellaneous receipts (mainly resales) of $5.2 million.

This industry's shipments of porcelain electrical supplies (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of current carrying wiring devices, metal cans, and pottery products, n.e.c.

Industry 3264 shipments of porcelain electrical supplies (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $188.6 million shipped by all industries. In 1963, the coverage ratio was 95 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3264, these establishments accounted for 0.11 percent of payroll and 0.07 percent of value added by manufacture.

3269--POTTERY PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in firing and decorating white china and earthenware for the trade and manufacturing art and ornamental pottery, industrial and laboratory pottery, stoneware and coarse earthenware table and kitchen

articles, unglazed red earthenware florists' articles, and other pottery products, not elsewhere classified. For a detailed list of products of industry 3269, refer to table 6A, product codes 32690 11 to 32690 91.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Pottery Products, N.E.C., Industry in 1967 totaled $96.1 million. This included shipments of pottery products, n.e.c. (primary products), valued at $83.2 million, shipments of other products (secondary products) valued at $2.7 million, and miscellaneous receipts (mainly resales) of $10.3 million.

This industry's shipments of pottery products, n.e.c. (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent.

Industry 3269 shipments of pottery products, n.e.c. (primary products) in 1967 represented 87 percent (coverage ratio) of these products valued at $96.0 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping pottery products, n.e.c. (primary products) consisted mainly of industry 3264, Porcelain Electrical Supplies, $6.0 million; industry 3262, Vitreous China Food Utensils ($2-$5 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3269, these establishments accounted for 5.41 percent of payroll and 7.26 percent of value added by manufacture.

The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]This is a minimum percentage. The exact percentage is withheld to avoid disclosing figures for individual companies.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]Source: Current Industrial Reports Series MQ-34E(67)-5. No separate data for vitreous and semivitreous drinking fountains, urinals, sinks, laundry trays, bathtubs, shower receptors (sold separately) and shower stalls (including receptors) are available since these items were combined with similar items made of other materials in the MQ-34E report. Values reported in these two surveys differ. The values reported in the MQ-34E survey represent manufacturers' net billing price after trade and quantity discounts have been subtracted but before cash discounts have been subtracted. Also, returns and allowances are not subtracted. The values reported in the census of manufactures are based on net selling values, f.o.b. plant. Net selling values do not include discounts or allowances. Freight charges and excise taxes are excluded from both surveys.

[2]Represents vitreous china only. In addition, shipments valued at $3.2 in 1967, and $2.4 in 1963, were reported for plumbing fixtures made of glazed earthenware, concrete, and composition.

[3]Includes value of metal fittings when shipped as an integral part of the ceramic product.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

[2]Includes value of metal fittings when shipped as an integral part.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

CONCRETE, PLASTER AND CUT-STONE PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3271--Concrete Block and Brick
3272--Concrete Products, Except Block and Brick
3273--Ready-Mixed Concrete
3274--Lime
3275--Gypsum Products
3281--Cut Stone and Stone Products

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3271--CONCRETE BLOCK AND BRICK

This industry comprises establishments primarily engaged in manufacturing concrete building block and brick from a combination of cement and aggregate. Contractors engaged in concrete construction work are classified in the construction industries, and building materials dealers primarily engaged in mixing and delivering ready-mixed concrete in industry 3273. For a detailed list of products of industry 3271, refer to table 6A, product codes 3271013 to 3271051.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Concrete Block and Brick Industry in 1967 totaled $550.1 million. This included shipments of concrete block and brick (primary products), valued at $433.0 million, shipments of other products (secondary products) valued at $40.6 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $76.4 million.

This industry's shipments of concrete block and brick (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of concrete products, except block and brick ($23.0 million), and ready mixed concrete ($14.1 million).

Industry 3271 shipments of concrete block and brick (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $502.1 million shipped by all industries. In 1963, the coverage ratio was 84 percent. Other industries shipping

concrete block and brick (primary products) consisted mainly of industry 3273, Ready-Mixed Concrete, $46.5 million; industry 3272, Concrete Products, N.E.C., $20.5 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3271, these establishments accounted for approximately 5.2 percent of payroll and 6.1 percent of value added by manufacture.

3272--CONCRETE PRODUCTS, EXCEPT BLOCK AND BRICK

This industry comprises establishments primarily engaged in manufacturing concrete products, except block and brick, from a combination of cement and aggregate. Contractors engaged in concrete construction work are classified in the construction industries, and building materials dealers primarily engaged in mixing and delivering ready-mixed concrete in industry 3273. For a detailed list of products of industry 3272, refer to table 6A, product codes 3272107 to 3272398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Concrete Products, N.E.C., Industry in 1967 totaled $1,201.1 million. This included shipments of concrete products, n.e.c. (primary products), valued at $1,076.6 million, shipments of other products (secondary products) valued at $44.6 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $79.9 million.

This industry's shipments of concrete products, n.e.c. (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of concrete block and brick ($20.5 million), and ready-mixed concrete ($14.3 million).

Industry 3272 shipments of concrete products, n.e.c. (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $1,147.5 million shipped by all industries. In 1963, the coverage ratio was 94 percent. Other industries shipping concrete products, n.e.c. (primary products) consisted mainly of industry 3273, Ready-Mixed Concrete, $34.7 million; industry 3271, Concrete Block and Brick, $23.0 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3272, these establishments accounted for approximately 4.9 percent of payroll and 5.8 percent of value added by manufacture.

3273--READY-MIXED CONCRETE

This industry comprises establishments primarily engaged in manufacturing Portland cement concrete, manufactured and delivered to a purchaser in a plastic and unhardened state. This industry includes production and sale of central-mixed concrete, shrink-mixed concrete and transit-mixed concrete.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Ready-Mixed Concrete Industry in 1967 totaled $2,684.2 million. This included shipments of ready-mixed concrete (primary products), valued at $2,283.8 million, shipments of other products (secondary products) valued at $182.2 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $218.2 million.

This industry's shipments of ready-mixed concrete (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of construction sand and gravel ($58.4 million), and concrete block and brick ($46.5 million).

Industry 3273 shipments of ready-mixed concrete (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $2,330.5 million shipped by all industries. In 1963, the coverage ratio was 98 percent. Other industries shipping ready-mixed concrete (primary products) consisted mainly of industry 3272, Concrete Products, N.E.C., $14.3 million; industry 3271, Concrete Block and Brick, $14.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3273, these establishments accounted for approximately 3.6 percent of payroll and 4.6 percent of value added by manufacture.

3274--LIME

This industry comprises establishments primarily engaged in manufacturing quicklime, hydrated lime, and "dead-burned" dolomite from limestone, dolomite shells, or other substances. For a detailed list of products of industry 3274, refer to table 6A, product codes 3274011 to 3274071.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Lime Industry in 1967 totaled $176.5 million. This included shipments of lime (primary products), valued at $152.4 million, shipments of other products (secondary products) valued at $21.7 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $2.4 million.

This industry's shipments of lime (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent. Secondary products shipped by this industry in 1967 consisted mainly of crushed and broken limestone ($14.0 million), and industrial inorganic chemicals, n.e.c. ($2-$5 million).

Industry 3274 shipments of lime (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $163.5 million shipped by all industries. In 1963, the coverage ratio was 94 percent. Other industries shipping lime (primary products) consisted mainly of industry 3297, Nonclay Refractories (over $2 million); industry 2812, Alkalies and Chlorine (over $2 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3274, these establishments accounted for approximately .5 percent of payroll and .5 percent of value added by manufacture.

3275--GYPSUM PRODUCTS

This industry comprises establishments primarily engaged in manufacturing plaster, plasterboard and other products composed wholly or chiefly of gypsum. For a detailed list of products of industry 3275, refer to table 6A, product codes 3275111 to 3275211.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Gypsum Products Industry in 1967 totaled $387.7 million. This included shipments of gypsum products (primary products), valued at $356.9 million, shipments of other products (secondary products) valued at $13.9 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $16.9 million.

This industry's shipments of gypsum products (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent. Secondary products shipped by this industry in 1967 consisted mainly of minerals ground or treated ($6.4 million), and gypsum ($4.6 million).

Industry 3275 shipments of gypsum products (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $362.4 million shipped by all industries. In 1963, the coverage ratio was 98 percent. Another industry shipping gypsum products (primary products) was industry 2815, Cyclic Intermediates and Crudes (over $2 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3275, these establishments accounted for approximately .4 percent of payroll and .4 percent of value added by manufacture.

3281--CUT STONE AND STONE PRODUCTS

This industry comprises establishments primarily engaged in cutting, shaping, and finishing marble, granite, slate, and other stone for building and miscellaneous uses. Establishments primarily engaged in buying or selling partly finished monuments and tombstones, but performing no work on the stones other than lettering, finishing, or shaping to custom order, are classified in trade industries. The cutting of grindstones, pulpstones, and whetstones at the quarry is classified as mining industries. For a detailed list of products of industry 3281, refer to table 6A, product codes 3281113 to 3281398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Cut Stone and Stone Products Industry in 1967 totaled $236.4 million. This included shipments of cut stone and stone products (primary products), valued at $210.1 million, shipments of other products (secondary products) valued at $12.0 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $14.2 million.

This industry's shipments of cut stone and stone products (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of crushed and broken limestone, n.e.c. ($2.9 million), and rough dimension limestone ($2.1 million).

Industry 3281 shipments of cut stone and stone products (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $211.4 million shipped by all industries. In 1963, the coverage ratio was 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3281, these establishments accounted for approximately 5.0 percent of payroll and 6.8 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3271 was 1,534, 1,786, and 1,763, respectively; in industry 3272: 3,055, 3,130, and 3,190; industry 3273: 4,032, 3,999, and 3,130; industry 3274: 78, 81, and 95; industry 3275: 55, 60, and 74; industry 3281: 776, 857, and 959.
The 1967 counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage of standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

32810 02	Cut stone and stone products, n.s.k. (For companies with less than 10 employees. See Note.)	.....	(X)	16.0		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5-digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00" or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (e) From 10 to 30 percent of this figure was estimated. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1] In 1963 the unit of measure was million linear feet.

[2] In 1963 the unit of measure was thousand short tons.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963—Continued

Footnotes for table 6B-32D

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of these figures were estimated.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]Data not comparable because dressing plants operated in conjunction with quarries were not included.

[3]The 1947 data represent only the products of dressing plants not operated in conjunction with quarries.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

ABRASIVE, ASBESTOS, AND MISCELLANEOUS NONMETALLIC MINERAL PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3291--Abrasive Products
3292--Asbestos Products
3293--Gaskets, Packing, and Asbestos Insulations
3295--Minerals and Earths, Ground or Otherwise Treated
3296--Mineral Wool
3297--Nonclay Refractories
3299--Nonmetallic Mineral Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3291--ABRASIVE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing abrasive grinding wheels of natural or synthetic materials, and other abrasive products. The cutting of grindstones, pulpstones, and whetstones at the quarry is classified in mining industries. For a detailed list of products of industry 3291, refer to table 6A, product codes 3291117 to 3291498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Abrasive Products Industry in 1967 totaled $725.3 million. This included shipments of abrasive products (primary products), valued at $625.4 million, shipments of other products (secondary products) valued at $59.9 million, and miscellaneous receipts (mainly resales) of $40.0 million.

This industry's shipments of abrasive products (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 70 percent. Secondary products shipped by this industry in 1967 consisted mainly of paper coating and glazing and nonclay refractories.

Industry 3291 shipments of abrasive products (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $734.2 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Other industries shipping abrasive products (primary products) consisted mainly of industry 2641, Paper Coating and Glazing, and industry 3545, Machine Tool Accessories.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3291, these establishments accounted for 0.6 percent of payroll and 0.8 percent of value added by manufacture.

3292--ASBESTOS PRODUCTS

This industry comprises establishments primarily engaged in manufacturing asbestos textiles, asbestos building materials, except asbestos paper (industry 2661) and other commodities composed wholly or chiefly of asbestos, except steam and other packing, pipe and boiler covering and gaskets (industry 3293). For a detailed list of products of industry 3292, refer to table 6A, product codes 3292211 to 3292798.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Asbestos Products Industry in 1967 totaled $575.0 million. This included shipments of asbestos products (primary products), valued at $506.6 million, shipments of other products (secondary products) valued at $36.8 million, and miscellaneous receipts (mainly resales) of $31.6 million.

This industry's shipments of asbestos products (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of gaskets and insulations ($10-$20 million), and miscellaneous plastics products ($9.7 million).

Industry 3292 shipments of asbestos products (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $564.6 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping asbestos products (primary products) consisted mainly of industry 2952, Asphalt Felts and Coatings, $20.6 million; industry 3293, Gaskets and Insulations, $13.8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3292, these establishments accounted for 0.1 percent of payroll and 0.1 percent of value added by manufacture.

3293--GASKETS, PACKING, AND ASBESTOS INSULATIONS

This industry comprises establishments primarily engaged in manufacturing packing for steam, water, and other pipe joints, and for engines, air compressors, etc.; and insulating materials for covering boilers and pipes; and gaskets. Establishments primarily engaged in manufacturing leather packing are classified in industry 3121, rubber packing in industry 3069, and metal packing in industry 3599. For a detailed list of products of industry 3293, refer to table 6A, product codes 3293211 to 3293398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Gaskets and Insulations Industry in 1967 totaled $352.8 million. This included shipments of gaskets and insulations (primary products), valued at $276.4 million, shipments of other products (secondary products) valued at $57.1 million, and miscellaneous receipts (mainly resales) of $19.3 million.

This industry's shipments of gaskets and insulations (primary products) in 1967 represented 82 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated rubber products, n.e.c. ($16.6 million), and asbestos products ($13.8 million).

Industry 3293 shipments of gaskets and insulations (primary products) in 1967 represented 81 percent (coverage ratio) of these products valued at $340.5 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping gaskets and insulations (primary products) consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C., $36.0 million; industry 3292, Asbestos Products ($10-$20 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3293, these establishments accounted for 1.0 percent of payroll and 1.2 percent of value added by manufacture.

3295--MINERALS AND EARTHS, GROUND OR OTHERWISE TREATED

This industry comprises establishments primarily engaged in crushing, grinding, pulverizing and otherwise preparing certain earths, rocks, minerals, or slag for sale for industrial uses or for further manufacture. The beneficiating of ores and the cleaning and grading of coal performed at the mine or by primary preparation plants are classified in mining industries. For a detailed list of products of industry 3295, refer to table 6A, product codes 3295011 to 3295098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Minerals, Ground or Treated, Industry in 1967 totaled $280.9 million. This included shipments of minerals, ground or treated (primary products), valued at $240.9 million, shipments of other products (secondary products) valued at $11.0 million, and miscellaneous receipts (mainly resales) of $29.0 million.

This industry's shipments of minerals, ground or treated (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial inorganic chemicals, n.e.c. (over $2 million).

Industry 3295 shipments of minerals, ground or treated (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $270.7 million shipped by all industries. In 1963, the coverage ratio was 86 percent. Other industries shipping minerals, ground or treated (primary products) consisted mainly of industry 3275, Gypsum Products, $6.4 million; industry 3297, Nonclay Refractories, $5.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics estimated from industry averages. For industry 3295, these establishments accounted for 2.4 percent of payroll and 2.3 percent of value added by manufacture.

3296--MINERAL WOOL

This industry comprises establishments primarily engaged in manufacturing mineral wool and mineral wool insulation products made of such silicious materials as rock, slag, or glass, or combinations thereof. Establishments primarily engaged in manufacturing asbestos insulation products are classified in industries 3292 and 3293; and textile glass fibers in industry 3229. For a detailed list of products of industry 3296, refer to table 6A, product codes 3296111 to 3296298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Mineral Wool Industry in 1967 totaled $454.4 million. This included shipments of mineral wool (primary products), valued at $404.9 million, shipments of other products (secondary products) valued at $35.2 million, and miscellaneous receipts of $14.4 million.

This industry's shipments of mineral wool (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of pressed and blown glass, n.e.c. ($14.8 million), and general industrial machinery n.e.c. (over $2 million).

Industry 3296 shipments of mineral wool (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $425.0 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping mineral wool (primary products) consisted mainly of industry 3079, Miscellaneous Plastics Products, and industry 3299, Nonmetallic Mineral Products, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3296, these establishments accounted for 0.2 percent of payroll and 0.2 percent of value added by manufacture.

3297--NONCLAY REFRACTORIES

This industry comprises establishments primarily engaged in manufacturing refractories and crucibles made of materials other than clay. This industry also includes establishments primarily engaged in manufacturing all graphite refractories, whether of carbon bond or ceramic bond. Establishments primarily engaged in manufacturing clay refractories are classified in industry 3255. For a detailed list of products of industry 3297, refer to table 6A, product codes 3297012 to 3297094.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Nonclay Refractories Industry in 1967 totaled $307.1 million. This included shipments of nonclay refractories (primary products), valued at $266.4 million, shipments of other products (secondary products) valued at $30.8 million, and miscellaneous receipts (mainly resales) of $9.9 million.

This industry's shipments of nonclay refractories (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of clay refractories ($14.1 million) and lime (over $2 million).

Industry 3297 shipments of nonclay refractories (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $302.6 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping nonclay refractories (primary products) consisted mainly of industry 3255, Clay Refractories, $15.6 million; industry 3291, Abrasive Products (over $2 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3297, these establishments accounted for 0.3 percent of payroll and 0.3 percent of value added by manufacture.

3299--NONMETALLIC MINERAL PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the factory production of statuary and art goods made of plaster of Paris and papier mache, and in manufacturing sand lime products and other nonmetallic mineral products, not elsewhere classified. For a detailed list of products of industry 3299, refer to table 6A, product codes 3299053 to 3299098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Nonmetallic Mineral Products, N.E.C., Industry in 1967 totaled $99.9 million. This included shipments of nonmetallic mineral products, n.e.c. (primary products), valued at $77.6 million, shipments of other products (secondary products) valued at $16.4 million, and miscellaneous receipts (mainly resales) of $5.9 million.

This industry's shipments of nonmetallic mineral products n.e.c. (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 consisted mainly of paints and allied products and mineral wool.

Industry 3299 shipments of nonmetallic mineral products, n.e.c. (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $87.5 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Another industry shipping nonmetallic minerals, n.e.c. (primary products) was industry 2499, Wood Products, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3299, these establishments accounted for 7 percent of payroll and 7 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3291 was 320, 340, and 317, respectively; in industry 3292: 81, 73, and 69; industry 3293: 288, 282, and 271; industry 3295: 382, 313, and 300; industry 3296: 77, 89, and 74; industry 3297: 59, 51, and 50; industry 3299: 325, 313, and 252.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for table 6A--of 32C--Continued

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either or the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Under $50 thousand.

[1]In 1967 code 3291117 included with code 3291129.

[2]In 1967 code 3293333 included with code 3293339.

[3]Molten cast brick and shapes are included with "Forsterite, pyrophillite, molten-cast dolomite-magnesite and other nonclay brick and shapes."

[4]Molten cast refractories are made by fusing refractory oxides as in an electric furnace and pouring the molten material into molds to form finished shapes.

[5]"Fused" as applied to bauxite and alumina means complete melting, as in an electric furnace; after cooling, the product is crushed and graded for use in the refractory. Dense-sintered alumina refers to heat treatment (short of melting) to render it relatively volume-stable for use in a refractory.

[6]Quantity is estimated for those plants which reported only value. This estimate is between 10 and 30 percent of the total quantity shown for this product.

[7]Data for carbon refractories are combined with "Forsterite, pyrophillite, molten-cast dolomite, dolomite-magnesite and other nonclay brick and shapes" to avoid disclosing figures of individual companies. In 1963, data for carbon refractories was combined with "Nonclay gunning mixes" and "other nonclay refractory materials, sold in lump or ground form."

[8]Includes shipments for direct use as finished refractory products by establishments classified in "manufacturing" industries, and excludes shipments to refractory producers for reprocessing in the manufacture of brick and other refractories.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Not directly comparable with 1958 and prior year data. In 1958 synthetic diamonds were classified in industry 3913, Lapidary Work. The amount is withheld to avoid disclosing figures for individual companies.

[3]Plants producing roofing gravules and plants producing dead-burned magnesia or magnesite in conjunction with mining operations are classified in the mineral industries for 1963. In prior years these plants were included in industry 3295, Minerals, Ground or Treated. Prior years' data have not been revised to avoid disclosing figures of individual companies for 1963 thru 1967.

[4]Figures for 1963 thru 1967 do not reflect the reclassification of exfoliated vermiculate from industry 3296, Mineral Wool, to industry 3295, Minerals, Ground or Treated. Figures for 1947, 1954, and 1958 have been revised.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Primary Metal Industries

33A Blast furnaces, steel works, and rolling and finishing mills

33B Iron and steel foundries

33C Smelting and refining of nonferrous metals and alloys

33D Nonferrous metal mill and foundry products

33E Forgings and miscellaneous primary metal products

This major group includes establishments engaged in the smelting and refining of ferrous and nonferrous metals from ore, pig, or scrap; in the rolling, drawing, and alloying of ferrous and nonferrous metals; in the manufacture of castings, forgings, and other basic products of ferrous and nonferrous metals; and in the manufacture of nails, spikes, and insulated wire and cable. This major group also includes the production of coke.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative office and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957 - 1959 to 1962, 1964 to 1966 and prior to 1949.

[6]The 1957 edition of the Standard Industrial Classification classified beehive coke ovens and byproduct coke ovens in Major Group 33. Such establishments were previously included in Major Group 29, Petroleum and Coal Products. However, this change was reflected in the tabulations for the 1955 to 1957 annual surveys of manufactures. Data for 1954 were retabulated on this basis and are the source of the data labeled "Revised."

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. The estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[8]The figures for 1939 to 1958 are not entirely comparable with those for 1937 because the 1937 figures (a) include data for establishments primily engaged in producing certain nonferrous bearings and aluminum products (ship bunks, ornamental metal work, stampings, novelties, valves and fittings, machined castings and tags), and (b) exclude data for establishments primarily engaged in making electrometallurgical products, nonferrous die castings and forgings, cast aluminum cooking ware, and in the heat treating of steel. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $2,131.2 million. Figures have not been compiled for 1935 and prior years because of large elements of noncomparability in the earlier statistics of a number of industries included in the primary metal group.

[1]The value of shipments and cost of materials for industry groups (2 and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

BLAST FURNACES, STEEL WORKS, AND ROLLING AND FINISHING MILLS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3312--Blast Furnaces (Including Coke Ovens), Steel Works, and Rolling Mills
3313--Electrometallurgical Products
3315--Steel Wiredrawing and Steel Nails and Spikes
3316--Cold Rolled Steel Sheet, Strip, and Bars
3317--Steel Pipe and Tubes

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3312--BLAST FURNACES (INCLUDING COKE OVENS), STEEL WORKS, AND ROLLING MILLS

This industry comprises establishments primarily engaged in manufacturing hot metal, pig iron, silvery pig iron, and ferroalloys from iron ore and iron and steel scrap; converting pig iron, scrap iron, and scrap steel into steel; and in hot rolling iron and steel into basic shapes such as plates, sheets, strips, rods, bars, and tubing. Merchant blast furnaces and byproduct or beehive coke ovens are also included in this industry. For a detailed list of products of industry 3312, refer to table 6A-1, product codes 3312111 to 3312041.

The code number as well as the definition of this industry was unchanged between 1963 and 1967.

Included in this industry are all establishments engaged in the manufacture of blast furnace ferroalloys. However, establishments which manufacture ferro or nonferrous additive alloys by electrometallurgical process are classified in industry 3313, Electrometallurgical Products. Also, establishments which draw wire from purchased rod and bar; establishments which perform only cold rolling, drawing, or finishing operations; and establishments which produce welded, seamless, and heavy riveted pipe from purchased materials are not included in industry 3312, but are included in industry 3315, Steel Wire and Related Products; industry 3316, Cold Finishing of Steel Shapes; and industry 3317, Steel Pipe and Tubes, respectively.

Total cost of materials and the total value of shipments in industry 3312 include extensive duplication resulting from the use of the products of some establishments as materials by others. Some quantities of coke are transferred to blast furnaces which have no affiliated

coke ovens, and considerable quantities of pig iron are transferred from blast furnaces to partially integrated mills. In addition, steel ingots, semifinished shapes, and finished shapes and forms are transferred from one establishment to another for further processing. The value of such shipments appears twice in the total value of shipments; and a corresponding duplication enters into the total cost of materials, etc. This duplication does not exist in the data on value added by manufacture.

As a means of developing a net value of shipments figure, the cost of steel shapes received by establishments in industry 3312 was collected as a separate materials consumed item, and, as shown in table 7A, totaled approximately $2.35 billion. In addition, the cost of pig iron consumed in this industry totaled approximately $0.42 billion. Also, the cost of coke used as a fuel in this industry totaled $0.17 billion. On this basis, the value of materials shipped or transferred between plants within this industry totaled approximately $2.94 billion. Subtracting this value from the total value of shipments of approximately $19.62 billion gives a net value (excluding duplication) of $16.68 billion. A similar adjustment to the total cost of materials, supplies, etc., figure provides a net cost figure of $7,061 million. Adjusting the cost of fuels on this same basis provides a net cost of fuels of $436 million.

Based on departmental operations data it was possible to further classify the establishments of this industry into four subindustries, i.e., fully integrated establishments, partially integrated establishments with blast furnaces, partially integrated establishments without blast furnaces, and nonintegrated establishments. For purposes of this classification system an establishment was defined as follows: fully integrated if the establishment consisted of coke ovens, blast furnaces, steel furnaces, and rolling and finishing mills; partially integrated establishment with blast furnaces if the establishment consisted of blast furnaces, steel furnaces, and rolling and finishing mills; partially integrated establishment without blast furnaces if the establishment consisted of steel furnaces and either rolling and finishing mills or a forging department; nonintegrated for all other establishments including beehive coke ovens, byproduct coke ovens operated independently of blast furnaces and steel departments, merchant blast furnaces and establishments with hot rolling and finishing operations.

In a few cases, operations which are in fact fully integrated are classified as partially integrated or nonintegrated because separate reports were collected either because the operations are conducted in different cities or counties, or the company treats the operations separately for their own administrative reasons.

The subindustry data shown in tables 1, 2, and 4 are based on this system of classification.

The 1967 census obtained data on shipments of steel mill shapes at broad product class levels only. This is the source of the data in table 6A-1 described "As reported in census of manufactures." More detailed product data were obtained on Annual Survey Form MA-33B, and published in Current Industrial Reports Series MA-33B, Steel Mill Products. These data are shown in tables 6A-2 and 6A-3.

Annual Survey Form MA-33B obtained data on the total production of steel at three broad levels of output: ingots; semifinished shapes and forms (blooms, billets, wire rods, skelp, etc.); and finished mill shapes and forms. For each of these groups, the steel mills were requested to report production in the form in which the shape (a) passed from one group to the next, (b) was shipped from the establishment, or (c) was consumed in the establishment in the manufacture of fabricated products. The production figures shown in tables 6A-2 and 6A-3 include data on production derived from this method of reporting. Production figures shown for ingots represent the total production of ingots. Production figures shown for finished shapes and forms are the tonnages of these shapes produced at the steel mill for shipments (either outside the steel industry, or to other steel mills) or for consumption in the manufacture of fabricated products. The production of all semi-

finished shapes and forms combined represent total production of semifinished shapes and forms for sale and transfer and also for use in the same plant in the manufacture of either other steel mill shapes or fabricated products.

Net shipments of steel products (as derived from Survey Form MA-33B) including both the shipments to establishments outside the steel industry and the amounts consumed in the steel mills in the production of fabricated products and for maintenance, repair, and operating supplies, are shown in table 6A-4.

The figures on steel mill shapes shown in tables 6A-1 to 6A-4 include the manufacture of these products in separate cold rolling and drawing establishments, wire drawing plants, and pipe mills as well as steel mills. The receipts of steel at these plants have been taken into account in deriving the net shipment figures shown in table 6A-4.

While the primary products of the industry include a broad range of products, the establishments tend to group themselves into specific product classes within the industry. The extent of this specialization is indicated in table 8.

Data on shipments of pig iron, by grade, are published by the Bureau of Mines in its Minerals Yearbook. These data are reprinted in table 6A-5 and differ from the data reported in the census in that they include the tonnages of pig iron produced and consumed in the same establishment. Other differences of minor consequence also exist.

3313--ELECTROMETALLURGICAL PRODUCTS

This industry comprises establishments primarily engaged in manufacturing ferro and nonferrous additive alloys by electrometallurgical processes, including high percentage ferroalloys and high percentage nonferrous additive alloys. For a detailed list of products of industry 3313, refer to table 6A, product codes 3313111 to 3313498.

The code number as well as the definition of this industry was unchanged between 1963 and 1967.

Value of shipments and other receipts of the Electrometallurgical Products Industry in 1967 totaled $468 million. This included shipments of electrometallurgical products (primary products), valued at $398 million.

This industry's shipments of electrometallurgical products (primary products) in 1967 represented 85-90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 85-90 percent.

Industry 3313 shipments of electrometallurgical products (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $483 million shipped by all industries. In 1963, the coverage ratio was 77 percent. Other industries shipping electrometallurgical products (primary products) consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $63 million.

3315--STEEL WIREDRAWING AND STEEL NAILS AND SPIKES

This industry comprises establishments primarily engaged in drawing wire from purchased iron or steel rods, bars, or wire and which may be engaged in the further manufacture of products made from wire; and those primarily engaged in manufacturing steel nails and spikes from purchased material. Rolling mills engaged in the production of ferrous wire from wire rods or hot rolled bars produced in the same establishment are classified in industry 3312. Establishments primarily engaged in drawing nonferrous wire are classified in Group 335. For a detailed list of products of industry 3315, refer to table 6A, product codes 3315111 to 3315998.

The code number as well as the definition of this industry was unchanged between 1963 and 1967.

Value of shipments and other receipts of the Steel Wire and Related Products Industry in 1967 totaled $845 million. This included shipments of steel wire and related (primary products), valued at $738 million, shipments of other products (secondary products) valued at $80 million, and miscellaneous receipts (mainly receipts for resales) of $27 million.

This industry's shipments of steel wire and related products (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent.

Industry 3315 shipments of steel wire and related products (primary products) in 1967 represented 37 percent (coverage ratio) of these products valued at $2,004 million shipped by all industries. In 1963, the coverage ratio was 30 percent. Other industries shipping steel wire and related products (primary products) consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $667 million; and industry 3481, Miscellaneous Fabricated Wire Products, $486 million.

3316--COLD ROLLED STEEL SHEET, STRIP, AND BARS

This industry comprises establishments primarily engaged in (1) cold rolling steel sheets and strip from purchased hot rolled sheets; (2) cold drawing steel bars and steel shapes from purchased hot rolled steel bars; and (3) producing other cold finished steel. Establishments primarily engaged in the production of steel, including hot rolled steel sheets, and further cold rolling such sheets are classified in industry 3312.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Cold Finishing of Steel Shapes Industry in 1967 totaled $1,039 million. This included shipments of cold rolled steel, shapes (primary products), valued at $913 million, shipments of other products (secondary products) valued at $109 million, and miscellaneous receipts of $17 million.

This industry's shipments of cold rolled sheet, strip, and bars (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent.

Industry 3316 shipments of cold rolled steel shapes (primary products) in 1967 represented 24 percent (coverage ratio) of these products valued at $3,809 million shipped by all industries. In 1963, the coverage ratio was 20 percent. Other industries shipping cold rolled sheet, strip, and bars (primary products) consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $2,864 million.

3317--STEEL PIPE AND TUBES

This industry comprises establishments primarily engaged in the production of welded or seamless steel pipe and tubes and heavy riveted steel pipe from purchased materials. Establishments primarily engaged in the production of steel, including steel skelp or steel blanks, tube rounds, or pierced billets are classified in industry 3312.

The code number as well as the definition of this industry was unchanged between 1963 and 1967.

Value of shipments and other receipts of the Steel Pipe and Tubes Industry in 1967 totaled $1,149 million. This included shipments of steel pipe and tubes (primary products), valued

at $995 million, shipments of other products (secondary products) valued at $118 million, and miscellaneous receipts (mainly receipts for resales) of $36 million.

This industry's shipments of steel pipe and tubes (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent.

Industry 3317 shipments of steel pipe and tubes (primary products) in 1967 represented 38 percent (coverage ratio) of these products valued at $2,629 million shipped by all industries. In 1963, the coverage ratio was 37 percent. Other industries shipping steel pipe and tube (primary products) consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $1,554 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For each of the industries included in this report, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3312 was 200, 161, and 148, respectively; in industry 3313: 21, 20, and 19; industry 3315: 200, 171, and 151; industry 3316: 77, 59, and 58; industry 3317: 123, 114, and 112. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The value of shipments and cost of materials for this industry include extensive duplications arising from shipments between establishments in the same industry classification. For further explanations see text.

[4]Definitions are as follows: Fully integrated works are establishments having coke ovens, blast furnaces, steel works, and rolling and finishing mills or a forging department; partially integrated works with blast furnaces are establishments having blast furnaces, steel works, and rolling and finishing mills or a forging department; partially integrated works without blast furnaces are establishments having steel works, and rolling and finishing mills or a forging department; nonintegrated works represent all other types of establishments in this industry including beehive coke ovens, byproduct coke ovens operated independently of blast furnaces and steel departments; merchant blast furnaces, and establishments with hot-rolling and finishing operations. In a few cases, operations which are, in fact, fully integrated, are classified as partially integrated or nonintegrated because separate establishment reports were collected either because the operations are conducted in different cities or towns, or the company treats the operations separately for their own administrative reasons.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. X Not applicable. NA Not available. D Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[3]See table 1A, footnote 4 for definitions of these subindustries.

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]There is substantial duplication in value of shipments and cost of materials. (See introductory text). Specialization and coverage ratio are not meaningful because of such duplication.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [c]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]See table 1, footnote 4 for definitions of these industries.

[3]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1] The value of shipments for the industry in 1967 totaled $19,621 Million. This value, however, includes duplication in that the products of some establishments are used as materials by others. See text for fuller explanation. Specialization ratio computed on the basis of net value of shipments would approximate 94 percent. A coverage ratio for this industry cannot be precisely computed. However, such a ratio would exceed 84 percent. Comparable ratios for 1963 were: specialization, 94 percent; coverage, 86 percent.

[2] Miscellanous receipts are included with secondary products.

[3] Includes a small amount of primary products made in other industries to avoid disclosing individual company figures. This amount, however, contributes less than 2 percent of the total.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

[1]The value of shipments of industry 3312 includes duplication in that the products of some establishments are used as materials by others. For 1967, it is estimated that the duplication amounted to 2.9 billion and, accordingly, a net value of shipments would total 16.7 billion. See text for fuller explanations.

[2]Includes total for product class 33919, Open die forgings, made in steel forgings and other industries which are primary to industry 3391.

[3]The totals for product classes 33151, 33156, 33157, and 33159 include respectively the totals for product classes 34811, 34816, 34814, and 34819, which are primary to industry 3481, Fabricated Wire Products, N.E.C. . Shipments of these product classes totaled as follows:

Product Class	Value (million dollars)
34811	81.8
34816	38.8
34814	41.0
34819	324.1

[4]Includes, where appropriate, values for those 4-digit product groups for which either the symbol "D" or a value range, e.g. (2-5), (under 2), , etc. appear above.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

3317- --	STEEL PIPE AND TUBES, TOTAL[5]	(X)	2,629.1	(X)	1,887.5

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]From 10 to 30 percent of this figure was estimated.

[1]Excludes quantities produced in byproduct coke ovens operated in conjunction with utilities manufacturing and distributing gas.

[2]Data for product code 3312183 included with product codes 3312192, 3312193 and 3312194.

[3]Excludes shipments of steel processed on a conversion basis for nonsteel producing companies. Detailed data by shape and grade and net shipments figures appear in tables 6A-2, 6A-3 and 6A-4.

[4]These figures are not strictly comparable with tonnage shipments shown in Current Industrial Reports Series MA-33C, Commerical Steel Forgings in that the latter includes only forgings for sale, wheras the 1967 and 1963 Censuses of Manufactures include interplant transfers of forgings. Accordingly, a direct comparison with the monthly Current Industrial Reports Series is not possible. Forgings produced and consumed within the same plant are not included in either the census of the Current Industrial Reports figures. The estimated annual totals reported in the Current Industrial Reports survey for commercial steel forgings were as follows:

Item	1967 (1,000 short tons)	1963 (1,000 short tons)
Open die hammer and press forgings:		
Carbon	187.9	156.1
Alloy (including stainless)	211.9	219.9

[5]For detailed data, See Products of Industry 3312, above.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Excludes receipts and shipments of steel processed on a conversion basis for nonsteel producing companies. Receipts data represent receipts at producing mills only but include receipts from both domestic and foreign sources.

[2]Transfers to other plants of the same company are included with shipments to other companies. Such transfers constituted between 15 and 30 percent of carbon steel electrical sheets and strip, carbon steel wire rope and cable, alloy steel wire rods, and alloy steel electrical sheets and strip. For all other cases such transfers constitute less than 5 percent of the total.

[3]Represents the quantity and value of shipments by steel works and wire drawing plants. Total shipments of these products by all establishments in 1967 are shown in table 6A-1.

[1]Excludes receipts and shipments of steel processed on a conversion basis for nonsteel producing companies. Receipts data represent receipts as producing mills only but include receipts from both domestic and foreign sources.

[2]Transfers to other plants of the same company are included with shipments to other companies. Such transfers constitute less than 5 percent of the total.

[3]Represents the quantity and value of shipments by steel works and wire drawing plants. Total shipments of these products by all establishments in 1963 are shown in table 6A.

[1]Net shipments are derived by subtracting the steel mills' receipts of each steel mill shape from the total of shipments to other companies, transfers to other plants, and tonnage consumed in steel mills in the production of fabricated products and as maintenance, repair, and operating supplies. For practical purposes, net shipments amount to zero for some products. Due to material in transit, this results in negative figures for a few items. Where products are grouped together for calculation of net shipments, some of the individual products within the group may represent negative figures. In such cases, the negative figures for the individual products were subtracted from the net shipments of the other products and an overall net shipments total is shown.

[2]Represents wire products produced within steel works and wire drawing establishments.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Includes total for product class 33919, Open die hammer and press forgings (produced from purchased materials), which is primary to industry 3391.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

For 1963, materials consumed data for industry 3312, Blast Furnaces and Steel Mills, were published separately by subindustry. For 1967, such data were not separately tabulated. Subindustry data for 1963 appear in Volume II, 1963 Census of Manufactures, in table 7A.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Total cost of materials, etc., contains extensive duplication. This duplication arises because the products of some establishments are used as materials by other establishments in the same industry. For the industry as a whole, the extent of this duplication is approximated by totaling the cost of pig iron, ingots, and semifinished shapes purchased for further processing. Estimated unduplicated cost of materials obtained by this method is $7,061 million. The comparable 1963 figure was $5,923 million.

[2]Included with material code 970099, "All other materials and components, parts, containers, and supplies consumed," to avoid disclosing figures of individual companies.

[3]In addition, pig iron produced and consumed in the same establishment in 1967 was 70,547 thousand short tons. In 1963, the comparable figure was 56,369 thousand short tons.

[4]In addition, 214 thousand short tons of ferromanganese were produced and consumed in the same establishment in 1967. The comparable figure for 1963 was 56 thousand short tons.

[5]Excludes spiegeleisen produced and consumed in the same establishment.

[6]In addition, 14 thousand short tons of other ferroalloys were produced and consumed in the same establishment in 1967. The comparable figure for 1963 was 16 thousand short tons.

[7]Excludes sulfuric acid produced and consumed in the same establishment.

[8]In addition, 10,981 million cubic feet of oxygen were produced and consumed in the same establishment in 1967. For 1963 the comparable figure was 9,613 million cubic feet.

[9]Excludes gray iron ingot molds produced and consumed in the same establishment.

[10]For 1967, includes cost of manganese ore, aluminum and aluminum-base alloy scrap and dross and dead-burned magnesia. For 1963, includes cost of manganese ore, aluminum and aluminum-base alloy scrap and dross nickel, tin, lead, dead-burned magnesia, gray iron ingot molds, limestone, lime, fluorspar, and other fluxes.

[11]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

IRON AND STEEL FOUNDRIES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3321--Gray Iron Foundries
3322--Malleable Iron Foundries
3323--Steel Foundries

For these industries, captive production (that is, the tonnage of castings produced for incorporation into the final product of the plant or company) is a particularly important factor. Distinction is made between rough castings and castings which are machined or further processed and incorporated into other products. The removal of gates, risers, sprues, and tumbling, dipping, and sand blasting, do not constitute machining. Plants primarily engaged in manufacturing castings are included in the foundry industries; plants primarily engaged in further processing castings into parts for metal products or machinery are classified in other major groups.

For the 1967 Census of Manufactures separate establishment reports were received from commercial (jobbing) foundries and from those captive foundries which were operated as separate establishments by the reporting companies. These two groups comprise the types of establishments included in industries 3321, 3322, and 3323. However, where the captive foundry operation was completely integrated with the operation of the entire plant, no separate establishment report was received for the foundry activity. In these instances, data were obtained on the tonnage of castings produced and consumed and on the number of employees usually engaged in the captive foundry operation. However, establishments with such foundry departments were classified on the basis of the plant's final product and accordingly, the general statistics on employment, payrolls, cost of materials, etc., are included in the data for such industries as plumbing fixtures (3431), and farm machinery and equipment (3522), etc.

The data shown in table 6A on shipments of transfers of iron and steel castings represent total shipments and transfers including the quantity of castings shipped by establishments classified in industries other than the foundry industries (3321, 3322, and 3323). For those industries where captive foundry departments are particularly important, data on the tonnage of castings produced and consumed are shown in table 7 of the individual industry reports covering the specific industries.

During 1967, the Bureau of the Census also collected and published monthly data on shipments of iron and steel castings. These monthly data were derived from a sample survey and were published in Current Industrial Reports Series M33A, Iron and Steel Castings. The M33A series includes data for both commercial and captive foundry production and shows separately shipments "for sale" and shipments "for own use."

It should be specifically noted that the value data on shipments of iron and steel castings in table 6A do not include the value of the large quantity of castings produced by establishments classified in other industries which produce castings only for incorporation into their own products or for internal use but not for sale as such.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3321--GRAY IRON FOUNDRIES

This industry comprises establishments primarily engaged in manufacturing gray iron castings, including cast iron pressure and soil pipes and fittings. For a detailed list of products of industry 3321, refer to table 6A, product codes 3321111 to 3321498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Gray Iron Foundries Industry in 1967 totaled $2,638 million. This included shipments of gray iron castings (primary products), valued at $2,365 million, shipments of other products (secondary products) valued at $180 million, and miscellaneous receipts (mainly receipts for resales) of $92 million.

This industry's shipments of gray iron castings (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 93 percent. Secondary products shipped by this industry in 1967 included malleable iron castings ($25 million), and steel castings ($21 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 96 percent of the total industry shipments are represented by plants specializing in product classes; 71 percent in miscellaneous gray iron castings.

Industry 3321 shipments of gray iron castings (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $2,740 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping gray iron castings (primary products) consisted mainly of Industry 3312, Blast Furnaces and Steel Mills, $132 million; and Industry 3714, Motor Vehicle Parts and Accessories, $59 million.

3322--MALLEABLE IRON FOUNDRIES

This industry comprises establishments primarily engaged in manufacturing malleable iron castings. For a detailed list of products of industry 3322, refer to table 6A, product codes 3322021 to 3322031.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Malleable Iron Foundries Industry in 1967 totaled $438 million. This included shipments of malleable iron castings (primary products), valued at $370 million, shipments of other products (secondary products) valued at $65 million, and miscellaneous receipts (mainly receipts for resales) of $3 million.

This industry's shipments of malleable iron castings (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent.

Industry 3322 shipments of malleable iron castings (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $417 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping malleable iron castings (primary products) included Industry 3321, Gray Iron Foundries, $25 million.

3323--STEEL FOUNDRIES

This industry comprises establishments primarily engaged in manufacturing steel castings. For a detailed list of products of industry 3323, refer to table 6A, product codes 3323163 to 3323359.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Steel Foundries Industry in 1967 totaled $1,213 million. This included shipments of steel castings (primary products), valued at $1,074 million, shipments of other products (secondary products) valued at $116 million, and miscellaneous receipts (mainly receipts for resales) of $23 million.

This industry's shipments of steel castings (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent. Secondary products shipped by this industry in 1967 included metalworking machinery, n.e.c. ($24 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 98 percent of the total industry shipments are represented by plants specializing in product classes; 55 percent in other carbon steel castings; and 28 percent in other alloy steel castings.

Industry 3323 shipments of steel castings (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $1,210 million shipped by all industries. In 1963, the coverage ratio was also 89 percent. Other industries shipping steel castings (primary products) included Industry 3312, Blast Furnaces and Steel Mills, $30 million; and Industry 3321, Gray Iron Foundries, $21 million.

Note: In 1967, 1963, and 1958, the number of companies in industry 3321 was 969, 1,062 and 1,211, respectively; in industry 3322: 72, 76, and 74; industry 3323: 256, 222, and 210. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under $50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Standard Note: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.) - Represents zero.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard Notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Differs from the tonnage figures published in Current Industrial Reports Series M33A "Iron and Steel Castings" in that no figures are included above for castings produced by captive foundry departments of plants classified in other industries. As shown in the Current Industrial Report captive production ("for own use") including both interplant transfers and castings produced and consumed by the same plant for 1967 totaled as follows: gray iron castings, 6,929 thousand tons; malleable iron castings, 427 thousand tons; and steel castings, 301 thousand tons. Of this total only the following tonnages transferred to other plants are included above: gray iron castings 2,973, thousand tons; malleable iron castings, 284 thousand tons; and steel castings 70 thousand tons. The differences between the tonnages shown above for "shipments to other companies" and the "for sale" figures in series M33A are due to differences in classification in the census and monthly survey with regard to such products as machinery parts, etc., and fiscal year reports in the census.

[2]Figures for transfers to other plants of the same company are included with "shipments to other companies" to avoid disclosing operations of individual companies.

[3]Heat and/or corrosion-resistant steel castings containing 8 percent more of chromium or nickel, or both with or without molybdenum or other elements.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a seperate subject chapter titled "Selected Metalworking Operation"

SMELTING AND REFINING OF NONFERROUS METALS AND ALLOYS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3331--Primary Smelting and Refining of Copper
3332--Primary Smelting and Refining of Lead
3333--Primary Smelting and Refining of Zinc
3334--Primary Production of Aluminum
3339--Primary Smelting and Refining of Nonferrous Metals, Not Elsewhere Classified
3341--Secondary Smelting and Refining of Nonferrous Metals

Industries in this group produce primary and secondary nonferrous metals and alloys from ores and concentrates and from scrap. The five primary industries (3331 to 3339) are chiefly engaged in extracting metals from ores, concentrates, precipitates, etc. They include (1) establishments which perform smelting operations only and produce metals such as blister copper and lead base bullion, that are not yet of commercial grades; (2) establishments which refine the products of the smelters and produce commercially pure metal; and (3) those which produce refined metals from the ores and concentrates in a single continuous operation. These industries do not include milling or concentrating operations since these are generally located at mine sites and are considered as mineral operations rather than manufacturing activities. Such operations are covered in the 1967 Census of Mineral Industries (Major Group 10--Metal Mining). Also excluded are establishments which produce alumina from bauxite and those which process ores and concentrates primarily for the purpose of producing chemicals, such as zinc oxide. Such establishments are included in the chemical group of manufacturing industries. Primary smelters and refiners may also produce considerable quantities of such chemicals as sulfuric acid, zinc oxide, etc.

Inasmuch as many of the companies in the smelting and refining field operate their own mines and milling and concentrating plants, it has been difficult to establish a satisfactory value of the ore or concentrate transferred from the mine to the smelter. In an effort to achieve uniformity and to conform to reporting by smelters purchasing ore from other companies, the instructions accompanying the 1967 and 1963 report forms specified that such transfers should be reported at an approximate commercial value. In practice, this instruction was not feasible in all cases. In some instances there does not exist a comparable commercial form of the ore or concentrate transferred and in others, to convert to an approximate commercial value would have been unrealistic in view of the actual operations of the various establishments of an integrated company.

Since censuses of manufactures and of mineral industries were being conducted at the same time for 1967 and 1963, it was possible to check the reasonableness of the values of ores and concentrates transferred from mine and mill to smelter as reported by integrated companies. In a number of instances, the value f.o.b. mine and mills reported on the minerals form exceeded the cost of this material shown as an input on the manufactures report, whereas the latter figure should exceed the mine value by approximately the transportation and handling costs. In such cases, the respondent was queried and more reasonable value and cost figures were obtained. These adjustments usually resulted in increased cost figures on the manufactures report, and consequently, reduced the computed "value added by manufacture."

In addition to the integration of mine and smelter, some companies operate both smelting and refining facilities while some are fully integrated from mine through refinery. The transfer of blister copper to refineries operated by the same company was often reported at other than commercial value for the reasons cited above. However, inasmuch as both the smelter and refinery are classified in the same industry, these estimated value figures do not cause a distortion of "value added" for the industry as a whole. However, the commodity data on shipments of smelter product and materials data on the consumption of these items are affected. For the copper industry, separate data are shown below for smelters and for refineries. These data must also be interpreted in the light of these limitations.

While a few companies transfer their refined product to fabricating plants under their own ownership, the effect of transfer values on the total figures is much less in this area. Often, while the refinery and fabricating plants may be under the same general financial control, the organizations are so distinct that the transfer of materials is made on the same basis as a commercial transaction.

For industries 3331 to 3339, toll processing is a particularly important activity and a considerable portion of the metal produced is handled on this basis, i.e., is processed by the smelter or the refinery for the owner of the metal for a fee. The fee may be a money payment or may be a combination of a money payment and a provision that the processing plant keep some of the metal. For both the 1967 and 1963 censuses of manufactures, no distinction was made between the plant's shipments of products produced from its own material and the shipments of metal retained as part of the fee for toll processing. However, separate data were reported for the metal returned to toll customers and for the fees received for toll processing.

Data on the tonnages of metals produced by plants engaged in primary smelting and refining of nonferrous metals are published annually by the Bureau of Mines of the U.S. Department of Interior in its Mineral Yearbook. Minor variations exist between the data shown here and those published by the Bureau of Mines. In addition to minor differences occurring from the submittal of separate reports to different agencies, reasons for the variation are the use by the Bureau of the Census of gross weight as contrasted with metal content by the Bureau of Mines for some metals and adjustments made by the Bureau of Mines for the amount of metal estimated as produced from scrap instead of ores or concentrates.

In general, the same definitions were used by the Bureau of the Census in the collection of product statistics as are used by the Bureau of Mines. In particular, it might be noted that the tonnages of refined lead and copper, produced by plants making refined lead and copper directly from ores and concentrates, are included in the lead base bullion and blister copper figures to arrive at a balance between the blister copper and refined copper figures and base bullion and refined lead figures. These tonnages have been considered as blister copper and lead base bullion produced and consumed in the same plant.

The production and shipments data shown in table 6A represent total production from materials of both domestic and foreign sources. The production and shipment figures shown for primary smelters and refiners include the production from scrap as well as from primary sources such as ores, concentrates, etc. A measure of the extent of secondary production by primary smelters and refiners is shown in table 7A which contains information on the quantity of scrap consumed. Also, a certain amount of the duplication arises if the data shown in table 6A for unalloyed and alloyed metals are combined in that unalloyed metals are consumed by secondary smelters in producing metal alloys. This duplication can be measured by reference to the quantities of unalloyed metal consumed by secondary plants shown in table 7A.

Data on the production of selected nonferrous metals by industry are presented in table 6A. These production data include quantities produced for sale, for interplant transfer, and for further consumption within the producing plant as well as toll production. However, the coverage ratios shown in table 5A are based on dollar value of shipments (including transfers to other plants of the company) but exclude the value of nonferrous metals produced and consumed within the same plant as well as shipments of metals produced for other companies on a toll basis.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as a secondary product by establishments classified in other industries.

3331--PRIMARY SMELTING AND REFINING OF COPPER

This industry comprises establishments primarily engaged in smelting copper from the ore, and in refining copper by electrolytic or other processes. Establishments primarily engaged in rolling, drawing, or extruding copper are classified in industry 3351. For a detailed list of products of industry 3331, refer to table 6A, product codes 3331111 to 3331215.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Inasmuch as this industry includes both establishments smelting copper from ore, concentrates, etc., and establishments refining copper by electrolytic or other processes, the total cost of materials and the total value of shipments for this industry include extensive duplication resulting from the use of the products of the smelters as materials for the refiners. Thus, the value of blister copper, which represents an intermediate stage in the production of refined copper, appears twice in the total value of shipments and a corresponding duplication enters into the total cost of materials.

This problem of duplication is largely eliminated by treating smelters and refiners separately and by presenting individual figures for each group. The following table shows separate general statistics--employment, value added, value of shipments, etc., for the smelters and for the refiners of copper. In order to have the necessary data to prepare this table, where the smelting and refining operations at a single location are distinctly separate stages in the production of the metal, separate reports for smelting and refining departments were obtained. When separate smelting and refining stages are not necessary, such as in the case with copper produced by leaching and the production of Lake Superior copper, the establishments have been classified as refiners.

The specialization and coverage ratios for industry 3331 have not been calculated because there is extensive duplication. This duplication is the result of products of some establishments being used as materials by other establishments in the same industry.

Value of shipments and other receipts of the Primary Copper Industry in 1967 totaled $1,184 million. This included shipments of primary copper (primary products), valued at $1,019 million, shipments of other products (secondary products) valued at $82 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $84 million.

3332--PRIMARY SMELTING AND REFINING OF LEAD

This industry comprises establishments primarily engaged in smelting lead from the ore, and in refining lead by any process. Establishments primarily engaged in rolling, drawing, or extruding lead are classified in industry 3356. For a detailed list of products of industry 3332, refer to table 6A, product codes 3332111 to 3332398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

The specialization and coverage ratios for industry 3332 have not been calculated because there is extensive duplication. This duplication is the result of products of some establishments being used as materials by other establishments in the same industry.

Value of shipments and other receipts of the Primary Lead Industry in 1967 totaled $304 million.

3333--PRIMARY SMELTING AND REFINING OF ZINC

This industry comprises establishments primarily engaged in smelting zinc from the ore, and in refining zinc by any process. Establishments primarily engaged in rolling, drawing, or extruding zinc are classified in industry 3356. For a detailed list of products of industry 3333, refer to table 6A, product codes 3333111 to 3333461.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Primary Zinc Industry in 1967 totaled $333 million. This included shipments of primary zinc, valued at $275 million, shipments of other products (secondary products) valued at $36 million, and miscellaneous receipts of $22 million.

This industry's shipments of primary zinc in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 included industrial inorganic chemicals, n.e.c. ($8 million).

Industry 3333 shipments of primary zinc (primary products) in 1967 represented 81 percent (coverage ratio) of these products valued at $339 million shipped by all industries. In 1963, the coverage ratio was also 81 percent. Other industries shipping refined zinc (primary products) consisted mainly of industry 3341, Secondary Nonferrous Metals, $52 million.

3334--PRIMARY PRODUCTION OF ALUMINUM

This industry comprises establishments primarily engaged in producing aluminum from alumina, and in refining aluminum by any process. Establishments primarily engaged in rolling, drawing, or extruding aluminum are classified in industry 3352. For a detailed list of products of industry 3334, refer to table 6A, product codes 3334711 to 3334811.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Primary Aluminum Industry in 1967 totaled $1,609 million. This included shipments of primary aluminum (primary products), valued at $1,536 million, shipments of other products (secondary products) valued at $44 million, and miscellaneous receipts of $29 million.

This industry's shipments of primary aluminum (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 100 percent.

Industry 3334, shipments of primary aluminum (primary products) in 1967 represented 78 percent (coverage ratio) of these products valued at $1,964 million shipped by all industries. In 1963, the coverage ratio was 75 percent. Other industries shipping aluminum ingot and extrusion billet (primary products) consisted mainly of industry 3341, Secondary Nonferrous Metals, $326 million; and industry 3352, Aluminum Rolling and Drawing, $86 million.

3339--PRIMARY SMELTING AND REFINING OF NONFERROUS METALS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in smelting and refining nonferrous metals, not elsewhere classified. Establishments primarily engaged in rolling, drawing, and extruding these nonferrous primary metals are classified in industry 3356, and the production of bullion at the site of the mine is classified in the mining industries. For a detailed list of products of industry 3339, refer to table 6A, product codes 3339511 to 3339792.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Primary Nonferrous Metals, N.E.C., Industry in 1967 totaled $284 million. This included shipments of primary nonferrous metals, n.e.c. (primary products), valued at $246 million, shipments of other products (secondary products) valued at $27 million, and miscellaneous receipts (mainly resales) of $11 million.

This industry's shipments of primary nonferrous metals, n.e.c. (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent.

Industry 3339 shipments of primary nonferrous metals, n.e.c. (primary products) in 1967 represented 40 percent (coverage ratio) of these products valued at $619 million shipped by all industries. In 1963, the coverage ratio was 39 percent. Other industries shipping primary nonferrous metals, n.e.c. (primary products) included industry 3341, Secondary Nonferrous Metals, $174 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3339, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3341--SECONDARY SMELTING AND REFINING OF NONFERROUS METALS

This industry comprises establishments primarily engaged in recovering nonferrous metals and alloys from new and used scrap and dross, but which are not engaged in further fabrication. This industry includes establishments engaged in both the recovering and alloying of precious metals. Plants engaged in the recovery of tin through secondary smelting and refining, as well as by chemical processes, are included in this industry. Establishments primarily engaged in assembling, sorting, and breaking up scrap metal, without smelting and refining are classified in trade industries. For a detailed list of products of industry 3341, refer to table 6A, product codes 3341211 to 3341811.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Secondary Nonferrous Metals Industry in 1967 totaled $1,586 million. This included shipments of secondary nonferrous metals (primary products), valued at $1,080 million, shipments of other products (secondary products) valued at $135 million, and miscellaneous receipts (mainly resales) of $371 million.

This industry's shipments of secondary nonferrous metals (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 29 percent of the total industry shipments are represented by plants specializing in product class 33412, Secondary copper; and 23 percent in 33417, Aluminum ingot.

Industry 3341 shipments of secondary nonferrous metals (primary products) in 1967 represented 26 percent (coverage ratio) of these products valued at $4,134 million shipped by all industries. In 1963, the coverage ratio was also 26 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3341, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture. Industries 3331, 3332, 3333 and 3334 had no such cases.

Note: In 1967, 1963, and 1958, the number of companies in industry 3331 was 11, 13, and 11, respectively; in industry 3332: 10, 6, and 5; industry 3333: 11, 11, and 11; industry 3334: 8, 7, and 6; industry 3339: 41, 32, and 24; industry 3341: 351, 406, and 349. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The value of shipments and cost of materials for this industry include substantial duplication.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]Specialization and coverage ratios have not been calculated for industries 3331, Primary Copper, and 3332, Primary Lead, because the shipments of primary products for these industries contain extensive duplication.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1] Report forms were not mailed to companies that operated only one establishment which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1]Specialization and coverage ratios have not been calculated for industries 3331, Primary Copper, and 3332, Primary Lead, because the shipments of primary products for these industries contain extensive duplication.

[2]Included in this industry is refined zinc which is also primary to industry 3341, Secondary Nonferrous Metals. A coverage ratio for 1967 computed on the basis of including both industries to which refined zinc is primary would total 96 percent; 81 percent by industry 3333 and 15 percent by industry 3341. The remainder was shipped by establishments in other industries. The 1963 percentages are the same as those for 1967.

[3]Included in this industry are aluminum-base alloys which are also primary to industry 3341. Secondary Nonferrous Metals, and industry 3352, Aluminum Rolling and Drawing. A coverage ratio for 1967 computed on the basis of including all three industries to which aluminum-base alloys are primary would total 99 percent; 78 percent by industry 3334, 17 percent by industry 3341, and 4 percent by industry 3352. The remainder was shipped by establishments in other industries. The comparable 1963 percentages are as follows: 96 percent, total; 75 percent, SIC 3334; 17 percent, SIC 3341; and 4 percent, SIC 3352.

[4]Included in this industry are refined nonferrous alloys, n.e.c., which are also primary to industry 3341, Secondary Nonferrous Metals. A coverage ratio computed on the basis of including both industries to which refined nonferrous alloys, n.e.c., are primary would total 68 percent; 40 percent by industry 3339, and 28 percent by industry 3341. The remaining 32 percent was shipped by establishments classified in other industries. The comparable 1963 percentages are as follows: 59 percent, total; 39 percent, SIC 3339; and 20 percent, SIC 3341.

[5]Included in this industry are refined copper, lead, zinc, aluminum, precious metals, and other nonferrous metals. Each of these product classes is also primary to the comparable primary smelting and refining industry in Group 333. A coverage ratio computed on the basis of including both industries to which the classes are primary would total 89 percent; 26 percent by industry 3341, and 63 percent by primary nonferrous smelters and refiners. The remaining 11 percent was shipped by establishments in other industries. The 1963 percentages are the same as those for 1967.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Includes shipments of these products produced on a toll basis by others. Where data are shown separately for the various industries producing these products, such shipments are included in the industry for the establishment owning the material. However, production data are included in the industry of the toll producer.

[2]Includes toll production.

[3]Includes shipments to other smelters and refiners, shipments to consumers and to some nonmanufacturing companies which sell directly to consumers.

[4]Includes antimonial lead, babbitt metal, solder, type metal and other lead and tin-base alloys.

[5]Most of the aluminum ingot and billet (alloys) produced by aluminum rolling mills represent duplication of tonnages reported by the Primary Aluminum Industry (3334), in that the metal produced by the rolling mills is made from ingot produced in primary aluminum plants.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[2]Includes product class 33412, Secondary copper, (ingot, shot, etc.), made by secondary smelters, which is primary to industry 3341.

[3]Includes product class 33413, Secondary lead (ingot, shot, etc.), made by secondary smelters, which is primary to industry 3341.

[4]Includes product class 33414, Secondary zinc (ingot, shot, etc.), made by secondary smelters, which is primary to industry 3341.

[5]Includes product class 33417, Aluminum ingot, produced by secondary nonferrous smelters, which is primary to industry 3341 and product class 33527, Aluminum ingot, produced in aluminum rolling mills, which is primary to industry 3352.

[6]Includes product class 33418, Aluminum extrusion billet, produced by secondary smelters, which is primary to industry 3341, and 33528, Aluminum extrusion billet, produced in aluminum rolling mills, which is primary to industry 3352.

[7]Includes product class 33415, Precious metals, produced by secondary refineries (pig ingot, shot, etc.), which is primary to industry 3341.

[8]Includes product class 33416, Other secondary nonferrous metals (pig, ingot, shot, etc.) shipped by secondary smelters, which is primary to industry 3341.

[9]The product classes within industry 3341 include the values for the comparable product class for the specified metal for Industry Group 333- as listed below. The total for 3341- includes all such product classes. Also, product class 33417 includes 33527, Aluminum ingot, and product class 33418 includes 33528, Aluminum extrusion billet, both made in aluminum rolling mills which are primary to industry 3352. 33412 comparable to 33312; 33413 comparable to 33323; 33414 comparable to 33334; 33415 comparable to 33395; 33416 comparable to 33397; 33417 comparable to 33347; 33418 comparable to 33348.

[1]Smelting and refining establishments were instructed to include in their reports the quantity and cost of purchased materials which they processed or furnished to others for toll processing, but to exclude materials processed on a toll basis for others. Accordingly the data shown in this table exclude considerable quantities of materials consumed by establishments in this industry in the production of the products shown in table 3.

[2]The cost of materials for this industry includes extensive duplication. This duplication arises because the products of some establishments are used as materials by other establishments in the same industry.

[3]Includes leaching ores received in crude form from mines by leaching plants operated in conjunction with smelting and refining operations. Such ores represent about half the total quantity of ores, concentrates and precipitates consumed but about 15 percent of the value of these materials.

[4]Excludes materials consumed by establishments producing copper by leaching or from Lake Superior ores as no distinct blister stage exists in the production at these establishments.

[5]Included with material code 970099, "All other materials and components, parts, containers, and supplies consumed," to avoid disclosing figures for individual companies.

[6]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments, and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

NONFERROUS METAL MILL AND FOUNDRY PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3351--Rolling, Drawing, and Extruding of Copper
3352--Rolling, Drawing, and Extruding of Aluminum
3356--Rolling, Drawing, and Extruding of Nonferrous Metals, Except Copper and Aluminum
3357--Drawing and Insulating of Nonferrous Wire
3361--Aluminum Castings
3362--Brass, Bronze, Copper, Copper Base Alloy Castings
3369--Nonferrous Castings, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3351--ROLLING, DRAWING, AND EXTRUDING OF COPPER

This industry comprises establishments primarily engaged in rolling, drawing, and extruding copper, brass, bronze, and other copper-base alloy basic shapes, such as plate, sheet, strip, bar, and tubing. Establishments primarily engaged in recovering copper and its alloys from scrap or dross are classified in industry 3341.

This industry includes a variety of operations ranging from rod, wire, tube, and flat product mills to machine shop and fabricating activities. Accordingly, in order to provide a measure of the relative importance of these departments, data were collected on man-hours worked and production worker wages paid for each of several departments. The resulting data are shown in table 9.

Also, based on the data reported for these various departmental operations, it was possible to further classify the establishments of this industry into two "subindustries," i.e., establishments with casting facilities and establishments without casting facilities.

Separate data are shown for these subindustries in tables 1A, 2, 3, 4, and 9. For a detailed list of products of industry 3351, refer to table 6A, product codes 3351111 to 3351238.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Copper Rolling and Drawing Industry in 1967 totaled $2,391 million. This included shipments of rolled and drawn copper (primary products), valued at $2,062 million, shipments of other products (secondary products) valued at $223 million, and miscellaneous receipts of $106 million.

This industry's shipments of rolled and drawn copper (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of rolled drawn and extruded aluminum ($68 million). Other nonferrous rolling and drawing, n.e.c. ($12 million).

Industry 3351 shipments of rolled and drawn copper (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $2,217 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping rolled and drawn copper (primary products) consisted mainly of industry 3357, Nonferrous Wiredrawing and Insulating, $124 million.

3352--ROLLING, DRAWING, AND EXTRUDING OF ALUMINUM

This industry comprises establishments primarily engaged in rolling, drawing, and extruding aluminum and aluminum base alloy basic shapes such as plate, sheet, strip, bar, tubing and foil.

Companies with establishments classified in this industry were queried as to whether or not the company also operated aluminum reduction facilities. Based on this inquiry, it was possible to further classify the establishments into two "subindustries," i.e., establishments operated by primary (integrated) producers, and establishments operated by nonintegrated producers. This subindustry classification system differs significantly from the subindustry definitions used in industries 3312, Blast Furnaces and Steel Mills; 3351, Copper Rolling and Drawing; and 3357, Nonferrous Wire Drawing, Etc., in that the definition for these other primary metal industries are based on the types of facilities existing at each separate establishment.

Separate data are shown for the subindustries of this industry in tables 1A, 4, and 9. For a detailed list of products of industry 3352, refer to table 6A, product codes 3352111 to 3352811.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Aluminum Rolling and Drawing Industry in 1967 totaled $2,959 million. This included shipments of rolled and drawn aluminum (primary products), valued at $2,506 million, shipments of other products (secondary products) valued at $321 million, and miscellaneous receipts (mainly resales) of $132 million.

This industry's shipments of rolled and drawn aluminum (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent. Secondary products shipped by this industry in 1967 included metal foil and leaf ($96 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 46 percent of the total industry shipments are represented by plants specializing in product class 33522, Aluminum plate and sheet (including foil stock).

Industry 3352 shipments of rolled and drawn aluminum (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $2,812 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries shipping rolled and drawn aluminum (primary products) consisted mainly of industry 3357, Nonferrous Wiredrawing and Insulating, $201 million and industry 3351, Copper Rolling and Drawing, $68 million.

3356--ROLLING, DRAWING, AND EXTRUDING OF NONFERROUS METALS, EXCEPT COPPER AND ALUMINUM

This industry comprises establishments primarily engaged in rolling, drawing, and extruding nonferrous metals other than copper (industry 3351), and aluminum (industry 3352). The products of this industry are produced in the form of basic shapes, such as plate, sheet, strip, bar, and tubing. Establishments primarily engaged in recovering nonferrous and alloys from scrap or dross are classified in industry 3341; in manufacturing gold, silver, tin, and other foils except aluminum, in industry 3497; and aluminum foil in industry 3352. For a detailed list of products of industry 3356, refer to table 6A, product codes 3356043 to 3356098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Nonferrous Rolling And Drawing, N.E.C., Industry in 1967 totaled $984 million. This included shipments of rolled and drawn nonferrous metals, n.e.c. (primary products), valued at $854 million, shipments of other products (secondary products) valued at $108 million, and miscellaneous receipts (mainly resales) of $22 million.

This industry's shipments of rolled and drawn nonferrous metals, n.e.c. (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent.

Industry 3356 shipments of rolled and drawn nonferrous metals, n.e.c. (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $1,012 million shipped by all industries. In 1963, the coverage ratio was 81 percent. Other industries shipping rolled and drawn nonferrous metals, n.e.c. (primary products) included industry 3357, Nonferrous Wiredrawing and Insulating, $33 million and industry 3352, Aluminum Rolling and Drawing, $29 million.

3357--DRAWING AND INSULATING OF NONFERROUS WIRE

This industry comprises establishments primarily engaged in drawing, drawing and insulating, and insulating wire and cable of nonferrous metals from purchased wire bars, rods, or wire.

Based on the data reported for various departmental operations, it was possible to classify the establishments into four "subindustries," i.e., establishments with wire drawing department and rod mill, establishments with wire drawing department with neither a rod mill nor an insulating department, establishments with wire drawing and insulating departments but without rod mill, and establishments without a wire drawing department.

The subindustry data shown in tables 1A, 4, and 9 are based on this system of classification. For a detailed list of products of industry 3357, refer to table 6A, product codes 3357111 to 3357900.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Nonferrous Wiredrawing and Insulating Industry in 1967 totaled $3,592 million. This included shipments of nonferrous wiredrawing and insulating products (primary products), valued at $3,248 million, shipments of other products (secondary products) valued at $243 million, and miscellaneous receipts of $101 million.

This industry's shipments of nonferrous wiredrawing and insulating products (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of rolled and drawn aluminum ($201 million) and rolled and drawn copper ($124 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 31 percent of the total industry shipments are represented by plants specializing in product classes 33574, Communication wire and cable.

Industry 3357 shipments of nonferrous wire drawing and insulating products (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $3,651 million shipped by all industries. In 1963, the coverage ratio was 86 percent.

NONFERROUS FOUNDRIES

This group is comprised of three foundry industries, namely industry 3361, Aluminum Castings, industry 3362, Brass, Bronze, Copper Castings, and industry 3369, Nonferrous Castings, N.E.C. These foundry industries comprise establishments primarily engaged in manufacturing aluminum castings, including cast aluminum cooking utensils (3361), brass, bronze, and copper castings including unmachined bearings and bushings (3362), and other nonferrous castings (3369).

For these industries, captive production (that is, the tonnage of castings produced for incorporation into the final product of the plant or company) is a particularly important factor. Distinction is made between rough castings and castings which are machined or further processed and incorporated into other products. The removal of gates, risers, sprues, and tumbling, dipping, and sand blasting do not constitute machining. Plants primarily engaged in manufacturing castings are included in the foundry industries; plants primarily engaged in further processing castings into parts for metal products or machinery are classified in other major groups.

For the 1967 and 1963 census of manufactures separate establishment reports were received from all commercial (jobbing) foundries and from those captive foundries which were operated as separate establishments by the reporting companies. These two groups comprise the types of establishments included in industries 3361, 3362, and 3369. However, where the captive foundry operation was completely integrated with the operations of the entire plant, no separate establishment report was received for the foundry activity. In these instances data were obtained on the tonnage of castings produced and consumed and on the number of employees usually engaged in the captive foundry operation. However, establishments with such foundry departments were classified on the basis of the plant's final product and accordingly, the general statistics on employment, payrolls, cost of materials, etc., are included in the data for such industries as Plumbing Fittings, Brass Goods (3432) and Valves and Pipe Fittings (3494), etc.

The data shown in table 6A-1 for nonferrous castings represent total shipments and transfers including the quantity of castings shipped by establishments classified in industries other than the foundry industries (3361, 3362, and 3369). For those industries where captive foundry departments are particularly important, data on the tonnage of castings

produced and consumed are shown in table 7A of the individual industry reports covering the specific industries.

During 1967 and 1963 the Bureau of the Census also collected and published monthly data on shipments of nonferrous castings. These monthly data were derived from a sample survey and were published in Current Industrial Reports Series M33E, Nonferrous Castings. The M33E series includes data for both commercial and captive foundry production and shows separately shipments "for sale" and shipments "for own use."

It should be specifically noted that the quantity and value data on shipments of nonferrous castings in table 6A-1 do not include the quantity and value of the large quantity of castings produced by establishments classified in other industries which produce castings only for incorporation into their own products or for internal use but not for sale as such.

3361--ALUMINUM CASTINGS

This industry comprises establishments primarily engaged in manufacturing castings and diecastings of aluminum. For a detailed list of products of industry 3361, refer to table 6A product codes 3361011 to 3361075.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Aluminum Castings Industry in 1967 totaled $920 million. This included shipments of aluminum castings (primary products), valued at $753 million, shipments of other products (secondary products) valued at $149 million, and miscellaneous receipts (mainly resales) of $18 million.

This industry's shipments of aluminum castings (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent. Secondary products shipped by this industry in 1967 consisted mainly of nonferrous castings, n.e.c. ($72 million), brass, bronze, and copper castings ($24 million), and special dies, tools, jigs, and fixtures ($22 million).

Industry 3361 shipments of aluminum castings (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $885 million shipped by all industries. In 1963, the coverage ratio was 83 percent. Other industries shipping aluminum castings (primary products) consisted mainly of industry 3369, Nonferrous Castings, N.E.C., $57 million.

3362--BRASS, BRONZE, COPPER, COPPER BASE ALLOY CASTINGS

This industry comprises establishments primarily engaged in manufacturing castings and die castings of copper and copper-base alloy. For a detailed list of products of industry 3362, refer to table 6A, product codes 3362011 to 3362071.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Brass, Bronze, and Copper Castings Industry in 1967 totaled $445 million. This included shipments of brass, bronze, and copper castings (primary products), valued at $355 million, shipments of other products (secondary products) valued at $75 million, and miscellaneous receipts (mainly resales) of $15 million.

This industry's shipments of brass, bronze, and copper castings (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent.

Industry 3362 shipments of brass, bronze, and copper castings (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $432 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping brass, bronze, and copper castings (primary products) consisted mainly of industry 3361, Aluminum Castings, $24 million.

3369--NONFERROUS CASTINGS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing castings and die castings of nonferrous materials, except aluminum, copper, and copper-base alloys. For a detailed list of products of industry 3369, refer to table 6A, product codes 3369151 to 3369998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Nonferrous Castings, N.E.C., Industry in 1967 totaled $556 million. This included shipments of nonferrous castings, n.e.c. (primary products), valued at $453 million, shipments of other products (secondary products) valued at $94 million, and miscellaneous receipts (mainly resales) of $9 million.

This industry's shipments of nonferrous castings, n.e.c. (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 78 percent. Secondary products shipped by this industry in 1967 consisted mainly of aluminum castings ($57 million), and special dies, tools, jigs and fixtures ($17 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 64 percent of the total industry shipments are represented by plants specializing in product class, Zinc and zinc-base alloys.

Industry 3369 shipments of nonferrous castings, n.e.c. (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $551 million shipped by all industries. In 1963, the coverage ratio was 75 percent. Other industries shipping nonferrous castings, n.e.c. (primary products) consisted mainly of industry 3361, Aluminum Castings, $72 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For the industries included in this report, these establishments accounted for approximately the following percentages of payroll and value added by manufacture: industry 3361, 1 percent and 2 percent; industry 3362, 2 percent and 2 percent. For all other industries in this report, less than one percent of payroll and value added were accounted for by administrative records.

Note: In 1967, 1963, and 1958, the number of companies in industry 3351 was 86, 81, and 75, respectively; in industry 3352: 155, 166, and 145; industry 3356: 115, NA, and NA; industry 3357: 206, 210, and 217; industry 3361: 970, 926, and 934; industry 3362: 516, 535, and 647; industry 3369: 352, 386, and 337; industry.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The subindustry separation for industry 3351 is based on the presence of or lack of a department described as "casting (except foundry)." See table 9A.

[4]Integrated producers represent companies which operate primary aluminum reduction facilities.

[5]Separate data were published in the 1963 Census of Manufactures for these three subindustries. However, it was subsequently determined that significant errors in classification had been made. These errors did not affect data for establishments with wire insulating establishments with neither rod mill nor wiredrawing department.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. X) Not applicable. (NA Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Standard Notes: (NA) Not available. n.e.c. Not elsewhere classified.

[1]Included in this industry is aluminum and aluminum-base alloy wire (including ACSR) which is also primary to industry 3357, Nonferrous Wire Drawing, Etc. A coverage ratio computed on the basis of including both industries to which aluminum and aluminum-base alloy wire (including ACSR) is primary, in 1967 would total 95 percent; 89 percent by industry 3352, and 6 percent by industry 3357. The remaining 5 percent was shipped by establishments in other industries. For 1963 the comparable percentages were: 96 percent; 93 percent by industry 3352, and 3 percent by industry 3357. The remaining 4 percent was shipped by establishments in other industries.

[2]Included in this industry is "other nonferrous metal wire," which is also primary to industry 3357, Nonferrous Wire Drawing, Etc. A coverage ratio computed on the basis of including both industries to which nonferrous metal wire is primary in 1967 would total 88 percent; 84 percent by industry 3356, and 4 percent by industry 3357. The remaining 12 percent was shipped by establishments in other industries. For 1963 the comparable percentages were: 85 percent; 81 percent by industry 3356, and 4 percent by industry 3357. The remaining 15 percent was shipped by establishments in other industries.

[3]Included in this industry are aluminum and aluminum-based alloy wire (including ACSR), other nonferrous metal wire, nonferrous woven wire products, and appliance wire and cord and flexible cord sets which are also primary, respectively, to industries 3352, Aluminum Rolling and Drawing; 3356, Rolling and Drawing, Etc.; 3481, Fabricated Wire Products, N.E.C.; and 3699, Electrical Products, N.E.C. A coverage ratio computed on the basis of including the industries to which these products are primary in 1967 would total 94 percent; 89 percent by industry 3357, and 5 percent by industries 3352, 3356, 3481, and 3699. The remaining 6 percent was shipped by establishments in other industries. For 1963 the comparable percentages were: 94 percent; 86 percent by industry 3357, and 8 percent by industries 3352, 3356, 3481, and 3699. The remaining 6 percent was shipped by establishments in other industries.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: Data shown parenthetically above are expressed in millions of dollars.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

[1]These figures exclude the values for aluminum ingot and aluminum extrusion billet produced by industries other than 3352, Aluminum Rolling and Drawing. (See industries 3334, Primary Aluminum, and 3341, Secondary Nonferrous Metals, in final industry report MC-67(2)-33C, Smelting and Refining of Nonferrous Metals and Alloys.)

[2]Includes total for product class 34815, Nonferrous wire cloth and other woven nonferrous wire products, which is primary to industry 3357.

[3]Includes total for product class 36996, Appliance wire and cord, and flexible cord sets, which is primary to industry 3357.

[4]These figures include the value for more products which are not shown as well as the value of the figures for which a range is shown above.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. eFrom 10 to 30 percent of this figure was estimated.

[1]Includes shipments of these products produced on a toll basis by others.

[2]Data are also shown in Current Industrial Report Series BDSAF-84, Shipments of Copper-Base Mill and Foundry Products. See table 6A-2.

[3]Data are also published in Current Industrial Reports Series M33-2, Aluminum Ingot and Mill Products. See table 6A-2.

[4]Data for ACSR and aluminum cable, bare, are also published monthly in Current Industrial Reports Series M33-2, Aluminum Ingot and Mill Products. Net quantity of shipments as reported in this series for the year 1967 and 1963 totaled 253.1 and 136.2 thousand short tons, respectively.

[5]Includes only permanent finishes such as enameling and vinyl coating. Excludes those coatings which are applied only for temporary protection.

[6]Differs from quantity data published in Current Industrial Reports Series M33-2, Aluminum Ingot and Mill Products, in that no data are included in the plain aluminum foil figures for that quantity of plain foil which is produced and converted in the establishment. As shown in the Current Industrial Reports, net shipments of aluminum foil totaled 224.7 thousand short tons in 1967 and 161.2 thousand short tons in 1963.

FOOTNOTES FOR TABLE 6A-2 INDUSTRY--3351

[7]Represents aluminum ingot and extursion billet made only by establisnments classified in industry 3352, Aluminum Rolling and Drawing. Comparable shipments for plants classified in industries 3334 Primary Aluminum and 3341, Secondary Nonferrous Metals, and other industries are as follows:

Item	Total shipments		Other companies		Interplant transfers	
	Quantity (1,000 short tons)	Value (million dollars)	Quantity (1,000 short tons)	Value (million dollars)	Quantity (1,000 short tons)	Value (million dollars)

Industry 3341	33.0	13.9	33.0	13.9	-	-
All other industries						

[8]Most of the aluminum ingot and billet (alloys) produced by aluminum rolling mills represent duplication of tonnages reported by the primary aluminum industry in that metal produced by the rolling mills is made from ingot produced in primary aluminum plants.

[9]Data are also published in Current Industrial Reports Series M33G "Magnesium Mill Products". See table 6A-2.

[10]Data are also published in Current Industrial Reports Series BDSAF-263 "Titanium Ingot and Mill Products." See table 6A-2.

[11]Includes $32.1 million produced in Industry 3357 "Nonferrous Wire Drawing, etc."

[12]Includes $25.8 million produced in Industry 3357 "Nonferrous Wire Drawing, etc."

[13]These data differ from the quantities shown in Current Industrial Report series M33E, "Nonferrous castings," in that no data are included for castings produced by captive foundry departments of plants classified in other industries. In addition, certain products are reported as castings in the monthly survey which in the census of manufactures, are classified as finished products in other industries.

[14]These data are included with product code 33699 41, "Other, including permanent and semipermanent magnesium and magnesium-base alloy castings."

Note: Net shipments are derived by subtracting receipts of mill shapes at producing mills from shipments (including quantities used at producing mills in the production of fabricated products) by such mills.

[1]Source: These data are derived from the following Current Industrial Reports Series:

Metal	Series	Title
Copper	BDSAF-84	Copper-Base Mill and Foundry Products
Aluminum	M33-2	Aluminum Ingot and Mill Products
Magnesium	MA-33G	Magnesium Mill Products
Titanium	BDSAF-263	Titanium Ingot and Mill Products

[2]Data represent metal weight, except for wire products, which are reported in copper content.
[3]Military ammunition cups and discs are included on a net weight basis, i.e., excluding the weight of the webbing scrap generated in the cupping and discing operation.
[4]Excludes electrical wire.
[5]Represents uninsulated, bare wire, tinned and/or alloy coated.
[6]Data represents aluminum and aluminum alloy content.
[7]Includes a small amount of rolled structural shapes.
[8]Includes a small amount of heat-treatable welded tube.

[1]The aluminum content of insulated wire and cable for 1967 was as follows:

Product class code	Item	Aluminum content (1,000 lbs.)
33574	Communication wire and cable	5,104
33577	Magnet wire	8,943
33578	Power wire and cable	47,857
33579	Other insulated or covered wire and cable	110,337
33576 36996	Appliance wire and cord and flexible cord sets	(D)

[2]Include estimates for quantities not reported and for some products for which quantity figures are suppressed.

[3]Electronic, lead-in and hook-up wire are included with paper and pulp, polyethylene insulated, switchboard, and other communication wire and cable to avoid disclosing operations of individual companies.

[4]Data are limited to shipments by all shown establishments which insulate wire or cable and establishments operated by the 50 largest producers of appliance wire and cord and flexible cord sets from purchased insulated wire (as measured by dollar value of shipments in 1963). However, the undercoverage of such wire and cord sets is probably less than 3 percent at the product class level.

[5]Cotton braided flexible cord sets, including heater cord sets are included with "other appliance wire and cord" to avoid disclosing operations of individual companies.

[1]Of these totals, the following represents the value of shipments of insulated wire and cable transferred from one plant of a company to another plant of the same company.

Product class code	Thousand dollars
33574	17,831
33577	67,146
33578	5,458
33579	12,185

[2]Based on a comparison with related data published in Current Industrial Reports Series BDSAF-84, Copper-Base Mill and Foundry Products, and M33-2, Aluminum Ingot and Mill Products, and a careful review of 1965 data reported on Survey Form MA33L, Insulated Wire and Cable, it appears likely that the metal content data for 1963 is understated by approximately 10 percent for copper and 15 to 20 percent for aluminum.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[2]Includes shipments of laminated foil produced in foil mills. In 1958, these shipments were valued at $36,787 thousand. In 1963 and later years, this product is included in product class 34970.

[3]Product class code 33573 includes value for product class code 33575.

Note: For 1963, materials consumed data for industries 3351, Copper rolling and drawing, and 3357, Nonferrous wiredrawing, etc., were published separately by subindustry. For 1967, such data were not separately tabulated. Subindustry data for 1963 appear in Volume II, 1963 Census of Manufactures, in Table 7A.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Data exclude tonnages of copper materials processed on a toll basis. Most of the material involved in toll processing is owned by establishments classified in other industries, principally industry 3357, Nonferrous Wiredrawing, etc. As table 6A shows unalloyed copper rod, bar, and shapes (product code 3351211) is, by far, the most important mill product produced on a toll basis.

[2]Included with material code 970099, "all other materials and components, parts, containers, and supplies, consumed." To avoid disclosing operations of individual companies.

[3]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[4]Data exclude tonnages of nonferrous materials processed on a toll basis.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9B. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

FORGINGS AND MISCELLANEOUS PRIMARY METAL PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3391--Iron and Steel Forgings
3392--Nonferrous Forgings
3399--Primary Metal Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3391--IRON AND STEEL FORGINGS

This industry comprises establishments primarily engaged in manufacturing iron and steel forgings, with or without the use of dies. These establishments generally operate on a job or order basis, manufacturing forgings for sale to others or for interplant transfer. Establishments which produce iron and steel forgings and which are also engaged in fabricating operations, such as machining, assembling, etc., in manufacturing a specified product are classified in the industry of the specified product. Iron and steel forgings are made to a considerable extent by establishments classified in other industries that produce forgings for incorporation, in the same establishment, into such products as machinery, motor vehicles, etc. For a detailed list of products of industry 3391, refer to table 6A, product codes 3391111 to 3391942.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Iron and Steel Forgings Industry in 1967 totaled $1,262 million. This included shipments of iron and steel forgings (primary products), valued at $1,110 million, shipments of other products (secondary products) valued at $125 million, and miscellaneous receipts of $27 million.

This industry's shipments of iron and steel forgings (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 included nonferrous forgings (3392).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 74 percent of the total industry shipments are represented by plants specializing in product class 33911, drop, upset,and press steel forgings.

Industry 3391 shipments of iron and steel forgings (primary products) in 1967 represented 72 percent (coverage ratio) of these products valued at $1,551 million shipped by all industries. In 1963, the coverage ratio was 69 percent. Other industries shipping iron and steel forgings (primary products) consisted mainly of industry 3714, Motor Vehicle Parts and Accessories, $83 million; and industry 3392, Nonferrous Forgings, $41 million.

Industry 3391 includes establishments in two main categories: those producing iron and steel forgings for sale to the trade (commercial forge shops), and those producing forgings for use by other plants of the same company (captive forge shops). A few plants in this industry produce forgings both for sale and for interplant transfer. In addition, forgings are also produced in forgings departments of establishments classified (on the basis of their final product) in other industries. In the 1967 Census of Manufactures, establishments in the fabricated metal product and machinery industries (Major Groups 34 to 37) having such "captive" forging departments (either ferrous or nonferrous) reported data on the approximate number of employees engaged in this activity as well as similar data for 13 other metal fabricating operations such as foundry, stamping, etc. These data will be summarized in Volume I, General Summary. Also, for those industries where the "captive" production of iron and steel forgings is of particular importance, the quantity of iron and steel forgings produced and consumed within such industries is shown in the materials consumed table in the reports covering these industries.

Materials consumed data, shown in table 7A of this report represent only those tonnages consumed by establishments classified in industry 3391, including consumption for secondary products. For this reason they cannot be related directly to the tonnages of forgings shown in table 6A which represent the total shipments of steel forgings, including those shipped by establishments classified in other industries.

Detailed figures on shipments of commercial steel forgings are collected on an annual basis by the Bureau of the Census and published in Current Industrial Reports Series MA-33C, Commercial Steel Forgings. Footnote 2, table 6A, shows totals for the data collected in the annual survey for 1967 and 1963.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3391, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3392--NONFERROUS FORGINGS

This industry comprises establishments primarily engaged in manufacturing nonferrous forgings, with or without the use of dies. These establishments generally operate on a job or order basis, manufacturing forgings for sale to others or for interplant transfer. Establishments which produce nonferrous forgings and which are also engaged in fabricating operations, such as machining, assembling, etc., in manufacturing a specified product are classified in the industry of the specified product. Nonferrous forgings are made to a considerable extent by establishments classified in other industries that produce forgings for incorporation, in the same establishment, into such products as machinery, motor vehicles, etc. For a detailed list of products of industry 3392, refer to table 6A, product codes 3392011 to 3392098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Nonferrous Forgings Industry in 1967 totaled $333 million. This included shipments of nonferrous forgings (primary products), valued at $187 million, shipments of other products (secondary products) valued at $130 million, and miscellaneous receipts of $16 million.

This industry's shipments of nonferrous forgings (primary products) in 1967 represented 67 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 69 percent. Secondary products shipped by this industry in 1967 consisted mainly of iron and steel forgings (SIC 3391) ($41 million), and special dies, tools, jigs, and fixtures (SIC 3544) ($36 million).

Industry 3392 shipments of nonferrous forgings (primary products) in 1967 represented 54 percent (coverage ratio) of these products valued at $348 million shipped by all industries. In 1963, the coverage ratio was 55 percent. Other industries shipping nonferrous forgings (primary products) consisted mainly of industry 3391, Iron and steel Forgings, $53 million; and industry 3352, Aluminum Rolling and Drawing, $38 million

Industry 3392 includes establishments in two main categories: those producing nonferrous forgings for sale to the trade (commercial forge shops), and those producing forgings for use by other plants of the same company (captive forge shops). In addition, a few plants in this industry produce forgings both for sale and for interplant transfer.

No data are available on nonferrous forgings which are produced and consumed within the same establishment in the manufacture of further fabricated products. In some instances, the fabricated product may require relatively little fabrication or processing beyond the rough forging stage. Nevertheless, establishments primarily engaged in producing such items are classified as fabricated product plants in the appropriate industry in Major Groups 34 to 37, Fabricated Metal Products, Machinery, and Transportation Equipment.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3392, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3399--PRIMARY METAL PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing primary metal products, not elsewhere classified, such as nonferrous nails, brads, and spikes; metal powder, flakes, and paste; and establishments primarily engaged in heat treating of steel for the trade. For a detailed list of products of industry 3399, refer to table 6A, product codes 3399111 to 3399611.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Primary Metal Products, N.E.C., Industry in 1967 totaled $578 million. This included shipments of primary metal products, n.e.c. (primary products), valued at $502 million, shipments of other products (secondary products) valued at $14 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $62 million.

This industry's shipments of primary metal products, n.e.c. (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent.

Industry 3399 shipments of primary metals products, n.e.c. (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $591 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping primary metal products (primary products) included Industry 3356, Nonferrous Rolling and Drawing, N.E.C., $16 million.

Industry 3399, by definition, includes establishments which fall into four significantly different categories: (1) those producing metal powders and paste; (2) those producing nonferrous nails, brads, and spikes; (3) those annealing and heat treating metal for the trade; and (4) those reclaiming metallics from slag. Accordingly, the manufacturing plants included in this industry involve different processes depending upon the type of product produced or operation performed. Of the 959 establishments classified in this industry 68 establishments with 3,574 employees were primarily engaged in producing metal powders, flake and paste; 462 establishments with 15,428 employees were primarily engaged in such services as heat treating, annealing, etc. The remaining 429 establishments with employment totaling 5,703 were engaged in producing nonferrous nails, brads, and spikes; reclaimed metallics from slag; or reported shipments of primary metal products, not specified by kind.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3399, these establishments accounted for 2 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3391 was 248, 248, and 287, respectively; in industry 3392: 37, 32, and 36; industry 3399: 868, 695, and 567. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors of the 1966/1965 relatives for employment and value added for industry 3391 were 1 and 1, industry 3392 were 3 and 3, and industry 3399 were 4 and 3, respectively.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The figures for 1963 are not strictly comparable with those for earlier years. Value added by manufacture for 1963 on a basis comparable with earlier years is $176.8 million.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Includes product class 33129, open die hammer and press forgings made in blast furnaces and steel mills.

[2]These figures are not strictly comparable with tonnage figures shown in Current Industrial Reports Series MA-33C, Commercial Steel Forgings, in that the latter include only forgings for sale, whereas the 1967 and 1963 Census of Manufactures also include interplant transfers of forgings. Accordingly, a direct comparison with the Current Industrial Reports Series is not possible. Forgings produced and consumed are not included in either the census or the Current Industrial Reports figures. The annual totals in the Current Industrial Reports survey for commercial steel forgings were as follows:

Item	1967 (1,000 short tons)	1963 (1,000 short tons)
Closed die (drop, upset, and press) forgings:		
Carbon	1,010.8	785.3
Alloy, including stainless	524.5	391.3
Open die hammer and press forgings:		
Carbon	187.9	156.1
Alloy, including stainless	211.9	219.9

[3]Monthly figures are also shown in Current Industrial Reports Series M33-2, Aluminum Ingot and Mill Products.

[4]Represents aluminum content.

[5]Quarterly figures are also shown in Current Industrial Reports Series BDSAF-84, Shipments of Copper-Base Mill and Foundry Products.

[6]Represents copper content.

[7]Represents iron content.

[8]Consists almost exclusively of receipts for work done on materials owned by others. Includes only work done by establishments classified in industry 3399.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Includes total for product class 33129, Press and hammer steel forgings (made in steel mills), which is primary to industry 3312.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in separate subject chapter titled "Selected Metalworking Operations.")

Appendix A

EXPLANATION OF TERMS

Employment and Payrolls.—The census of manufactures provides information on employment and payrolls at operating establishments and central administrative offices and auxiliaries. On the standard forms for manufacturing establishments, the number of production workers by quarter and all other employees during the pay period including March 12 was requested. Form NC-X6, "Central Administrative Offices and Auxiliaries" called for employment as of March 12 only. Both forms called for salaries and wages paid for the year.

All Employees.—This category comprises all full-time and part-time employees who worked or received pay for any part of the pay periods including the 12th of the months specified on the report forms. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Excluded are members of the Armed Forces and pensioners carried on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms, however, are excluded.

In special cases, respondents were instructed to exclude agricultural or fishery employment and related data from their reports. These were sugar mills operated as part of plantations, canning or freezing plants operated in conjunction with farms, and fish processing plants engaged in fishing.

Production and Related Workers.—This category comprises workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plant's own use (for example, power plant), recordkeeping, and other services closely associated with these production operations at the establishment covered by the report. Supervisory employees above the working foreman level were excluded from this category.

All Other Employees.—These are defined as nonproduction personnel, including employees engaged in the following activities: Factory supervision above the working foreman level, sales (including driver-salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, purchasing, financing, legal, personnel (including cafeteria, medical, etc.), professional, and technical. Also included are employees on the payroll engaged in the construction of major additions or alterations to the plant and utilized as a separate work force.

Average Employment.—The number of production workers as shown in the census tabulations is an average of the four quarterly figures reported by manufacturing plants. The "all employees" figure is the sum of this average and the reported number of other employees as of March 12.

Payrolls.—This category includes the gross annual earnings of employees on the payroll. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. This definition includes all forms of compensation such as salaries, wages, commissions, dismissal pay, bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and saving bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners, if an unincorporated concern. Also excluded are payments to members of Armed Forces and pensioners carried on the active payroll.

The 1967 census definition of payrolls is identical to that recommended to all Federal statistical agencies by the Bureau of the Budget. This definition does not include supplementary labor costs such as employer's Social Security contributions and other legally required expenditures, or payments for voluntary programs. Data on such supplementary labor costs were collected in the ASM and are scheduled for publication in the ASM reports, but are not included in the census volumes.

Man-Hours.—This total consists of all plant man-hours of production and related workers as defined above. It represents all man-hours at the plant including actual overtime hours, not straight-time equivalent hours. It excludes hours paid for vacations, holidays, or sick leave, when the employee was not actually at the plant. Where employees elected to work during the vacation period, the actual hours worked by such employees were reported.

Cost of Materials, etc., Consumed.—A summary inquiry on form MA-100 and the other manufacturing establishment report forms requested information on the cost of materials, supplies, semifinished goods, fuels, and electric energy actually consumed or put into production during the year and the cost of products purchased for resale, whether purchased, withdrawn from inventories, or received from other establishments of the company. Included also are the costs of materials supplied by the establishment which were processed elsewhere on contract for the establishment. "Cost" was defined as the direct charges actually paid or payable for items consumed or put into production during the year, after discounts, and including freight charges and other direct charges incurred by the establishment in acquiring the materials.

To arrive at the industry total "cost of materials, etc."[1] separate figures were obtained for (a) the total delivered cost of all raw materials, semifinished goods, parts, components, containers, scrap, and supplies consumed or put into production, (b) the amount paid for

[1] In some tables this category is designated simply as "cost of materials."

electric energy purchased; (c) the amount paid for all fuels consumed for heat, power, or the generation of electricity; (d) the cost of work done by others on materials or parts furnished by the reporting establishment (contract work); and (e) the cost of products bought and resold in the same condition.

It should be noted that the cost of fuel consumed under "(c)" above does not include fuel used as a material in the manufacturing process; for example, coal used in the production of coke. Such costs are included with other materials cost in category "(a)" above.

The total excludes the cost of services used, such as advertising, insurance, telephone, etc., and developmental, research, and consulting services of other establishments. It also excludes overhead costs, such as depreciation charges, rent, interest, royalties, etc., and materials, machinery, and equipment used in plant expansion or capitalized repairs which are chargeable to fixed assets accounts.

For materials received from other plants of the same company or from a central materials depot (whether at the same or different physical location), respondents were asked to value the items at their full economic value as produced, plus freight and other direct handling charges. The respondents were asked to check, where possible, that the cost equaled the value of shipments reported for the items by the company's plant which produced and transferred the goods, plus freight and other direct charges.

Value of Shipments.—Except in a few industries, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. For a few industries, specifically noted in the text of the industry chapters, Volume II, delivered prices were requested if delivery by employees of the establishment was a routine practice, as in the milk and bakery industries.

For most industries, value of shipments is readily available from accounting records and is closely related to the value of production. In a small group of industries, however, value of production or of work done was requested. This instruction was of particular importance in the aircraft and shipbuilding industries, where the shipments or deliveries of complete units may be a poor approximation of the work actually done during a given year.

Manufacturers were asked to include as products shipped, not only the products made in the establishment but also those made elsewhere under contract from the materials owned by the establishment. Included were all products sold, transferred to other parts of the same company, or shipped on consignment. The duplication in value of shipments and cost of materials arising because of the shipment of semifinished products among manufacturing plants is discussed in Part III of the Introduction, which also includes comments on the valuation of intracompany shipments by multiunit firms.

Miscellaneous Receipts.—In addition, manufacturers reported receipts for contract work performed for others, resales (that is, the value of all products resold without further processing), receipts for miscellaneous activities such as sale of scrap and refuse, and the value of installation and repair work performed by the plant employees. Although the value of products bought and resold without further processing is included in the value of shipments totals for each industry, it is excluded from the figures for individual products or classes of products.

Value Added by Manufacture.—This figure is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales and contract work done by others) from the value of shipments including resales, and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.[2]

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It is considered to be the best value measure available for comparing the relative economic importance of manufacturing among industries and geographic areas.

Inventories.—The value of beginning-of-year and end-of-year inventories held by each manufacturing establishment was obtained in the 1967 census. Separate inventory figures were requested for (1) finished products; (2) work in process; and (3) materials, supplies, fuel, and other inventories.

Respondents were asked to report their inventories at approximate current costs if feasible; otherwise, at book value. Since different methods of inventory valuation are used (LIFO, FIFO, etc.), the value of inventories aggregated for all establishments in an industry is not precisely defined. The importance of reporting inventories on a comparable basis was emphasized in the instructions; thus the year-to-year change in inventories indicated by the census figures is of more significance than their level.

In using inventory data by stage of fabrication for all industries and at the 2-digit industry level, it should be noted that an item treated as a finished product by one establishment may be reported as a material by another establishment. For example, the finished product inventories of a steel mill would be reported as materials by a stamping plant. Such differences are present in the inventroy figures by stage of fabrication for individual industries, industry groups, and all manufacturing, since these figures are merely aggregates of the figures reported by establishments.

Multiunit companies were instructed to include the inventories held by each establishment in that establishment's report. The inventory data tabulated on a geographic basis are believed, therefore, to reflect the actual physical holdings in each area, to the extent that the inventories were owned by the reporting companies. It is

[2] For a few industries (for example, aircraft, shipbuilding) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

not clear where goods owned by one company and stored by another were reported.

Special instructions on inventories were issued for two industries in the food group. Meatpacking establishments were told to report work in process separately only if separate records were maintained, otherwise to combine work in process with finished products. Distillers were instructed to include stocks of liquors held for aging as finished products, not as work in process.

Capital Expenditures.—Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year. It was suggested to the respondents that capital expenditures, as thus defined, could be computed by the following formula: The cost of additions completed during the year, plus construction in progress at the end of the year, less construction in progress at the beginning of the year. It was specified that the census definition of capital expenditures was to be used in computing the gross value of fixed assets discussed below.

Capital expenditures include the cost of plant and equipment for replacement purposes, as well as for additions to productive capacity. Costs associated with plants under construction but not in operation during the year are also included. The method of collecting data for plants under construction is described in the Introduction, Section 7, "Reporting Forms." Capital expenditures do not include plant and equipment furnished to the manufacturer without charge by governmental or private organizations. The value of rented facilities is also excluded.

New Structures and Additions to Plant.—This category includes all construction and other land improvements, whether built on contract or by the manufacturer's own labor force. Included are major alterations; capitalized repairs; new elevators, cranes, heating and air-conditioning equipment essentially a part of buildings; fixed structures such as blast furnaces, brick kilns, fractionating towers, and shipways; and land improvements such as roads, fences, parking lots, and railroad spurs.

New Machinery and New Equipment.—This category includes production and all other machinery and equipment. Included are motors, lathes, presses, looms, and other production machinery; office machines and fixtures; furniture; automobiles, trucks, and handling equipment. Major repairs or improvement to existing equipment are included if the cost is capitalized, as well as equipment manufactured by the plant for use in its own production.

Used Plant and Equipment.—This category represents expenditures for old or existing plants and for secondhand equipment acquired from others. Transfers of used equipment between plants of multiunit companies are included. The companies were instructed to report such transfers at their current value rather than original cost. The Census Bureau estimates of capital expenditures as compared to those published in the joint Office of Business Economics-Securities and Exchange Commission survey are discussed in the Introduction.

Fuels and Electric Energy.—Separate data were collected in the census for coal, coke, fuel oil, gas, and other fuels used for heat and power; purchased electric energy, electric energy generated by manufacturing establishments; and energy generated less the amount sold. Fuels used as a raw material (as coal in the production of coke) are included in the cost of materials rather than in the fuel category.

Assets and Rents.—Data on the gross value of fixed assets owned and rental payments for leased fixed assets were collected in the ASM. These figures are scheduled for publication in the ASM series, but are not included in the census volumes.[3]

[3]Earlier reports on these topics include chapter 9 of Volume I, Summary Statistics, in the 1958 census, and chapter 7 of the ASM Volume for 1964-65.

Appendix B

INDUSTRY DESCRIPTIONS

This appendix is included in Volume I, Summary and Subject Statistics, and in Volume III, Area Statistics, but has been omitted from this volume. The appendix shows the industry descriptions for each industry. In this volume, these descriptions are shown in the text preceding the tables in each industry chapter.

Appendix C

COMPOSITION OF INDUSTRIES IN THE 1967 STANDARD INDUSTRIAL CLASSIFICATION

The censuses of manufactures for 1967 and 1963 covered all establishments engaged in manufacture as defined, respectively, in the **Standard Industrial Classification Manual (SIC)**, 1967 edition, and 1957 edition, as amended, issued by the Bureau of the Budget. The 1967 edition contained minor revisions in the SIC Manual for the manufacturing industries additional to those issued between 1957 and 1963.

Most of the manufacturing industries as defined in 1963 remained, without change, for 1967. In view of the minor nature of the revision, this appendix cites only those industries affected by a revision between 1963 and 1967. Presented in two parts, this appendix lists, in part 1, the industries as defined for 1967 in terms of their 1963 equivalents and, in part 2, the industries of 1963 in terms of their 1967 equivalents. No data for either year are presented. Comparability between the two census years is such that data from one year may be readily compared to data in the other year by making the industry combinations shown below. Titles of industries for either year are as published in the respective Census volumes for 1967 and 1963.

Item 1 – Name and address *(Please correct any errors)*

Item 2A – COMPANY OWNERSHIP AND CONTROL

Is the firm named in Item 1 owned or controlled by another domestic company?

☐ YES ☐ NO

If "YES," give name and address of owning or controlling company:

Item 2B – Does the firm named in Item 1 own or control any subsidiaries?

☐ YES – If "YES," be sure to include the required information in this report for ALL subsidiaries.

☐ NO – If "NO," report only for firm named in Item 1.

Item 3A – COMPANY ORGANIZATION – Listed in column (a) are the Employer Identification Numbers assigned to the firm named in Item 1 and to the subsidiaries it owns or controls, based on our records. Please BRING THIS LIST UP TO DATE by additions, corrections, and deletions. In column (b), enter name and address of main office or principal place of business for each Employer Identification Number. Be sure to include ALL E.I. numbers assigned, both active and inactive. IF MORE SPACE IS NEEDED FOR ADDITIONAL E.I. NUMBERS, USE ITEM 3B ON REVERSE SIDE.

Employer Identification Number (a)	Name and address of main office or principal place of business *(For E.I. numbers you DELETE, please explain)* (b)

Item 4A – LISTING OF YOUR DOMESTIC ESTABLISHMENTS (based on our records) – Please bring this list up to date by **deleting** establishments not operated by this firm or its subsidiaries in 1967; **correcting** establishment names, addresses (should be PHYSICAL LOCATIONS), and E.I. numbers, as necessary; and **listing** in Item 4B on the REVERSE SIDE all **additional** establishments now in operation or expected to be in operation at any time during 1967.

INTRODUCTORY NOTE

The Bureau of the Census is now conducting a census of establishments primarily engaged in the types of activities described in item 9 (on the reverse side). However, our records do not contain sufficient information on the kind of business or activity carried on at your establishment. Please complete item 1, Parts A and B below, to provide this information. Then proceed according to the instructions given in Part C (i.e., if you are primarily engaged in one of the business activities described in Part B, boxes 1–29, you are required to complete only item 1, sign the certification in item 12, and return the form in the envelope provided; otherwise, you are required to complete the entire form).

GENERAL INSTRUCTIONS

If you operated more than one establishment (or location) under the same Employer Identification Number shown in the address box, this report should include consolidated figures for all locations; in item 11, however, please provide information separately for each location. If your Employer Identification Number was changed from that appearing in the address label, enter the currently assigned Employer Identification Number for this establishment in item 3.

Information provided by you on this report should account for your business activities for the entire year 1967. If book figures are not available, enter your best estimates.

Include the cost of all improvements and new construction at this establishment which were in progress but had not been completed at the end of 1967.

Include expenditures made by your company (or any of its subsidiaries) for structures which, upon completion, were or are to be sold and leased back to this establishment.

Exclude the cost of land and mineral rights.

Exclude the cost of maintenance and repairs charged as current operating expense.

Exclude capital expenditures made by outside owners of property rented or leased to this establishment. **Exclude** capital expenditures made by this establishment for other locations of your company.

Type of capital expenditures:		
a. New structures and additions to plant	$	2-5
b. New machinery and new equipment	$	2-6
c. Used plant and used equipment acquired from others	$	2-7
d. **TOTAL CAPITAL EXPENDITURES DURING 1967** (Sum of lines a, b, and c) →	$	2-8*

ITEM 12. CHANGES IN GROSS (BOOK) VALUE OF FIXED ASSETS OF THIS ESTABLISHMENT DURING 1967

Report the changes in gross (book) value of fixed assets **of this establishment** for which depreciation and amortization accounts are ordinarily maintained. "Gross (book) value" represents the acquisition cost (original cost or other basis) to your company of such fixed assets.

Include all depreciable fixed assets (buildings, structures, machinery, equipment, etc.), and all amortizable fixed assets.

Include all improvements and new construction "in progress" during 1967 but not yet completed at the end of 1967. Also **include** the value of fixed assets owned by this establishment but leased or rented to other companies.

Include the value of fixed assets owned by your company or any of its subsidiaries but "leased" to this establishment.

Exclude the value or fixed assets of other locations of your company (or any of its subsidiaries) for which this establishment maintains records.

a. Gross (book) value of fixed assets at BEGINNING of 1967	$	3-1
b. Total capital expenditures during 1967 (Copy figure from item 11d)	$	3-2
c. Gross (book) value of fixed assets sold, retired, scrapped, or destroyed during 1967	$	3-3
d. Gross (book) value of fixed assets, at END of 1967. (**Should equal lines a + b − c.** If not, please comment in "Remarks.") →	$	3-4

ITEM 13. RENTAL PAYMENTS MADE FOR THIS ESTABLISHMENT DURING 1967 (EXCLUDE LAND)

Report all rental payments made or accrued during 1967 to OUTSIDE firms which own the plant and equipment rented or leased by **this** establishment. **Exclude** rental payments made by this establishment to your parent company or any of its subsidiaries. (The value of such company-owned assets should be reported in item 12, however, as if actually owned by this establishment.) **Exclude** rental payments made by this establishment for plant and equipment located at other establishments of your company.

In reporting rents paid (or equivalent charges) for use of "Buildings and structures," **exclude** separately identified fees for leasing of land (such as ground rents).

Under "Machinery and equipment," be sure to **include** rental payments, (or equivalent charges), for use of transportation equipment, office equipment, computer systems, passenger cars, and all other types of machinery or equipment.

Rental payments made for this establishment:		
a. For use of BUILDINGS AND STRUCTURES (excluding land)	$	3-5
b. For use of MACHINERY AND EQUIPMENT	$	3-6
c. **TOTAL RENTAL PAYMENTS** (Sum of lines a and b) →	$	3-7

ITEM 14. COST OF RESEARCH AND DEVELOPMENT PERFORMED AT THIS ESTABLISHMENT DURING 1967

"Cost" should **include** all costs incurred at this establishment during 1967 to support research and development activities (i.e. wages and salaries; direct materials costs; services and supporting costs; and an appropriate share of depreciation and overhead). If this establishment performed research and development for other companies on contract during 1967, **include** the total amount charged for such work performed. (Also, report such receipts in item 8 above.)

Type of research and development performed:		
a. Federal contracts and subcontracts	$	3-8
b. Other research and development initiated with funds of your company or other (non-Federal) sources	$	3-9
c. **TOTAL COST OF RESEARCH AND DEVELOPMENT DURING 1967** (Sum of lines a and b) →	$	3-10*

ITEM 15. WAREHOUSE STORAGE SPACE, AS OF DECEMBER 31, 1967

If you reported any employees in item 7, line c, "Warehousing," complete this item.

Line a. Exclude floor space occupied by interior walls, permanent aisles, elevator shafts, stairways, offices, receiving and shipping platforms, etc.

Line b. Net piling space is space for storing commodities – inside space measured from wall to wall and from floor to ceiling, less space for ventilation (outside of the pilings), coils, aisles, posts, sprinklers, etc.

a. Occupiable floor space (under roof) – occupied and unoccupied – of this establishment	Square feet	4-1
b. Refrigerated (net piling) space, 50 degrees Fahrenheit or below, in this establishment	Cubic feet	4-2*

INSTRUCTIONS

This form will provide you and the Bureau of the Census with a systematic means for assuring that ALL DOMESTIC ACTIVITIES of your company and its subsidiaries have been accounted for in the 1967 Censuses of Business, Manufactures, and Mineral Industries. For the purposes of this report, "domestic" activities should include all 50 States and the District of Columbia. It should **not** include activities of your firm in foreign countries. (Note – Your Puerto Rico activities, if any, will be covered separately in the 1967 Census of Puerto Rico conducted jointly by the Commonwealth government and the U.S. Bureau of the Census.)

Please complete Form NC-K1, "Company Summary Report," **after** you have prepared all required 1967 Census establishment reports for your company and its subsidiaries, but **before** you return these completed reports to the Bureau of the Census. Preparing this Company Summary Report **prior** to returning the completed establishment reports may help you to discover more readily and to correct promptly any **omission** or **duplication** of reports for those establishments which should be covered in the 1967 Censuses of Business, Manufactures and Mineral Industries. In turn, this will speed up the Census Bureau's processing of your company report forms and will minimize any correspondence regarding coverage.

d. Capitalized development and exploration of mineral properties	$	3-8
e. TOTAL CAPITAL EXPENDITURES DURING 1967 (Sum of Lines a, b, c, and d) →	$	3-9*

ITEM 7. CHANGES IN FIXED ASSETS DURING 1967

Report the value of fixed assets of your company and its subsidiaries for which depreciation and amortization accounts are ordinarily maintained. "Gross (book) value" represents the acquisition cost (original cost or other basis) to your company of such fixed assets. "Net value" represents the gross value of such fixed assets, **less** their accumulated depreciation and amortization.

Include fixed assets for **all** domestic establishments and facilities.

Exclude fixed assets of your company and its subsidiaries in foreign countries. These assets should be reported in Item 10c below.

Include all depreciable assets (buildings, structures, equipment, etc.) and amortizable fixed assets.

Exclude depletable assets (land, timber, and mineral rights) and non-fixed assets (inventories, cash, accounts receivable, etc.). These assets should be reported in Item 10b below.

Include in the value of assets all improvements and new construction that were "in-progress" but not yet completed at the end of 1967. Also **include** the value of fixed assets (machinery, equipment, buildings, structures, etc.) owned by your company and its subsidiaries but leased or rented to other companies.

		Key
a. Gross (book) value of fixed assets owned by your company, as of BEGINNING of 1967	$	4-1

GENERAL INSTRUCTIONS

(See also specific instructions with Product Group Reference List)

As part of the 1967 Census of Manufactures, the Census Bureau is conducting this survey of the Distribution of Manufacturers' Sales by Class of Customer. The last such survey was conducted as part of the 1958 Census of Manufactures. This survey will provide a current analysis of the marketing channels through which the goods move from the manufacturer to the user or consumer. The results are needed for the improvement of the national income and product statistics.

Estimates are acceptable – We appreciate that there is no uniform system of sales analysis and that completeness of records varies considerably among companies. Therefore, some companies will have to use estimates to a far greater extent than they do on other Census surveys. If actual records are not available except at considerable expense, or if your class of customer or product groupings differ significantly from those requested, approximations will be acceptable.

What to report – You are requested to provide a summary company level report on the shipments of groups of products from your company's manufacturing plants and sales branches and offices. This report should include data for all domestic subsidiaries, divisions, and establishments as reported on Form NC-K1, "Company Summary Form." You are requested in section 1 to allocate the shipments from your manufacturing plants, including movements within the company, according to type of customer; and in section 2 to further trace the shipments which move from or on order from company operated sales branches, sales offices, and administrative offices.

Product groups – (See accompanying Reference Manual PGL-(NC-K4M).) Report groups of the products for which you report shipments from manufacturing establishments in item 9, Form MA-100. However, the products have been grouped into a smaller number of categories for this report. The Reference Manual lists the product categories for which class of customer information is to be reported and describes the products, as reported on Form MA-100, which are to be summarized into the groups.

At the head of each column, enter the product code and description from the manual. In distributing your sales by class of customer, include products bought and resold in the same condition (resales) in their appropriate product group. Exclude, however, miscellaneous receipts and receipts for contract and commission work. In both sections 1 and 2, please estimate the percent of each product group which is resales, lines 15 and 28.

Allocation of sales and shipments – Special instructions on reporting sales for a few particular products are included in the instructions. Unless there are such special instructions, use the following standards in completing this report.

Section 1 – Allocate the shipments from your manufacturing plants to the classes of customers described. In section 1A, list those customers which represent within company shipments, i.e., to other plants of the company for further processing or to the company's own wholesale or retail outlets. For purposes of section 1A, your sales branches and sales offices, if any, are considered as customers. If you report sales on line 1 (shipments to or on order from sales branches, sales offices or administrative offices), you must also report in section 2. **Products should be valued f.o.b. plant as reported on Form MA-100.**

Section 2 – Products sold from sales branches, sales offices, and administrative offices should be valued at sales price to the customer.

DESCRIPTION OF CLASS OF CUSTOMER

(Corresponds to report form line number)

Section 1A – SHIPMENTS, SALES OR TRANSFERS TO OTHER ESTABLISHMENTS OF THIS COMPANY

1. Sales branches, sales offices, administrative offices – Include shipments to or on orders received through those establishments of your company which report on Form CB-51A–51L, Census of Business, "Manufacturers' Sales Branches and Offices." These are establishments operated by the company primarily to sell the products manufactured by the company, although they may also sell products made by other companies. (These are distinguished from merchant wholesale establishments of the company, SEE line 2.) Also, for purposes of this inquiry consider as a sales office any administrative office which handles sales of the company. These establishments report on Form NC-X6, "Central Administrative Offices and Auxiliaries."

Include as shipments to sales branches, sales offices and administrative offices not only the value of products actually shipped from the plant to these establishments, but also products shipped from the plant to customers on order from the sales branch or office. If any sales are reported on line 1, section 1, sales from sales branches and sales offices, you must also complete section 2.

2. Merchant wholesale establishments – Report shipments to or orders from any establishment operated by this company for which you report in the 1967 Census of Business on Form CB-50A–50R.

3. Retail stores or outlets – Report sales through separately operated retail stores for which a report is also required in the Census of Business.

4. Other manufacturing plants – Report all transfers or shipments from one manufacturing plant of this company to another whether for further processing, for use as a material or supply, or for resales by the other plants.

5. Other establishments – Report all transfers or shipments to other plants of this company, such as mining, transportation, service, etc.

Section 1B – SHIPMENTS TO OTHER COMPANIES, INDIVIDUALS, GOVERNMENTS, AND EXPORT

6. Wholesalers – Include all wholesale companies purchasing primarily for resale to other businesses or to institutions and not directly to household consumers or farmers.

7. Retailers – (Do not include shipments to your company's own retail outlets.) Include sales to businesses which sell merchandise for personal, household, or farm consumption. Include all chain stores, mail order houses, department stores, independent retailers, including independent route salesmen such as bakery or dairy truck distributors who sell directly to households.

8. Manufacturers – Report sales to companies known to be engaged in manufacturing. Include as manufacturers food processors such as meat packers, bakeries, and bottling plants; sheet metal operations; feed mixers; logging camps; sawmills; printing; publishing; apparel jobbers; machine shops.

9. Commercial and industrial users, construction, State and local governments, private and public institutions – Include all private firms and businesses not considered manufacturers, retailers, or wholesalers. Thus, include companies engaged in construction, mining, transportation; as well as utilities, restaurants, hotels, and other businesses providing services; include hospitals and schools, as well as State and local governments. (Report sales to the Federal Government separately.) **Lines 9b (and 22b) are used only for product groups for which special instructions appear in the Product Group Reference List.**

10. Individuals, household users, and farmers – Include all direct sales from the manufacturing plants to households, farmers, and individual users (including sales to your company's own employees at retail, even if at a discount). Companies which deliver products to customers should include route sales to households in this item (sales to stores, institutions, and restaurants). State and local governments should be reported in the appropriate category.

11. Federal Government – Include all sales to branches of the Federal government and to corporations owned by the Federal Government; include sales to military post exchanges, ship's stores and similar units.

If you operate manufacturing plants reporting on Census Form MA-175, "Report on Shipments to or Receipts for Work Done for Federal Government Agencies and Their Contractors and Suppliers," report as sales to government only those shipments made directly to the government. Indirect sales under subcontractor should be reported as shipments in the class of customer to which the prime contractor is classified, usually **other manufacturing companies.**

12. Export – Report sales for direct export, including shipments to your company's foreign subsidiaries and affiliates. Do NOT include shipments to domestic exporters which should be reported as sales to wholesalers.

13. Other – Report sales for all customers not listed in lines 6–12 (and 19-25).

14. Total shipments from manufacturing establishments – The sum of lines 1-13 should approximate the sum of product class shipments comprising the group reported in item 9, Form MA-100, of establishment reports with allowance for resales.

16. Total for product group reported in item 9 of Form MA-100 should equal the sum of product class shipments comprising the product group reported in item 9, Form MA-100.

Section 2 – SALES BY SALES BRANCHES, SALES OFFICES, AND ADMINISTRATIVE OFFICES – Lines 17-26 – Class of customer definitions are the same as for section 1B.

GENERAL INSTRUCTIONS

As part of the 1967 Census of Manufactures, the Bureau of the Census is conducting this survey of the Distribution of Manufacturers' Sales by Class of Customer. This survey will provide a current analysis of the institutions through which the Nation's goods move from the manufacturer to the customer. The results are needed for the improvement of the national income and product statistics. The latest broad-scale survey of the distribution of sales covered 1958.

One Form (NC-K4S) should be completed by each company operating only one place of business during 1967. If you operate more than one separate place of business, please let us know and we will send you the correct form.

This report covering all of the domestic activities of the company will measure the flow of products from this company to its customers. Please report in column (B) the value of all of your products (whether made in your company or purchased and resold without further fabrication) shipped to each of the class of customer categories listed in column (A). Report shipments on consignment as though the merchandise had been sold at the time of the shipment. If such consignment shipments are to agents, consider the agent as a wholesaler.

Estimates are acceptable – We appreciate that there is no uniform system of sales analysis for all manufacturing companies and that reporting on this form will require some companies to resort to the use of estimates to a greater extent than is usually necessary for Census report forms. If you do not have records showing your sales by class of customer or if your sales analysis by customer class differs for some of the classes shown on this form, approximate figures will be acceptable. It is hoped that you can provide estimates that do not miss the actual figure by 2 or 3 percent of the total value of sales for the product group.

Form NC-K4S – should equal – **1967 Form MA-100**

Line 9 . . . . . Item 9a-9j and 9m (resales)
Line 10 . . . . . Item 9k
Line 11 . . . . . Item 9l
Line 12 . . . . . Item 9n

1. Wholesalers – Include all wholesale companies purchasing primarily for resale to other businesses or to institutions and not directly to household consumers or farmers. Include industrial distributors, drop shippers, desk jobbers, voluntary group wholesalers, retail cooperative warehouses and buying groups, as well as wholesale merchants, exporters and export intermediaries and similar types of operations.

2. Retailers – Include sales to businesses which sell merchandise for personal, household, or farm consumption. Include all chain stores, mail order houses, department stores, independent retailers including those who operate their own home service delivery routes such as independent bakery or dairy truck distributors.

3. Manufacturers – Report sales to companies known to be engaged in manufacturing. Include as manufacturers food processors such as bakeries; bottling plants; sheet metal operations; feed mixers; logging camps; sawmills; printing; publishing; apparel jobbers; producers of ready-mixed concrete; machine shops.

4. Commercial and industrial users, construction, State and local governments, private and public institutions – Include all private firms and businesses not considered manufacturers, retailers, or wholesalers. Thus, include in this item companies engaged in construction, mining, transportation; as well as utilities, restaurants, hotels, and other businesses providing services; include hospitals and schools, as well as **State and local governments.** (Report sales to the Federal Government separately.)

5. Individuals, household users and farmers – Include all direct sales from the manufacturing plants to households, farmers, and individual users, including sales to your company's own employees at retail, even if at a discount. Operating plants of the company which deliver products to customers should include route sales to households in this item (sales to stores, institutions, restaurants, State and local governments should be reported in the appropriate category).

6. Federal Government – Include all sales to branches of the Federal Government and to corporations owned by the Federal Government; include sales to military post exchanges, ship's stores and similar units.

If you report on Census Form MA-175, "Report on Shipments to or Receipts for Work Done for Federal Government Agencies and Their Contractors and Suppliers," report as sales to government only those shipments made directly as prime contractor. Indirect sales under subcontractor should be reported as shipments in the class of customer to which the prime contractor is classified, usually other manufacturing companies.

7. Export – Report sales for direct export, including shipments to your company's foreign subsidiaries and affiliates. Do **not** include shipments to domestic exporters which should be reported as sales to wholesalers.

Checks to assure a complete and accurate report

The Census Bureau reviews your report for omissions, inconsistencies, and unusual ratios. To save you future correspondence about these problems, please make the following checks before returning your report: (1) Review the report carefully to see that no items are omitted for the year being covered; (2) Calculate and enter figures for the four "reasonableness" checks below, and review the results; (3) Correct your report for any errors you find; explain unusual figures in "Remarks."

"Reasonableness" checks	Calculation required for each check	Figures for 1967
a. Average hourly wages per production worker	Item 3Aa (Production workers' wages) ÷ item 4e (Total man-hours)	$
b. Hours worked per year per production worker	Item 4e (Total man-hours) × 1000 ÷ item 2f (Average number of production workers)	Hrs.
c. Salaries and wages per dollar of shipments	Item 3Ac (Total payroll) ÷ item 18 (Total value of shipments)	¢
d. Materials cost per dollar of shipments	Item 5f (Total materials cost) ÷ item 18 (Total value of shipments)	¢
e. Is the total for value of shipments (item 18) greater than the sum for payroll (item 3Ac) plus total cost of materials, etc. (item 5f) ☐ Yes ☐ No – Explain in "Remarks."		

GENERAL INSTRUCTIONS

A separate Census report is required for each manufacturing establishment; therefore, based on Census records, a report form is provided for each establishment which your company operated in 1967.

For purposes of the Census, a **manufacturing establishment** is defined as a single physical location where manufacturing operations are performed (e.g., a factory, mill, or plant). Thus a separate report is required for different physical locations even though the establishments may be engaged in the same line of manufacturing.

Please note that establishments engaged in the following activities are also considered to be manufacturing for the purposes of this Census: Poultry dressing; milk pasteurizing and bottling; seafood, fresh packaged or frozen; apparel jobbing and contracting; logging camps and logging; sawmills; printing; publishing—book, magazine, periodical, etc.; manufacturing and delivering ready-mixed concrete; machine shops, including those operating on a job order basis; job casting, stamping, machining; plating, galvanizing, polishing materials owned by others, etc.; ship and boat repairing.

In completing this report, a limited amount of prorating or estimating is acceptable if book records are not readily available. Include all the activities conducted **within** the establishment: e.g., manufacturing, fabricating, processing, and assembling; maintenance of plant and equipment; receiving, shipping, warehousing, storage; research; record keeping; health, safety, cafeteria, and other services.

Each report should cover the calendar year 1967. However, a report is required even if the establishment operated only part of the year. If your book records are not on a calendar year basis, carefully prepared estimates will be acceptable. If reporting on a calendar year basis will require considerable additional costs, and your fiscal year covers at least 10 months of the calendar year 1967 (i.e., ends between October 31, 1967 and February 29, 1968), you may report on a fiscal year basis. However, all employment, payroll, and man-hour figures should relate to the calendar year rather than the fiscal year. (Calendar year payroll records should be available from your tax records.)

In the certification, enter the exact dates of the period covered by the report. If the ownership changed during the year, complete the report only for that part of 1967 in which your company owned and operated the establishment. Report in item 13 the appropriate information on changes in ownership or operations.

If additional report forms are needed, write to the Jeffersonville Census Operations Office. Be sure to describe the type of activity of the establishments for which the additional report forms are requested.

CONTINUATION OF INSTRUCTIONS FOR ITEMS 2, 3, 4, 5, and 7

(Definitions of employees and payrolls used to calculate withholding taxes generally may be followed in completing items 2 and 3A, Employment and Payrolls.)

Item 2. Number of Employees—Be sure to include all persons on paid sick leave, paid holidays, and paid vacation during the pay periods, as well as those actually working. Exclude members of armed forces and pensioners carried on your active rolls. Include officers at this establishment if a corporation; if an unincorporated concern, exclude proprietors or partners.

Item 3A. Payrolls—Report the gross earnings paid in the calendar year 1967 to employees on the payroll at the establishment prior to such deductions as employee's Social Security contributions, withholding taxes, group insurance premiums, union dues, and savings bonds. Include in gross earnings, commissions, dismissal pay, paid bonuses, vacation and sick-leave pay, and the cash equivalent of compensation paid in kind. Include salaries of officers at this establishment if a corporation; if an unincorporated concern, exclude payments to proprietors or partners. Exclude payments to agricultural employees, fishermen, members of armed forces, and pensioners carried on your active payroll.

Item 4. Plant Man-hours of Production Workers—If an employee elects to work during vacation periods, report only actual hours worked.

Item 5. Cost of Materials, Fuels, Electricity, and Contract Work—If actual consumption records are not available, cost of purchases may be used if these do not differ significantly from the amounts actually used. The consumption of any major item which differs significantly from purchases should be estimated by adding beginning inventories to the amounts purchased and subtracting from this total the cost of goods on hand at the end of the year.

Item 5a. Cost of Materials, Parts, Components, Containers, Supplies, etc., Consumed—Report the delivered cost of all raw materials, containers, scrap, and supplies, etc., which were: (1) put into production; (2) used as operating supplies; (3) used in repair and maintenance. Include also cost of materials owned by this establishment but consumed by other companies to make products for this establishment under contract. (The value of these products should be reported in item 18.) Amounts paid to other companies for such contract work should be reported on line 5e and should include freight out and in. If semi-finished goods, parts, or components were produced and incorporated into finished products at this plant during 1967, include the cost of raw materials used rather than the value of the intermediate products.

Include **only** value of **physical goods used** or put into production. Exclude cost of such **services** as advertising, telephone, telegram and cable, insurance; developmental, research, or engineering; management, marketing, and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Exclude also such **overhead** items as depreciation charges against plant and equipment; rent and rental allowances, interest payments, royalties, and patent fees. Exclude materials, supplies, machinery, and equipment which were used in the construction of new structures or additions to your plant, or new machinery and equipment, and which were chargeable to fixed assets accounts. Exclude products purchased and resold without further manufacturing, processing or assembling; their costs should be included in item 5b.

Item 5b. Cost of Goods Sold Without Further Manufacturing, Processing, or Assembling in this Establishment—Include all products bought and resold in the same condition as when purchased and not made part of another product manufactured by this establishment. (Total sales value of all products resold is to be reported in item 18 on the line for "Resales.")

Item 5c. Fuels Consumed—Report cost of all fuels (including gasoline) consumed for heat, power, transportation, and the generation of electricity.

Item 5e. Cost of Contract Work Done for You by Others on Your Materials—Report the total payments made during 1967 for any work done by others on materials furnished by your establishment, including freight out and in on the materials furnished by you.

Item 7. Capital Expenditures for this Establishment (Exclude expenditures for land)—Capital expenditures during 1967 may be determined by the following computation: The cost of additions completed during the year, plus construction in progress at the end of the year, minus construction in progress at the beginning of the year.

Item 7a. New Structures and Additions to Plant—Report total expenditures during 1967 for new construction (whether constructed on contract or by your own forces), major alterations, capitalized repairs, and improvement of buildings, including all new elevators, cranes, heating and ventilating equipment, essentially a part of the buildings. Also, other fixed structures (such as brick kilns, shipways, and similar types of structures), and site improvements (such as roads, docks, tracks, parking lots, fences, utilities).

Item 7b. New Machinery and New Equipment—Report total expenditures at this establishment for new production machinery and equipment and other new machinery and equipment. Include replacements, as well as additions to capacity. Include the value of capitalized improvements and repairs to machinery and machinery produced and used at this establishment. Include all new motors, lathes, punch presses and similar machinery and equipment for use in production, as well as all new office machines and fixtures, furniture, cafeteria and dressing room furnishings, automobiles and trucks, and other similar equipment.

Item 7c. Used Plant and Used Equipment Acquired from Others—Report total expenditures at this establishment for old or existing plants and for second-hand equipment acquired from others, including the U.S. Government. Include at approximate market value machinery or equipment transferred from other plants of your company.

EXPENDITURES FOR PLANT AND EQUIPMENT DURING 1967 FOR MANUFACTURING ESTABLISHMENTS UNDER CONSTRUCTION

ANNUAL SURVEY OF MANUFACTURES (1967 CENSUS OF MANUFACTURES)

INSTRUCTIONS

The information reported on this form should be for manufacturing establishments under construction or renovation and **not in operation** during the calendar year 1967. Expenditures for any plant in operation (those which had employees, inventories, or made shipments) during the calendar year should be reported on the Annual Survey of Manufactures form(s) MA-100, and they should not be duplicated in this report. The sum of the figures shown in column (b) of item 2 of this report and in item 7 of form(s) MA-100 should account for all capital expenditures (exclusive of those for land) made by this company and its subsidiaries and affiliates during the calendar year 1967 for manufacturing facilities in the United States.

Report expenditures by this company, its subsidiaries, and affiliates during the year, for construction and equipping **new manufacturing establishments, or for renovating existing manufacturing establishments**, that were not actually in operation during the year.

Expenditures refer to all costs actually incurred **during the calendar year 1967**, which are chargeable to fixed assets accounts, and are of the type for which depreciation accounts are ordinarily maintained. These expenditures cover the acquisition, construction, and major alteration of buildings, and other fixed plants and structures (whether on contract or by your own forces) and the acquisition of machinery and equipment. **Expenditures are equal to construction and other additions to fixed assets completed during 1967, plus construction-in-progress at the end of 1967, minus construction-in-progress at the beginning of 1967.**

Do not include any expenditures on these projects actually made prior to or after the calendar year. For example, if construction of a new plant is begun before and is completed after 1967, only those costs chargeable to fixed assets accounts which were actually incurred during the calendar year should be reported. If your records do not show the exact information needed, please make careful estimates.

Column (a) – Principal products to be made or activities to be conducted at this establishment – Describe briefly the kind of business that will be conducted at the establishment. List the principal types of products that will be produced.

Column (b) – New plants and structures – Report total expenditures during the calendar year for new construction and major alterations of buildings, including all new elevators, cranes, heating and ventilation equipment, essentially a part of the buildings; other fixed structures (such as blast furnaces, brick kilns, fractionating towers, shipways, and similar types of structures); and site improvements (such as roads, docks, tracks, parking lots, fences, utilities, etc.). Exclude expenditures for land.

New machinery and equipment – Report total expenditures during the calendar year for machinery and equipment acquired in new condition for use in production, and other purposes in plants under construction or renovation. Examples are motors, lathes, punch presses, automobiles, trucks, office machinery and equipment, furniture, cafeteria facilities, etc.

Used plant and used equipment – Report total expenditures during the calendar year for acquisition of old or existing plant and second-hand equipment from others, including the U.S. Government, for use in establishments under construction.

If you have any questions regarding form MA-101, please communicate with the Jeffersonville Census Operations Office, Jeffersonville, Indiana 47130. Please complete this report and return by April 30, 1968, in the enclosed envelope, which requires no postage. Your cooperation will be greatly appreciated.

GENERAL INSTRUCTIONS

Please complete and return this form in the envelope provided.

A separate report is required on this form for each sales branch and sales office operated during 1967. Each sales office without stock should be reported separately as well as each sales branch carrying stocks of merchandise from which deliveries are made to customers. Sales branches and sales offices located at plants or administrative offices should be reported on this form where separate records are available, or if substantially accurate reports can be prepared. Employment, payroll, inventories, and operating expenses reported here should not be included in manufacturer's plant reports (MC series). Sales, however, will to some extent duplicate shipments on your plant reports.

This report should cover only the establishment identified in the address block.

This report should cover the calendar year 1967 or, if records are maintained on a fiscal year basis, the report should cover the fiscal year which includes at least 10 months of 1967.

If book figures are not available, enter your best estimates.

If unusual circumstances should cause an undue burden in filing by the due date, or if you have any questions, please write to the **Jeffersonville Census Operations Office, Jeffersonville, Indiana 47130.**

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses...in the year 1964, then in the year 1968, and every fifth year thereafter, and each such census shall relate the year immediately preceding the taking thereof.

Geographic scope of censuses (191a)

Each of the censuses authorized by this chapter (other than censuses of population) shall include each State, the District of Columbia, Alaska, Hawaii, the Virgin Islands, Guam, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States exercises jurisdiction, control, or sovereignty. Censuses of population shall include all geographic areas referred to in the preceding sentence. Inclusion of other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

Failure to answer questions affecting companies, businesses, religious bodies, and other organizations: False answers (224)

Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by certified mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than $500 or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such question, he shall be fined not more than $10,000 or imprisoned not more than one year, or both.

Appendix G

COMPARABILITY OF PRODUCT CLASSES BETWEEN THE 1967 AND 1963 CENSUSES OF MANUFACTURES

This appendix lists classes of products which underwent revision between the 1963 and 1967 censuses of manufactures. Revisions resulted from some amendment in the 4-digit industry composition of the Standard Industrial Classification (SIC) Manual between the two years and from changes in product classes in 1965, and again in 1967, within industries not otherwise affected by SIC 4-digit amendment. The 1967 revision of the 4-digit SIC level affected but a few industries, mainly a reordering, including deletion, of some 4-digit industries within several 3-digit SIC groups and, in the case of group 398, its deletion and merger with group 399. Most of the 1963-1967 changes in classes resulted from revision within industries not affected by 4-digit revision. These 5-digit changes were occasioned by the need to (1) accord recognition to products growing in importance and discontinue product groupings declining in importance; (2) reflect changing technologies or market orientations; and (3) correct errors in classification.

Product classes, coded to the 5-digit level, represent families (of substantial shipments size) of relatively homogeneous products, the latter coded to the 7-digit level. As such, the product class is an intermediate level of coding between the 7-digit product and the 4-digit SIC industry. Product classes are utilized by the Bureau of the Census for data collection in both the Census of Manufactures and Annual Survey of Manufactures and in more than 100 current commodity reports in the Current Industrial Reports series. While the Annual Survey of Manufactures is built around the product class, in the Census of Manufactures (Volume II, Industry Statistics) product class data will be found in a number of tables, important among these is table 5B which shows the shipments of product classes by industries and secondary industry contributors to the shipments of those product classes; tables 6A, B, and C give production and/or shipments data for such classes; and table 8, where general statistics (number of establishments, employment, payrolls, value added, and value of shipments, among other items) are shown for establishments specializing in a product class. Production and/or shipments data, by product class, will also be found in many of the Current Industrial Reports.

In the following table, the comparability (convertibility) between the product classes for 1967 and 1963 is shown only for those 1963 classes which were revised in some way between the two years. As noted, a few revisions were made in 1965 with no revision in the 4-digit industry level. Some of these 1965 changes were continued into 1967. However, a few of the 1965 changes were subjected to further revision in 1967; such changes are not shown in the table.

The table should be interpreted as follows:

1. Where a single code in 1967 is shown as equivalent to a single code in 1963 (for example, 1967 code 35196 equivalent to 1963 code 35193), the revision involved a simple recoding of the product class with no change in product coverage. This situation resulted from a reordering of product classes within an industry or was necessitated by a revision in the Standard Industrial Classification (SIC) between 1963 and 1967.

2. Where one class is shown for 1967 and two or more classes are shown for 1963, the one class is equal to the two or more classes in product coverage; for example, 1967 code 22710 is equivalent to the two 1963 codes 22711 and 22712. The reverse is also true; for example, 1967 codes 22823 and 22824 are equivalent to 1963 code 22821. In these situations, the 1967 code 22710 resulted from a combination of the 1963 codes 22711 and 22712, and the 1967 codes 22823 and 22824 resulted from a splitting of 1963 code 22821.

3. Where several classes in 1967 are shown as equivalent to several classes in 1963, all classes in 1967 taken together are equivalent to all classes in 1963 taken together.

Appendix H

ALPHABETIC INDEX OF MANUFACTURED PRODUCTS

This index is intended to assist in locating statistics on manufactured products in table 6A, "Products and Product Classes—Quantity and Value of Shipments by All Producers: 1967 and 1963," in the industry chapters. Table 6A presents data not only for some 5,500 products reported in the 1967 census but for 5,000 additional products covered in the Current Industrial Reports series of commodity surveys, for which only summary totals were called for in the census of manufactures.

The product information in table 6A of any industry chapter is for products primary to the industries covered in that chapter; such products are coded, in the first four of their seven digits, to the industry code of their primary industry. Thus, pistols and revolvers, product code 1951232, are primary to industry 1951, Small Arms. The product statistics for the 7-digit code will be found in table 6A in chapter 19A, which includes industry 1951.

In this index the products, alphabetized and coded to their first five digits, are typically described in broad terms; more detail by size, material composition, end-use, etc., will be found in table 6A. To assist in locating product statistics, the index includes cross references or alternate ways of describing products.

Statistics on products are contained in tables other than 6A but no references to such other tables are given here. For example, summary product information at the industry (4-digit) level may be found in tables 5A and at the product class (5-digit) level in table 5B. Product class specialization general statistics may be found in table 8. In a few chapters, detailed product information is contained in tables in the table 6 series, in addition to table 6A.

This volume contains 80 chapters. Each chapter presents statistics, including product statistics, for several 4-digit industries. For each chapter, the paging commences with the 2-digit SIC major group number followed by a letter. Within that chapter, the individual pages are numbered sequentially. (For instance, the chapter on dairy products, covering industries 2021 to 2026, is numbered 20B.) Table AA, Product Finding Guide, gives a listing of each of the 80 chapters together with the industry codes included.

To use the alphabetic index in this appendix--

1. Find the product in the index.
2. Note the first four digits of its 5-digit code,
3. Locate the 4-digit code in table AA, and
4. Turn to table 6A in the chapter indicated.

For example, the product, "butter, creamery", will be found in the alphabetic index coded 20210. Referring to table AA, it will be noted that industry code 2021 is included in chapter 20B. In chapter 20B, table 6A will be found commencing on page 20B-14, with statistics for butter.
